## STATISTICAL REPORT ON WOMEN AND MEN IN NIGERIA

# TABLE OF CONTENTS

TABLE OF CONTENTS.....	ii
PREFACE.....	v
EXECUTIVE SUMMARY.....	vi
LIST OF TABLES.....	viii
LIST OF FIGURES.....	ix
LIST OF ACRONYMS.....	x
<b>CHAPTER 1: POPULATION.....</b>	<b>1</b>
Key Findings.....	1
Introduction.....	1
A. General Population Patterns.....	1
1. Population and Growth Rate.....	1
2. Population Distribution by Sex.....	2
3. Fertility.....	2
4. Aging.....	3
5. Migration.....	4
<b>CHAPTER 2: HEALTH.....</b>	<b>5</b>
Key Findings.....	5
Introduction.....	5
A. Life Expectancy.....	5
B. Morbidity.....	6
C. Births and Deaths.....	8
A. Reproductive Health.....	9
1. Prenatal and Delivery Care.....	9
2. Maternal Mortality.....	9
3. Infant and Under Five Mortality.....	9
4. Contraceptive Use.....	10
5. Immunization.....	10
<b>CHAPTER 3: EDUCATION.....</b>	<b>11</b>
Key Findings.....	11
Introduction.....	11
A. Educational outcomes.....	11
1. Literacy.....	11

2. Adult literacy .....	11
B. Participation in Education.....	12
1. Enrolment in Primary Education.....	12
2. Secondary Education.....	13
3. Tertiary Education.....	14
C. Teaching Staff.....	15
<b>CHAPTER 4: WORK.....</b>	<b>17</b>
Key Findings.....	17
Introduction.....	17
A. Women and Men in Labour Force .....	18
1. Labour Force Participation of Women and Men Age 15-64 Years .....	18
2. Women and Men in Federal and State Civil Service .....	19
<b>CHAPTER 5: POWER AND DECISION MAKING .....</b>	<b>21</b>
Key Findings.....	21
Introduction .....	21
A. Politics and Governance.....	21
1. Representation in National Parliament.....	21
2. Representation at State Houses of Assembly .....	23
3. Representation at the Local Government .....	23
4. Representation in the Judiciary .....	24
5. Representation in Civil Service.....	25
<b>CHAPTER 6: VIOLENCE AGAINST WOMEN .....</b>	<b>27</b>
Key Findings .....	27
Introduction .....	27
A. Prevalence and Incidence of Violence Against Women.....	27
1. Physical And Sexual Violence Against Women .....	27
2. Female Genital Mutilation .....	29
B. Prison inmates/offenders .....	30
C. Trafficking in Persons .....	31
<b>ANNEXES .....</b>	<b>33</b>

## PREFACE

As the apex statistical agency in Nigeria, the National Bureau of Statistics occupies a unique position as national repository of statistical information on social and economic phenomenon. The profiles of women and men and their status in the country have been carefully and systematically collected, compiled, processed and analysed, thus, providing authoritative basis for sound policy making at all levels-national, state and local. The Beijing Platform for action – the pre-eminent international guideline for improving the status of women identified twelve critical areas of concern that required empowerment of women towards achieving full equality of the sexes. The concerns include *poverty, education, health, gender-based violence, armed conflict, economic participation, inequality in power and decision making*. Others are *lack of advancement opportunities, human rights, women and the media, natural resources and the environment* as well as *issues around the girl child*. These strategic concerns were associated with *monitoring indicators* which underscored the need for information on women and men. The platform for Action, also specially, requires governments to *generate* and *disseminate* sex-disaggregated data and information for planning and evaluation as part of institutional mechanism to advance women (BPA, 1995; Strategic Objective A1, A4 and A3).

The conceptual approach of the *Statistical Report on Women and Men in Nigeria* is in line with those published since 2008-to present and analyse available data on the status of women and men. It further highlights the differences between the status of women and men in various areas of contemporary life in Nigeria; it compares the statistics on women with that of men. In this edition of the report, six key areas are covered and include population, health, education, work, power and decision making, and violence against women amongst other crimes. In each of these thematic areas, statistics from secondary and primary sources were carefully identified, compiled, processed and analysed, bringing to the fore, findings on the differences between the status of girls and boys as well as women and men.

Efforts were made to make these findings easy to interpret with the extensive use of graphical presentation and non-technical language. Further efforts are being made to see that all our *survey instruments* are mainstreamed with gender issues such that more gender profiles emerge from non-traditional gender sectors, especially the economic sectors. I have no doubt that our numerous users will benefit from this edition of the *Statistical Report on Women and Men in Nigeria* as they begin to focus their gender-based interventions more effectively.

