Highlights of Unemployment and Underemployment in Q3 2016	6
Unemployment and Underemployment by Age Group	9
Unemployment and Underemployment by Gender	11
Urban and Rural Unemployment and Underemployment	12
Country Comparison of Unemployment.....	13

BRIEF METHODOLOGY

In computing the unemployment rate, the total population is divided into labour force (currently active) and non-labour force (not currently active). **The labour force population covers all persons aged 15 to 64 years who are willing and able to work regardless of whether they have a job or not. The definition of unemployment therefore covers persons (aged 15–64) who during the reference period were currently available for work, actively seeking for work but were without work.** A person is regarded as **employed if he/she is engaged in the production of goods and services, thereby contributing to the Gross Domestic Product (GDP) in a legitimate manner, which is a component of the national accounts and receives any form or amount of compensation for that activity.** The category of persons considered **not in the labour force include those not between 15-64(economic active population) as well as those within the economically active population i.e 15-64, who are unable to work, not actively seeking for work or choose not to work and/or are not available for work, which are the economically inactive.** Examples of these are voluntary full time housewives, underage children 14 and below, adults above 65, full time students, those in active military service, physically challenged and incapacitated persons whose incapacitation prevents them from working. Growth in the labour force therefore fluctuates and depends on the decisions by constituents of the economically activate population on whether to work or not which varies across different cultures, religion, as well as various academic, economic and family considerations. For example, a housewife might decide to take up employment to supplement the family income due to changes in the husband's salary or due to added family needs, or a person might decide to take some time off work to either study for Master's program or to recover from ill health. Any of these can cause fluctuations in the economically active and labour force population at any given time.

