

CONSUMER PRICE INDEX
(BASE PERIOD NOVEMBER 2009 = 100)

NATIONAL BUREAU OF STATISTICS

No. 527
February 2014

BRIEF METHODOLOGY:

The CPI measures the average change over time in prices of goods and services consumed by people for day-to-day living. The construction of the CPI combines economic theory, sampling and other statistical techniques using data from other surveys to produce a weighted measure of average price changes in the Nigerian economy. The weighting occurs to capture the importance of the selected commodities in the entire index. The production of the CPI requires skills of economists, statisticians, computer scientists, data collectors and others.

Key in the construction of the price index is the selection of the market basket of goods and services. Every month, 10,534 informants spread across the country provide price data for the computation of the CPI. The market items currently comprise of 740 goods and services regularly priced.

The first stage in the calculation of the CPI is the collection of prices on each item (740 goods and services) from outlets in each sector (rural or urban) for each state. Prices are then averaged for each item according to sector across the state. The next step is to use the average price to calculate the basic index for each commodity: The current year price of each commodity is compared with a base year's price to obtain a relative price.

Next we use the Laspeyres formula to compute an aggregated index for each class (which has a multitude of commodities which have similar consumption purposes): Here the sum of the product of weights

(obtained from the expenditure survey) and relative prices for each item is divided by the sum of the weight of the items in that class, and the result multiplied by 100 gives the required index number. This index number is still classified according to the urban or rural classification sector for each of the 36 states and the FCT. This yields 85 classes then 48 groups which are then reclassified into 12 Divisions to derive:

1. The country composite index
2. The Urban National index
3. The Rural National index
4. The Combined Urban and Rural State Composite index

The survey methodology generates 3774 all items indices for all states and the FCT.

This edition of the Statistical News contains the revised Consumer Price Index (CPI) based on Nigeria Living Standard Survey (NLSS) 2003/2004. The consumption expenditure data were re-valued to November 2009, which is the base period for the revised CPI.

The May 2003 and September 1985 based indices are being continued using factors derived from the new CPI. All of these indices will yield the same price change for any commodity group contained in all the series. A new sub index – Imported Food Index- is available in the revised CPI.

Note: The urban and rural indices were weighted with the ratio of their populations to the national i.e. 0.455 and 0.545 respectively to compute the composite indices at the 12 COICOP functions and all items

levels. This may cause variance between a recalculated all items index using the weights published on table 2 and the published all items index because the published weights

were computed only from consumption expenditure survey result. The following breakdown highlights a non-exhaustive list of the components of the current CPI:

FOOD AND NON ALCOHOLIC BEVERAGES

Food

Bread and cereals

Meat

Fish

Milk, cheese and eggs

Oils and fats

Fruit

Vegetables

Potatoes, Yam & other tubers

Food products n.e.c

Coffee, tea and cocoa

Soft drinks

ALCOHOLIC BEVERAGES, TOBACCO AND KOLA

Spirits

Wine

Tobacco

Narcotics

CLOTHING AND FOOTWEAR

Clothing materials, other articles of clothing

Garments

Cleaning, repair and hire of clothing

Shoes and other footwear

Repair and hire of footwear

HOUSING, WATER, ELECTRICITY, GAS

Actual and imputed rentals for housing

Water supply

Miscellaneous services relating to the dwelling

Electricity

Gas

Liquid fuel

Solid fuels

FURNISHINGS, HOUSEHOLD EQUIPMENT

Furniture and furnishings

Carpets and other floor coverings

Repair of Furniture

Household textiles

Major household appliances whether electric or not

Repair of household appliances

Glassware, tableware and household utensils
Non-durable household goods
Domestic services and household services
HEALTH
Pharmaceutical products
Medical services
Dental services
Paramedical services
Hospital services
TRANSPORT
Motor cars
Motor cycles
Bicycles
Vehicle spare parts
Fuels and lubricants for personal transportation
Maintenance and repair of personal transport
Passenger transport by road
Passenger transport by air
Passenger transport by sea and inland waterways
COMMUNICATION
Postal services
Telephone and telefax equipment
Telephone and telefax services
RECREATION AND CULTURE
Audio-visual, photographic and information processing equipments
Photographic development
Musical instrument
Recreational and sporting services
Games of chance
EDUCATION
Books & stationery
RESTAURANTS AND HOTELS
Catering services
Accommodation services
MISCELLANEOUS GOODS AND SERVICES
Hairdressing salons and personal grooming establishments
Appliances, articles and products for personal care
Jewellery, clocks and watches
Insurance
Other services.