It is my hope that the present publication will be used by Policy makers, implementers from government agencies, civil societies and development partners to advance an enabling social and economic environment that will ensure equal treatment of all women and men and significantly improve the status of women in Nigeria.

**Dr. Yemi Kale**  
**Statistician-General of the Federation/Chief Executive Officer**  
**National Bureau of Statistics**

# EXECUTIVE SUMMARY

## 1. Introduction

In the 1995 Beijing Declaration adopted at the fourth World Conference on Women, participating Governments expressed their commitments “to advance the goals of equality, development and peace for all women everywhere in the interest of humanity”. To assess whether these goals are being achieved, the *Statistical Report on Women and Men in Nigeria* is produced annually by the National Bureau of Statistics, as required in the Beijing Platform for Action.

The 2015 edition of the Report presents statistical analysis on the status of Women and Men in Nigeria. It highlights the current situation of women and men and the changes observed overtime. The analysis are based on statistics from selected Federal and State MDAs. The report covers six broad policy areas – population, education, work, power and decision making and violence against women and other crimes. Available statistics have been updated up to 2015.

## 2. Concepts and Methods

The concepts and methods used in this edition of the Report are the same as those used in the previous publications. Data was sourced from selected State and Federal MDAs including but not limited to Ministry of Health, Ministry of Education, State’s Colleges of Education, Polytechnics and Universities, National Commission on Colleges of Education as well as published sources such as NBS Quarterly Labour Force Survey (LFS), NPopC’s Demographic Health Survey (DHS), NBS/MDGs Performance Tracking survey and MICS4. For some indicators, statistics are provided on geo-political zones as well as rural and urban residences. A summary of key indicators are provided below each thematic area.

## 3. Population

In 2015, Nigeria’s population was projected at 183 million people, of which, 90,989,254 are females and 92,387,474 are males. The total number of older people, that is, those who have reached the age of 60 years increased slightly from 6,987,147 in 2006 to 6,987,232 in 2015. Within the period under review, the sex ratio was 102 men per 100 women. In line with current trend, total fertility rate (TFR), remained the same at 5.5 births per woman, that is, 5,500 births per 1000 women while the total number of internal migrants remained as estimated at 11,257 (NPopC, 2010).

## 4. Health

The national *life expectancy* for women was 56 years and for men 53 years (NBS, 2013). Overall, women appear to live longer than men in all the states. However, among reported cases of diseases, *HIV/AIDS* affected females most. On the average, the disease accounted for 58.6 percent of female deaths and 41.4 percent of male deaths in the period 2010-2015 (Table 3). *Malaria* was the second leading disease for both men and women infecting, on the average, 54.8 percent females and 45.2 percent males within the same period. South west zone had the highest proportion of females who made 4 or more antenatal care visits, 84.5 percent compared to North West, 32.9 percent (Table 4). *Infant mortality rates* declined from 61 deaths per 1000 life birth in 2012 to 54 deaths per thousand life births in 2014 according to the result of the NBS/MDGs Performance Tracking Survey.

## **5. Education**

Primary school enrolment in most states in the country increased according to available data from States' Ministries of Education. The proportion of girls' enrolled in primary school increased from 45.7 percent in 2010 to 48.6 percent in 2015. Completion rate for girls in primary and secondary schools increased from 46.7 percent and 47.1 percent in 2010 to 48.3 percent and 47.9 percent respectively in 2015. Secondary schools enrolment for boys and girls is on the increase. The proportion of girls enrolled in secondary school increased slightly from 45.3 percent in 2010 to 45.7 percent in 2015. However, enrolment into tertiary institutions across the country appeared male dominated on the average. At the primary level of education, women teachers constituted the highest proportion decreasing at higher levels of education. Women constitute about 25 percent of teaching staff at the tertiary level of education.

## **6. Work**

In 2015, the national labour force participation rate of women and men in the ages 15-64 years was 74.7 percent. The proportion of men was 82.6 percent while women accounted for 78.4 percent. Like in 2013, men constituted the bulk of employment in federal and state MDAs. For the period, 2010-2015, on the average, 72.3 percent of senior positions in State Civil Service were occupied by men compared to 27.7 percent occupied by women.

## **7. Power and Decision Making**

About half of the population of Nigeria are women with right to vote and hold public offices in almost all states of the federation. However, women continued to be under-represented at the national, state and local government levels. At the national parliament in 2015, 94.3 percent of seats were occupied by men compared to 5.7 percent occupied by women. At the state and local government levels, women seem not to appear in the power equation. However, men dominate the judiciary at the state level. Among high-ranking government administrators with decision making powers, women were equally under-represented.