Figure 1: Basic Building Blocks of the Labour Force Population

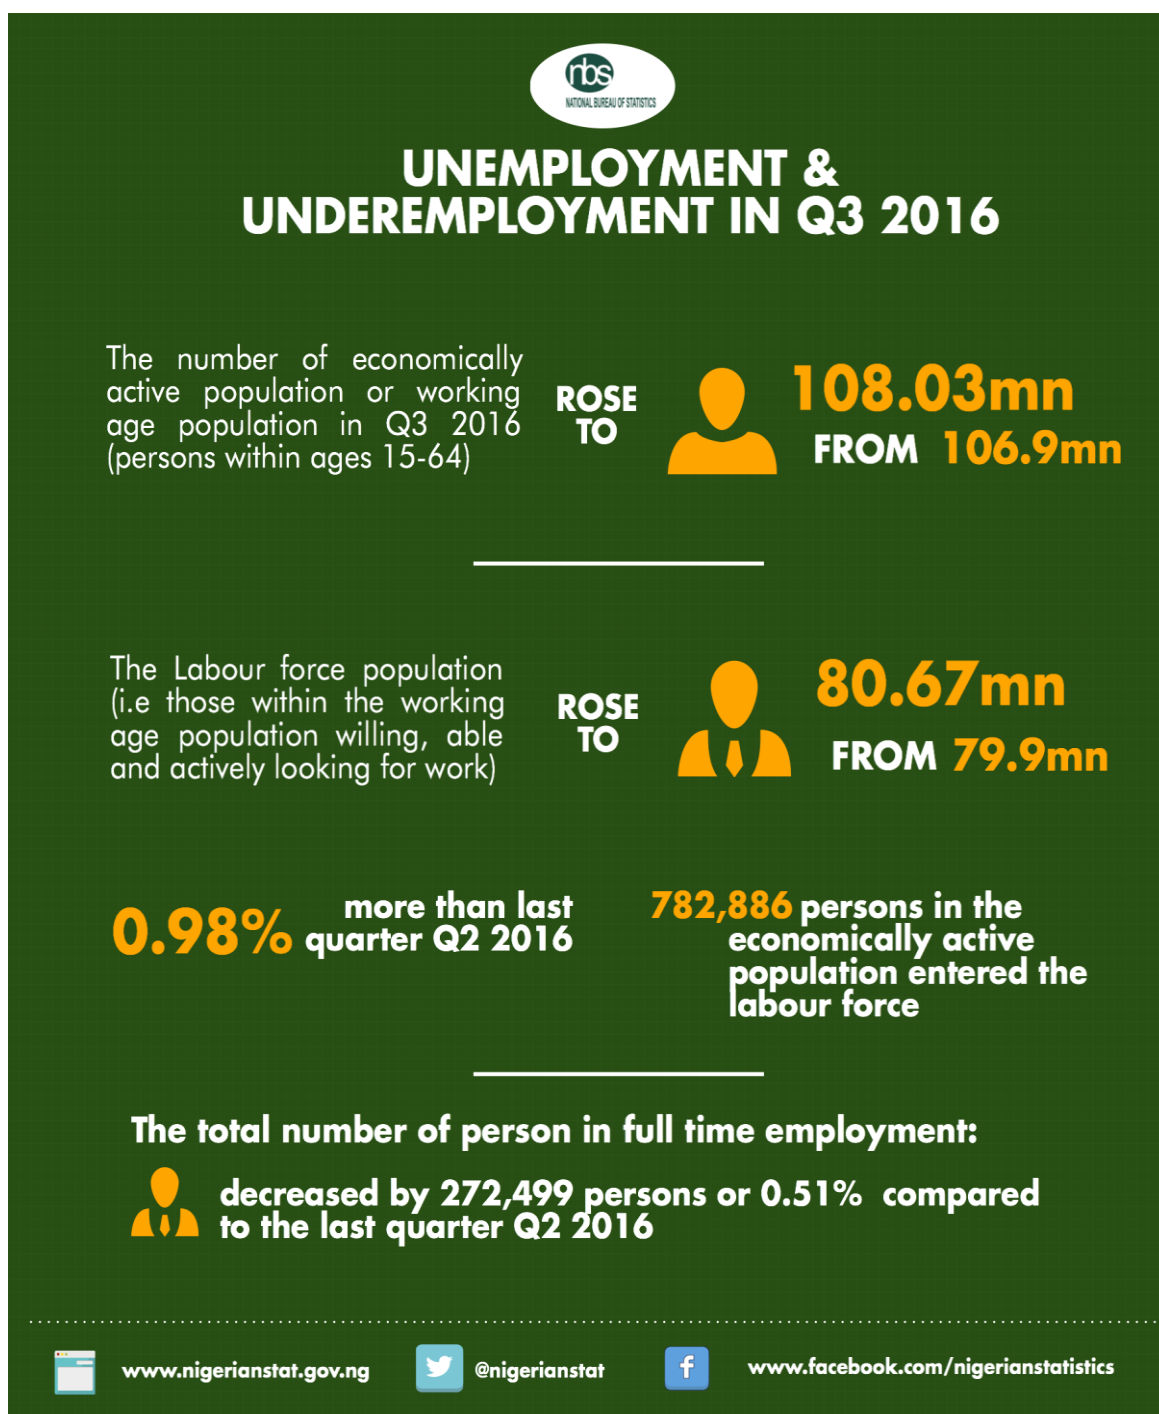

There is no universal standard definition of unemployment as various countries adopt definitions to suit their local priorities. Virtually all countries however use the International Labour Organization (ILO) definition, or a variant of it to compute unemployment. The ILO definition covers persons aged 15–64 who during the reference period (which is usually the week preceding the time the survey is administered) were available for work, actively seeking work, but were unable to find work.