ALL ITEMS INDEX

In February, the Consumer Price Index (CPI) which measures inflation, rose by 7.7 percent year-on-year. The moderation in year-on-year rates in February was as a result of higher year-on-year changes exhibited in February 2013. During this period, prices increased by 0.75 percent on a monthly basis (the second highest price increase observed during the year) compared to a moderated increase in the month-on-month rate of change of 0.5 percent observed in February 2014.

Food prices also rose at a relatively slower rate in February 2014. Food prices, as observed in the Food sub-index, rose by 9.2 percent year-on-year. Prices of yams, potatoes and other tubers; vegetables and fruits increased at slower rate in February, while prices of bread and cereals rose at a faster rate during the period. The price of meat products grew at the same rate year-on-year compared with January 2014.

After a brief respite in January 2014, prices in the core sub-index increased at a faster rate in February. Prices rose by 7.2 percent year-on-year, higher than the price increase recorded in January by 0.6 percentage points.

It should be noted that the Headline Index is made up of the Core Index and Farm Produce items. As Processed Foods are included in both the Core and Food sub-indices, this implies that these sub-indices are not mutually-exclusive.

On a monthly basis, prices increased at a slower rate for the second consecutive month, increasing by 0.5 percent in February, marginally lower than the 0.64 percent increase recorded in January.

COMPOSITION OF THE MAJOR INDEX AND SUB-INDICES

All Items = Farm Produce + Core index

Food = Farm Produce + Processed Foods

Core = All Items – Farm Produce

After a slight increase in January (year-on-year) urban price increases moderated as indicated by the Urban composite CPI. The index was recorded at 153.0 points in February, a 7.8 percent increase from levels recorded in February 2013. The price increase was lower than rates recorded in January by 0.4 percentage points. The corresponding Rural National CPI recorded a 7.7 per cent year-on-year change in February 2014, easing marginally from the rate recorded in January (7.8 percent).

On a monthly basis, price increases in the Urban All-items index eased for the second consecutive month in February, increasing by 0.5 per cent. The Rural All Items index further slowed in a similar fashion increasing by 0.49 in February, down from 0.68 percent recorded in January. The percentage change in the average Composite CPI for the twelve-month period ending in February 2014 over the average of the CPI for the previous twelve-month period was recorded at 8.3 percent, marginally lower from the 8.4 percent average twelve month rate of change recorded in January 2014. The corresponding 12-month year-on-year average percentage change for the Urban index was 8.5 percent, while the corresponding Rural index was recorded at 8.1 percent. Both were lower from the previous twelve month rates of change by 0.2 percentage points.

FOOD INDEX

Food prices increased at a marginally lower rate of 9.2 percent in February 2014, after increasing at a steady rate over the previous three months at 9.3 percent (year-on-year).

On a month-on-month basis, the rate of increase of the Food sub-index eased for the second consecutive month in February, rising by 0.6 percent in February, down from the 0.8 percent increase recorded in January.

On a month-on-month basis, the highest price increases were recorded in the Breads and Cereals, Oils and fats and vegetable classes.

The average annual rate of rise of the Food sub-index for the twelve-month period ending in February 2014 was 9.5 percent, marginally lower from the 9.6 percent recorded for the average of the 12 month period ending in January 2014.

ALL ITEMS LESS FARM PRODUCE

The “All items less Farm Produce” or Core index, which excludes the prices of volatile agricultural products increased at a faster rate (year-on-year) in February 2014 when compared with January 2014. Prices increased by 7.2 percent, higher by 0.6 percentage points from the 6.6 percent rate recorded in January.

On a month-on-month basis, prices also picked up in February, increasing by 0.5 percent. This was 0.3 percentage points higher than the 0.2 percent rate recorded in

January. On a month-on-month basis, the increase in the Core sub-index was as a result of price increases across various class items in particular; *Appliances, articles and products for personal care, Repair of household appliances, and Motor cars*. The average 12 month annual rate of rise of the index was recorded at 7.0 percent for the twelve-month period ending in February 2014, down by 0.3 percentage points from 7.3 per cent recorded in January 2014, and maintaining its year-long downward trend.