## **8. Violence Against Women**

Physical and sexual violence against women affects mostly females in the age bracket 20-24 years. However, in the absence of newer data, the available statistics (NDHS 2013) estimated females in the age bracket 15-19 years, to have experienced female genital cutting the most. Between 2008 and 2013, 89.9 percent on the average of women and girls' in the ages 15-19 years experienced genital cutting at ages under 5 years. In the period under review, the proportion of women in prison was 1.9 percent, on the average. More females were trafficked in the period 2010-2015 with the proportion of females trafficked for prostitution as high as 70.8 percent for persons in ages 18-27 years in 2015.

# CHAPTER 1: POPULATION

## Key Findings

- In 2015, Nigeria population is projected at 183 million people
- Women constitute 49.5 percent and men 50.5 percent of the population
- Population growth rate is 3.28 percent per annum
- Sex ratio dropped from 103 men in 2006 to 102 men per 100 women in 2015
- Total Fertility Rate (TFR) is estimated at 5.4 births per woman

## Introduction

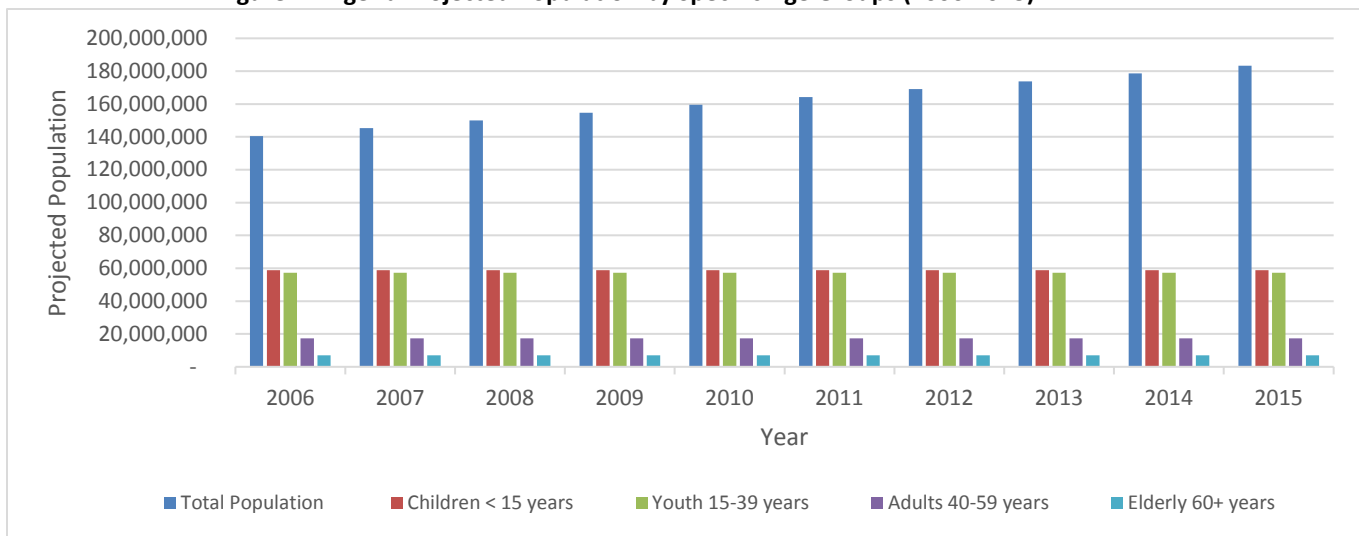

There is no doubt that population size and population growth patterns directly affect the living conditions of every human in the world. This chapter highlights some dynamic demographic indicators and elaborate on the pattern of the population of men and women by specific age groups.

### A. General Population Patterns

#### 1. Population and Growth Rate

The population of Nigeria has been growing steadily at an average rate of 3.3 percent per annum since the Population and Housing Census (PHC) took place in 2006. In 2015, the population of Nigeria is estimated at 183 million people, consisting of 92,387,474 males and 90,989,254 females. Though, Nigeria is ranked the tenth among the most populous and fastest growing countries in the world and indeed Africa, international migration have continued to play a very negligible role in determining the true population of Nigeria. Past fertility and mortality trends contribute significantly to the prevailing very high rate of population growth.

Figure 1: Nigeria Projected Population by Specific Age Groups (2006-2015)

The projected total population trend in Figure 1 shows a steady population growth rate with prospects of more growths in the years to come; however, a closer examination of the four specific population age groups namely, children less than 15 years; youth 15-39 years; adults 40-59 years; and the elderly 60+ years, reveals that the population pattern remained fairly constant throughout the periods 2006-2015.

## 2. Population Distribution by Sex

Table 1 shows the distribution of Nigeria projected population from 2006-2015 by sex. In 2015, women constitute 49.5 percent and men 50.5 percent of the population (see Figure 2). Also, in 2015, sex ratio dropped from 103 to 102 men per 100 women. The drop in the number of males for every 100 females, as previously reported, can largely be explained by the fact that sex ratios generally vary and follow different patterns of mortality and migration for males and females within the population.