The Nigerian National Bureau of Statistics like most countries in the world uses a variant of the ILO definition such that the unemployment is the proportion of those in the labour force (not in the entire economic active population, nor the entire Nigerian population) who were actively looking for work but could not find work for at least 20 hours during the reference period to the total currently active (labour force) population. Accordingly, you are unemployed if you did absolutely nothing at all or did something but for less than 20 hours during the reference week. Underemployment however occurs if you work less than full time hours, which is 40 hours, but work at least 20 hours on average a week and /or if you work full time but are engaged in an activity that

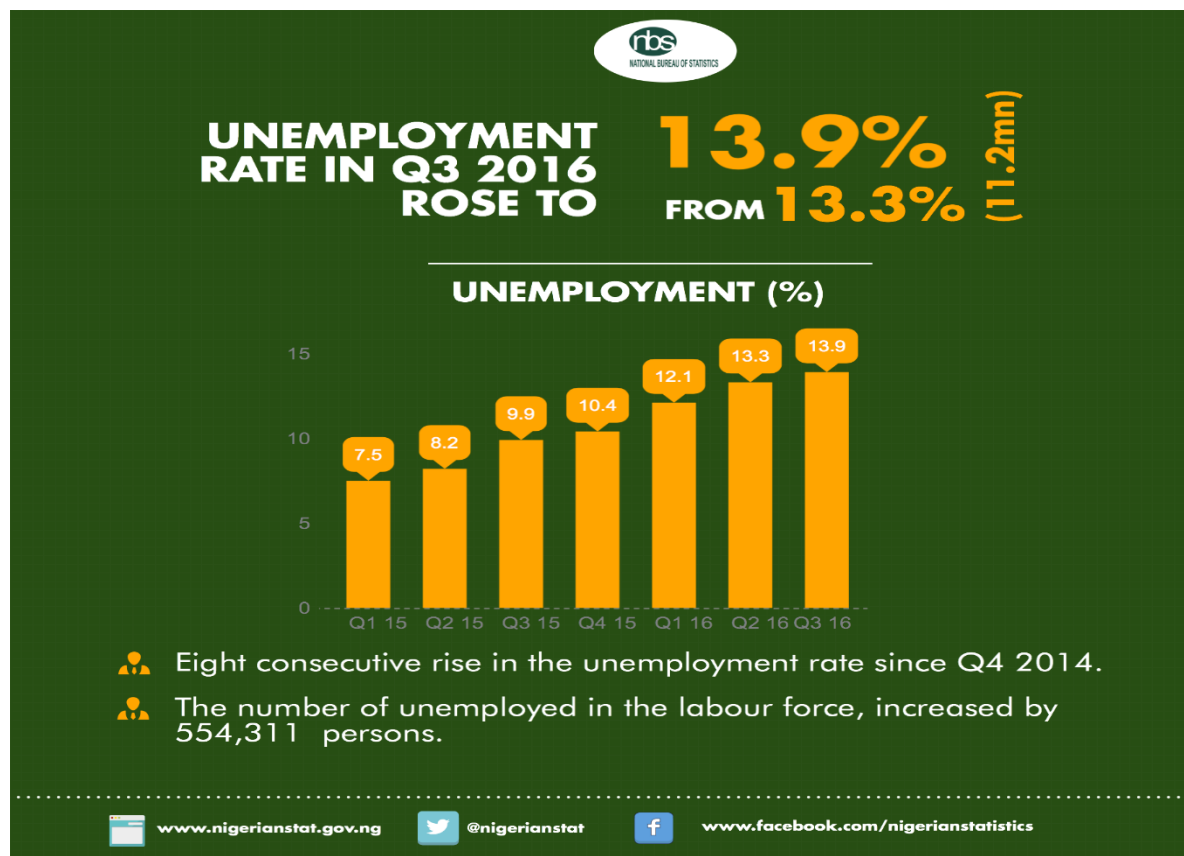

underutilizes your skills, time and educational qualifications. Consequently, rural farmers only farming seasonally will be considered underemployed if they only work on their farms during the planting and harvests period and do nothing in between. If farmers are however working in dry and wet seasons as is increasingly becoming the case, they will then be involved in full time employment. This applies to drivers, cooks, cleaners, bankers, teachers etc who in most case work well over 40 hours and hence are considered full time employed as their working hours and skills meet the adopted methodology. It is important to note that the **international definition of unemployment, underemployment or employment is not a function of the quantity/suitability of wages earned nor it is a function of job satisfaction.** Rather employment, underemployment and unemployment are treated as a function of a person's involvement or otherwise in economic activity even if that activity is performed solely to make ends meet and not for satisfaction or enjoyment. The suitability of wages or job fulfilment is covered under other indices such as the living standard, poverty rate or happiness index, but not in determining whether one is employed, unemployed or underemployed, which is a function of economic engagement.