Figure 2: Percentage Distribution of the Population by Sex 2015

## 3. Fertility

Fertility, as a demographic indicator, refers to the ability of a human being to reproduce another human being as currently being measured by the number of *children ever born*. *Child bearing*, by itself, is dependent on so many factors as well as social circumstances such as culture, tradition, education and the overall level of development of a particular society or community. Also, the *age of entry* into a union and the availability of contraception are two key proximate determinants of fertility. However, the most commonly used measure or indicator of fertility is the total fertility rate (TFR), which is, *the number of children that a woman bears over her entire childbearing years*, provided at each age during the childbearing years, she experience the age-specific fertility rate (ASFR). Age specific rate, in turn, is *the number of births given to by a women of a specific age group per 1,000 women in that particular age group*. In 2015, total fertility rate remains at 5.5 births per woman (or 5,500 births per 1,000 women). This simply means that, if the age-specific rates for the year 2015 had continued without any changes, then women in Nigeria would have had on the average 5.5 children each during their entire childbearing years.

**Figure 3: Total Fertility Rate by State**

Figure 3 shows the total fertility rate of Nigeria and each of the 36 states as well as the FCT, Abuja.

#### 4. Aging

Aging is one important demographic indicator that has no specific or easily adoptable definition. In this report, *aging* is defined simply as *continued increase in age*. In Nigeria, both women and men are regarded and treated as *elderly* on getting into the 60 years or more age group. A demographic phenomenon that displays constant rate of increase is the proportion of the younger population. Great transformations usually occur in societies where there are preponderance of young, active and vibrant people but where older people are more in number, then significant challenges do exist, primarily, in ensuring that the right to adequate living conditions throughout the extended life span are well managed. The total number of older people, that is, those aged 60 years or more went up slightly from 6,987,147 million in 2006 to the estimated 6,987,232 in 2015 (see Table 1).

**Table 1: Projected Population and Population of Elderly 60+ Years, 2006-2015**

Year	Total Population	Male Population	Female Population	Total Elderly 60+ years	Male Elderly 60+ years	Female Elderly 60+ years
2006	140,431,790	71,345,488	69,086,302	6,987,147	3,897,760	3,089,387
2007	145,325,769	73,249,904	72,075,865	6,986,170	3,897,005	3,089,165
2008	149,933,510	75,590,837	74,342,673	6,986,362	3,897,106	3,089,256
2009	154,642,926	77,983,427	76,659,499	6,986,561	3,897,210	3,089,351
2010	159,500,688	80,451,382	79,049,306	6,986,766	3,897,317	3,089,449
2011	164,272,861	82,875,855	81,397,007	6,986,898	3,897,386	3,089,512
2012	169,087,829	85,322,069	83,765,760	6,987,066	3,897,474	3,089,592
2013	173,876,409	87,754,877	86,121,532	6,987,242	3,897,566	3,089,676
2014	178,605,318	90,011,884	88,593,434	6,987,149	3,897,456	3,089,693
2015	183,376,728	92,387,474	90,989,254	6,987,232	3,897,479	3,089,753

Source: NBS

## 5. Migration

As a key demographic indicator, it is common knowledge that migration usually takes place in any population as long as humans and other attractive economic opportunities exists therein. Over the years, migration has resulted in a whole new set of socio-economic, political and demographic processes. Judging by the results of the last national migration survey, which estimated the total number of internal migrants in Nigeria as 11,257 (NPopC, 2010). The result, however, leaves us with the need to further interrogate and investigate the age-long belief that migration is both sex and age selective. Though, the 2010 study was not meant to prove or disprove this myth, the result was all the same striking, as there were more migrant females, 51.5 percent compared to males, 48.5 percent. There were also significant variations in the results by state as shown in Figure 4.

**Figure 4: Percentage Distribution of Internal Migrants by State and Sex**

## CHAPTER 2: HEALTH

### Key Findings

- The top three most reported notifiable diseases are malaria, measles and tuberculosis
- Life Expectancy was 56 years for females, 53 years for male and 54 years for both (NBS,2013)
- Maternal, infant and Under-five mortality are on the decline
- Of adults living with HIV, 58.6 percent are women and 41.4 percent are men

### Introduction

The World Health Organization (WHO) defines health as “a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity”<sup>1</sup>. However, the Beijing Platform for Action (BPA, 1995) emphasizes that *women have the right to the enjoyment of the highest attainable standard of physical and mental health*<sup>2</sup>. Therefore, empowering women with the necessary knowledge and skills to fulfil these strategic global plans is not only essential to the women’s individual well-being but also to that of their children and immediate families. Tackling gender inequalities, especially, in the provision of health services, enables all women and men everywhere to enjoy healthier lives, which leads ultimately to greater gender equality in all spheres of human life.

### A. Life Expectancy

Life expectancy at birth is an important demographic indicator that depicts *the average number of years a new born child is expected to live given the current levels of mortality in a country*. This indicator is derived from the age specific mortality rates, which paints a picture of the overall health status of a population as well as allowing for the investigation of the longevity of women and men separately. Life expectancy in the population of Nigeria was 56 years for females, 53 years for males, and 54 years for both females and males (NBS, 2013). Figure 5 shows the sex disaggregated life expectancy in Nigeria at the state level.

#### 1. Sex Disaggregated Life Expectancy in Nigeria at the State Level

Figure 5: Life Expectancy in Nigeria by State and Sex, 2013

<sup>1</sup> WHO, 1948

<sup>2</sup> United Nations, 1995a, p.89

## B. Morbidity

Morbidity refers to a *specific incidence of ill health resulting in death in a given population*. This demographic indicator is measured by the number of reported cases from notifiable diseases in any population. In 2015, this indicator is tracked as follows:

### 1. Reported Cases from Notifiable diseases

Statistical Tables 3.1-3.6 and Figure 6 show the distribution of reported cases from notifiable diseases in Nigeria. Of all the diseases reported on, in the period 2010-2015, *HIV/AIDS* accounted for the highest proportion of females infected, 58.6 percent compared to 41.4 percent reported for males. *Malaria* was the second leading disease for both women and men, with females accounting for 54.8 percent and males 45.2 percent within the same period. The aggregated proportions of those infected with *pneumonia, tuberculosis, diarrhoea* with and without water, *yellow fever* and *measles* were equally significant accounting for over 45 percent of cases in both sexes in the period under review. However, most deaths excluding murders and accidents in Nigeria are disease-related.

Figure 6: Reported Cases from Notifiable Diseases by Year and Sex

ST. 4.1-4.6 shows diseases that are among the leading causes of death within the period 2010-2015. The leading killers include but are not limited to *malaria, pneumonia, tuberculosis, diarrhoea, hepatitis B* and *measles*.

**Table 2: Summary Distribution of Deaths by Causes, Year and Sex, 2010-2015**

Disease	2010			2011			2012			2013			2014			2015

## 2. HIV and AIDS

HIV/AIDS, since its recognition in the early 1980s in Nigeria, has been a critical health issue for women and men. The epidemic has continued to undermine development efforts worldwide and afflicts, mostly, populations already beset by extreme poverty. It has been particularly noted to affect the working population, and thus preventing women and men from making meaningful contributions to development and improvement of families. At the household level, the epidemic increases the burden of care and erodes savings. The MDG Goal number 6 calls for *the halting and beginning of the reversal of the spread of HIV/AIDS by 2015*.

## 3. HIV Deaths

About 59 percent of deaths from HIV/AIDS are women (Table 3). Available statistics from State's Ministry of Health that responded to our data request, shows that more of the deaths recorded in 2015 were caused by HIV/AIDS (Table 2). The disease on the average accounted for 58.6 percent female deaths and 41.4 percent male deaths in the period under review, that is, 2010-2015. Table 3 and Figure 7 shows the distribution of deaths resulting from HIV/AIDS disease by year and sex. It should be noted that this table reflects the aggregate reported cases only from State's Ministry of Health.

**Table 3: Summary Distribution of Deaths Resulting from HIV/AIDS by Year and Sex**

Year	Male	Female	%Female	%Male
2010	16449	24931	60.2	39.8
2011	8683	11309	56.6	43.4
2012	9398	16820	64.2	35.8
2013	20239	25955	56.2	43.8
2014	13692	19754	59.1	40.9
2015	15003	18459	55.2	44.8
Average (2010-2015)			58.6	41.4