Highlights of Unemployment and Underemployment in Q3 2016

The economically active population or working age population (persons within ages 15 and 64) increased from 106.69 million in Q2 2016 to 108.03 million, this represents a 1.26% increase over the previous quarter and a 3.57% increase when compared to Q3 2015.

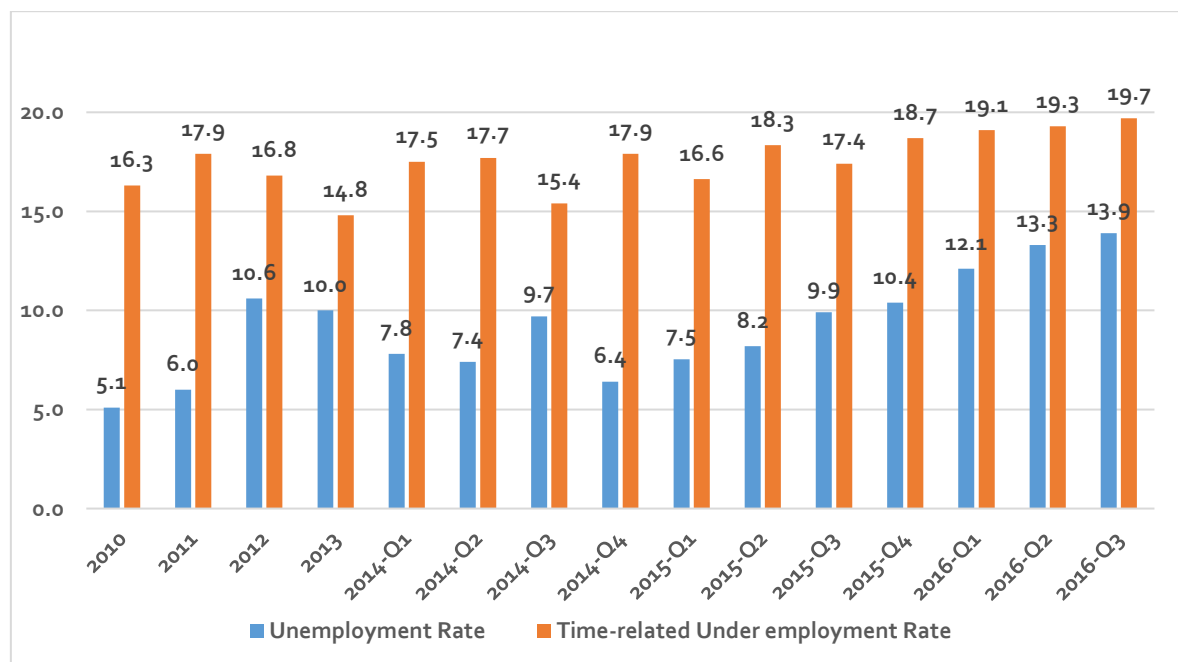

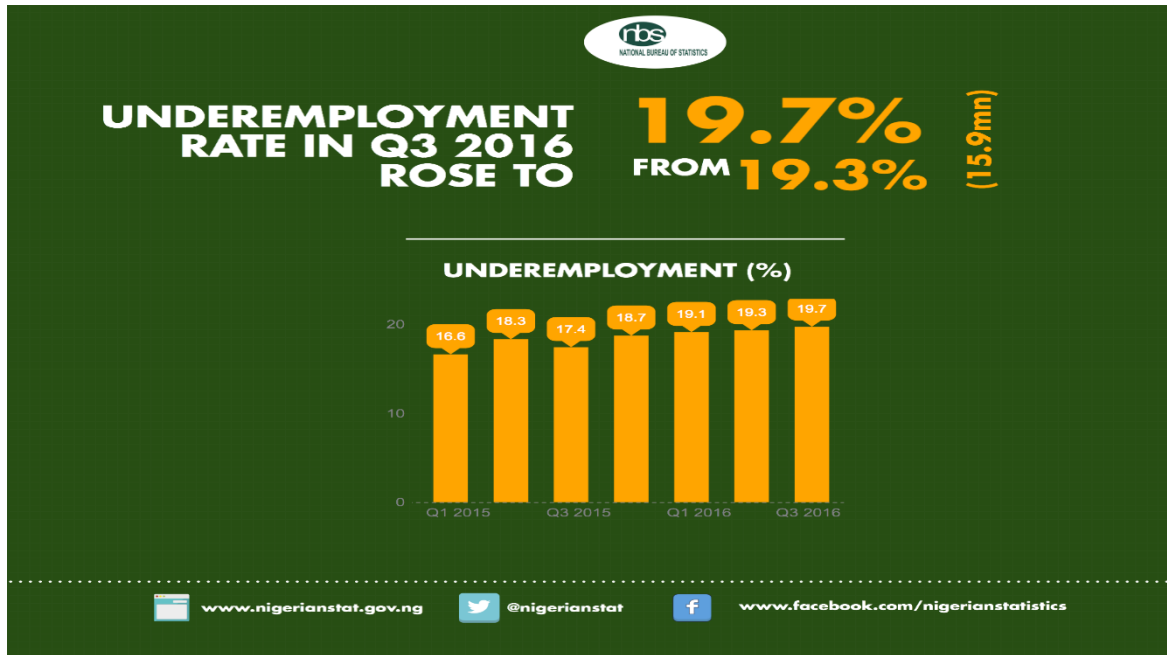

In Q3 2016, the labour force population (i.e those within the working age population willing, able and actively looking for work) increased to **80.67 million** from **79.9 million** in Q2 2016, representing an increase of 0.98% in the labour force during the quarter. This means about 782,886 persons from the economically active population entered the labour force, that is individuals that were able, willing and actively looking for work. This magnitude of increase between Q2 and Q3 2016 is smaller when compared to Q1 and Q2 2016, which was an increase of 1.39m in the Labour force population. Within the reference period, the total number of person in full time employment (**did any form of work for at least 40hours**) decreased by 272,499 or 0.51% when compared to the previous quarter, and decreased by 1.66million or 3.01% when compared to Q3 of 2015. With an economically active or working age population of **108.03 million** and labour force population of **80.67 million**, it means **27.36million** persons within the economically active or working age population decided not to work for one reason or the other in Q3 2016, hence were not part of the labour force and cannot be considered unemployed.

The number of underemployed in the labour force (those working but doing menial jobs not commensurate with their qualifications or those not engaged in fulltime work and merely working for few hours) increased by 501,074 or 3.25%, resulting in an increase in the underemployment rate from 19.3 % in Q2 2016 to 19.7% (15.9 million persons) in Q3 2016. This is a marginal increase of 0.4 percentage points between quarters 2 and 3 of 2016, and shows a steady rise in the rate since Q3 of 2015. During the reference period, the number of unemployed in the labour force, increased by 554,311 persons, resulting in an increase in the national unemployment rate to 13.9% in Q3 2016 from 13.3% in Q2, 12.1% in Q1 2016, 10.4% in Q4 2015 and 9.9% in Q3 2015. Accordingly, there were a total of 27.12 million persons in the Nigerian labour force in Q3 2016, that were either unemployed or underemployed compared to 26.06million in Q2 and 24.5 million in Q1 2016.