Source: Ministry of Health

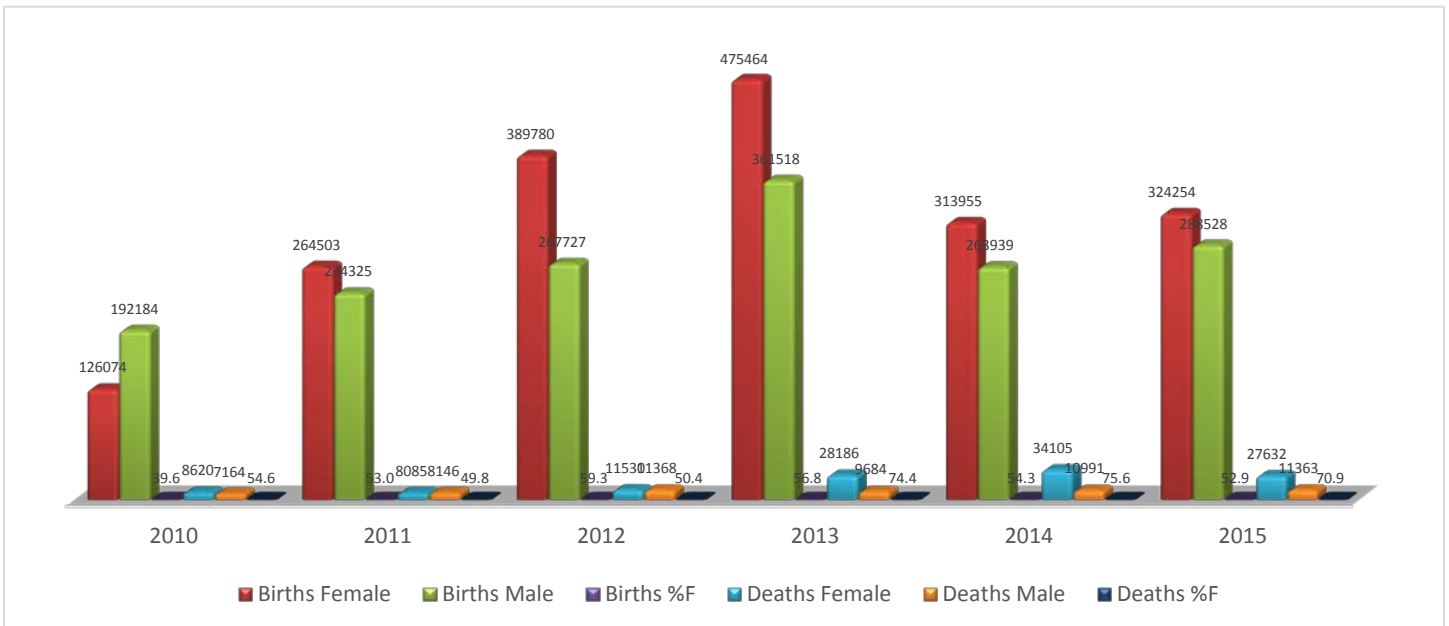

**Figure 7: Distribution of Deaths Resulting from HIV/AIDS by Year and Sex**

**C. Births and Deaths**

Figure 8 shows that female births was 52.9 percent in 2015. The highest proportion of male births was recorded in 2013. Nationally, female death took the greatest toll in 2014, accounting for 75.6 percent compared to 24.4 percent male deaths in the same year. Female deaths were also high in 2013 and 2014, accounting for 74.4 percent and 75.6 percent respectively.

**Figure 8: Distribution of Births and Deaths by Year and Sex**

## A. Reproductive Health

The reproductive years of women begins at puberty through to menopause. Within these period, most women experience important life events such as entry into *sexual union*, *marriage* and *child-bearing*. It is also at these times that particular health risks, especially as related to pregnancy and childbirth, cause ill-health and even death for many women of childbearing age. The non-availability of newer data made the report here same as in 2013

### 1. Prenatal and Delivery Care

Prenatal care is known to improve the outcome of pregnancy and birth for both the mother and child. It not only monitors the health of the mother and foetus but also allow for the identification of potential complication. In addition, it provides women with information about needed nutrition during pregnancy, after delivery and breastfeeding.

**Table 4: Women Receiving Prenatal Care by Zones, 2011**

ZONES	No antenatal care visits	4 or more visits
North Central	23.1	57.4
North East	44.6	35.7
North West	56.8	32.9
South East	6.4	79.4
South South	22.3	62.7
South West	7.3	84.5
Nigeria	36.4	49.9

Source: MICS 4

### 2. Maternal Mortality

In 2004, maternal mortality rate (MMR<sup>3</sup>) was 800 per 100,000 live births, which declined to 545 per 100,000 live births in 2008. It further declined to 350 per 100,000 live births in 2012 and remained same till 2015. Maternal mortality rate improved substantially over the previous years.

### 3. Infant and Under Five Mortality

Infant and under-five mortality rate are demographic indicators that have been witnessing steady decline since 2004. While such decline is a positive sign of steady and significant progress in improving infant and under-five health, the trend over the years is definitely good for Nigeria. In 2012, the infant mortality rates was 61 per 1,000 live births and declined to 58 per 1,000 live births in 2014 (NBS - MDGs Performance Tracking Survey, 2012). High infant and under-five mortality remain more of rural phenomena.

---

<sup>3</sup> MMR is computed using the sisterhood or siblings' history approach rather than household deaths.

#### 4. Contraceptive Use

Preventing pregnancy, thereby ensuring adequate child spacing, remained noticeably low in 2015; although appreciably higher than in 2004 and 2008. The use of contraceptives increased to 17.3 percent in 2012 from 14.6 percent in 2008 and 8.2 percent in 2004 (NDHS 2008 and NBS MDGs Performance Tracking Survey 2012)

#### 5. Immunization

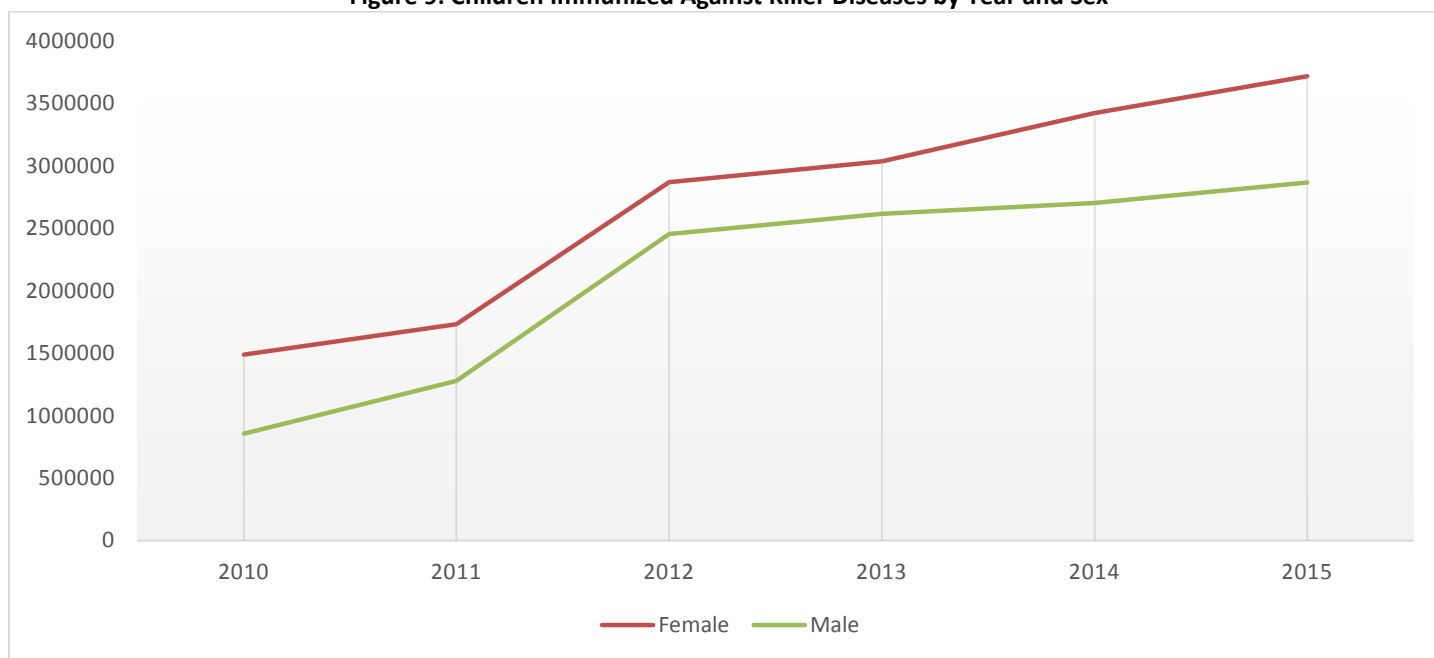

Table 5 and Figure 9 shows the summary distribution of children immunized against killer diseases by year and sex. The percentage of female children immunized dropped from 63.5 percent in 2010 to 56.5 percent in 2015. However, the year-on-year rate of change in immunization against killer diseases decreased from 16.4 percent in 2011 to 5.6 percent in 2015.

**Table 5: Summary Distribution of Children Immunized Against Killer Diseases by Year and Sex**

Year	Female	Male	%Female
2010	1488276	855606	63.5
2011	1732160	1280277	57.5
2012	2870518	2455844	53.9
2013	3037315	2616642	53.7
2014	3423101	2703138	55.9
2015	3718493	2868143	56.5

**Figure 9: Children Immunized Against Killer Diseases by Year and Sex**

## CHAPTER 3: EDUCATION

### Key Findings

- *Enrolment of Girl-Child into Primary, Secondary and Tertiary Institutions on the increase*
- *Female enrolment in primary schools increased from 45.7 percent in 2010 to 48.6 percent in 2015*
- *Youth literacy rate was below National Literacy Rate in mostly Northern States*
- *Primary and Secondary Schools completion rate dropping*
- *Percentage of females enrolled in secondary schools increased from 45.3 percent in 2010 to 45.7 percent in 2015*
- *Women constitute about a quarter, the lowest proportion of teachers at the tertiary level of education.*