Figure 2: Unemployment and Underemployment Rates (2010 - Q3, 2016)

Unemployment and Underemployment by Age Group

As continues to be the case, unemployment and underemployment was highest for persons in the labour force between the ages of 15-24 and 25-34, which represents the youth population in the labour force. The **unemployment rate** was highest for those within the **ages of 15-24 (25.0% in Q3 2016, 24.0% in Q2, 21.5% in Q1, 19.0% in Q4 2015 and 17.8% in Q3 2015)**, while the **underemployment rate** for the same age group declined slightly to **34.9% in Q3, 2016 from 34.2% in Q2 2016, 34.6 in Q1 2016, 34.5% in Q4 2015 and 31.8% in Q3 2015**. For the **25-34 age group**, the **unemployment rate** also increased from **14.5% in Q2 2016 to 15.0% in Q3, 2016, up from 12.9% in Q1 2016, 11.4% in Q4 and 10.8% in Q3 2015**. The **underemployment rate** rose to **20.8% in Q3, 2016, up slightly from 20.5% in Q2, 19.9% in Q1, 19.9% in Q4, 2015 and 18.5% in Q3 2015**.

YOUTH UNEMPLOYMENT AND UNDEREMPLOYMENT IN Q3 2016

45.65%

OF YOUTH LABOUR FORCE POPULATION UNEMPLOYED OR UNDEREMPLOYED IN Q3

18.3 million of the youth labour force population of 40.16 million were unemployed or underemployed.

59.9% of Nigerians in the labour force aged 15–24 years were either unemployed or underemployed in Q3 2016 compared to 58.3% in Q2 2016.

35.9% of Nigerians in the labour force aged 25–34 years were either unemployed or underemployed in Q3 2016 compared to 35.1% in Q2 2016.

Figure 3: Unemployment and Under-employment Rate by Age-Group (Q3, 2016)

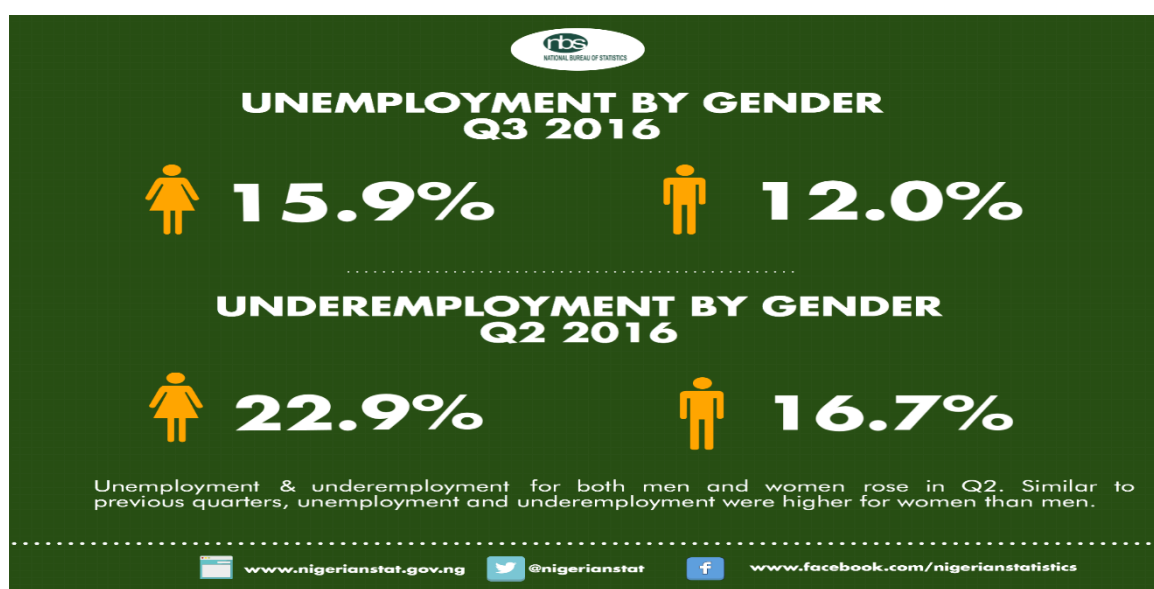

Accordingly, **59.9%** of Nigerians in the labour force (**not entire population**), aged 15-24 were either unemployed or underemployed in Q3, 2016, compared to 58.3% in Q2 2016, 56.1% in Q1 2016, 53.5% in Q4 2015 and 49.6% in Q3 2015. Of persons aged between **ages of 25 and 34**, a total of **35.9%** of that group were either unemployed or underemployed in Q3, 2016 compared to 35.1% in Q2, 32.8% in Q1, 31.3% in Q4 2015 and 29.3% in Q3, 2015. Consequently, out of a total youth labour force population of 40.16million (representing 49.7% of total labour force in Nigeria of 80.67 million), a total of **18.3million of them were either unemployed or underemployed in Q3 2016. This represents and combined youth unemployment and underemployment rate of 45.65% in Q3 2016 from 44.52% in Q2 2016 and 40.30% in Q1 2016.** (Important to note that there is a **technical distinction between not working and unemployed**. A youth may not be working but may not necessarily be unemployed. A youth not working will only be termed unemployed if he is willing and able to work and actively looking for work within the review period. It is also important to note **distinction between unemployed and underemployed**. You are unemployed if you do nothing at all and underemployed if you still manage to do something for some money for at least 20 hours a week but is menial and not fully engaging relative to your skills, time and qualifications)

Unemployment and Underemployment by Gender

As was the case in previous quarters, **unemployment and underemployment was higher for women than men in Q3 2016.** While 15.9% of women in the labour force (those between 15-65 willing, able and actively working or searching for work) were unemployed in Q3 2016, a further 22.9% of women in the labour force were underemployed in Q3 2016. On the other hand, 12.0% of males were unemployed in Q3 2016, while a further 16.7% of males in the labour force were underemployed during the same period.

Figure 4: Unemployment and Under-employment Rate by Gender (Q3, 2016)

Urban and Rural Unemployment and Underemployment

Underemployment continues to be predominant in rural areas, 24.4% of rural residents were underemployed compared to 9.8% urban of residents. Given that the nature of rural jobs is largely menial and unskilled, such as in agriculture and the likes, unemployment is more of a concern in urban areas where more skilled labour is required. The unemployment rate in the urban areas was 18.3% compared to 11.8% in the rural areas, as the preference is more for formal white collar jobs, which are located mostly in urban centres.

URBAN VS RURAL 2016 Q3

UNEMPLOYMENT

- Unemployment higher in urban areas given the preference of graduates for formal white collar jobs located mostly in urban centres.

UNDEREMPLOYMENT

- Underemployment higher in rural areas given the seasonal nature of farmers' jobs.

Country Comparison of Unemployment

The IMF Global growth forecast is projected to slow to 3.1 percent in 2016 before recovering to 3.4 percent in 2017. This forecast, revised down by 0.1 percentage point for 2016 and 2017 reflects a more subdued outlook for advanced economies following the June U.K. vote in favour of leaving the European Union (Brexit) and weaker-than-expected growth in the United States. These developments have put further downward pressure on global interest rates, as monetary policy is now expected to remain accommodative for longer. Although the market reaction to the Brexit shock and the US presidential elections was reassuringly orderly, the ultimate impact remains very unclear, as the fate of institutional and trade arrangements between the United Kingdom and the European Union, and the United States and its partners is uncertain. This uncertainty also has its own bearing on the labour markets, as the employment outlook has now weakened in both emerging and developing economies.

The highest unemployment rate in the world is recorded in Djibouti (54%), Congo (46.1%), Bosnia and Herzegovinian (41.3%), Afghanistan (40%) and Kenya (40%) while the lowest are found in Qatar (0.2%), Cambodia (0.5%), Belarus (1%), Benin (1.0%), Thailand (1.2%), Madagascar (1.2%) Laos (1.4%) and Guinea (1.7%).