### Introduction

Education is a solid foundation central to human development. Through it, essential skills and competencies are developed that enhance quality of life, thereby bringing wide range of benefits to both individuals and societies. However, investing in the education of girls and women, in particular, which naturally aligns with the age-long recognition of education as a fundamental right with far-reaching impacts on human development and social progress, in turn, produces exceptionally high social and economic returns. The importance of education for the advancement of women was highlighted in the Beijing Platform for Action, which again identifies it as one of the 12 critical areas of concern and further affirmed it as central for *gender equality* and *women empowerment*. The Platform for Action also called for eliminating discrimination in education on the basis of *gender* at all levels, eradicating illiteracy among women and improving access to vocational training, science and technology and continuing education. With the adoption of the Millennium Development Goals (MDGs), the aim of eliminating *gender disparities* in education has been further intensified as it is essential to achieving the goals. Goal 3, in particular, calls for achieving *gender parity* in primary and secondary education, preferably by the target date of 2005, and at all levels of education no later than 2015. This chapter focusses on the following:

### A. Educational outcomes

#### 1. Literacy

##### Box 3.1

UNESCO defines literate person as one who can with understanding both read and write a short simple statement on his(her) everyday life, and an illiterate person as one who cannot with understanding both read and write a short simple statement on his (her) everyday life.

#### 2. Adult literacy

##### 2.1 Youth literacy (15-24 year old)

Figure 10 shows literacy among young women 15-24 years across the 36 states of the Federation and the FCT, Abuja. While literacy level of most young women especially in southern states is high, those of their counterpart in mostly northern states are below the half mark.

**Figure 10: Literacy among Young Women 15-24 Years by State**

Source: NBS/FMYD 2012 National Baseline Youth Survey

## B. Participation in Education

### 1. Enrolment in Primary Education

From States' Ministries of Education, available data show that enrolment in primary education increased in most states in the country. The proportion of primary school aged girls enrolled in school increased from 45.7 percent to 48.6 percent in 2015 as in Figure 11.

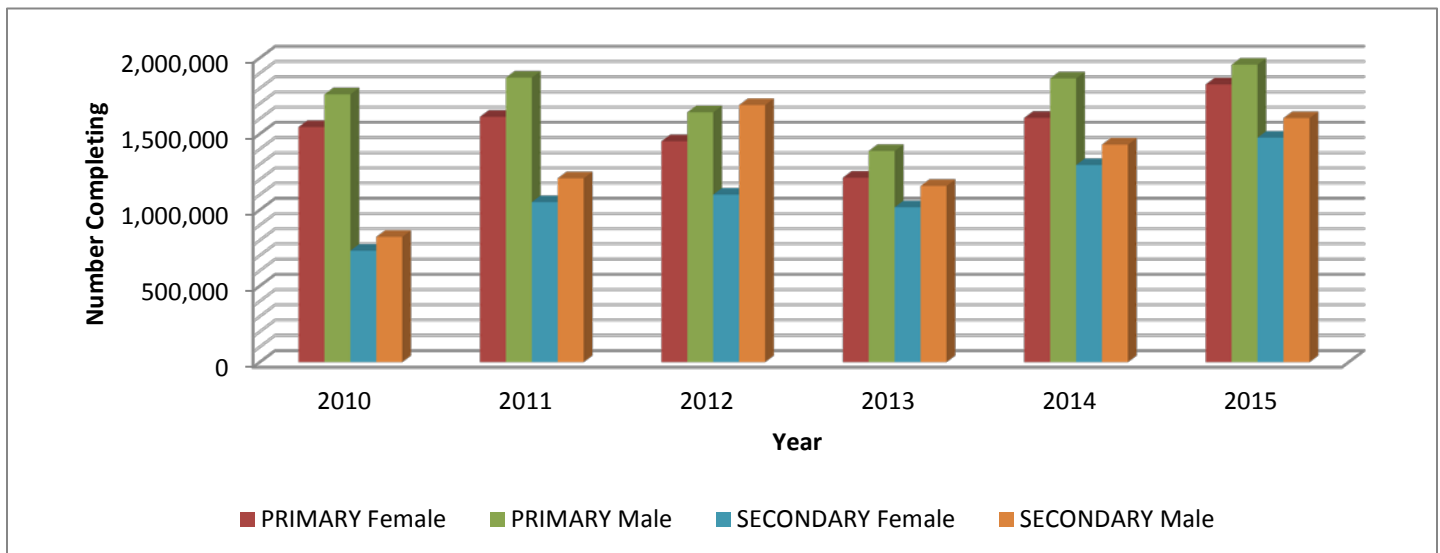

**Figure 11: Total Enrolment in Primary Schools by Year and Sex**

## 1.1 Completion rate

In States' Ministries of Education's administrative records as shown in Figure 12 is the completion rate in primary and secondary schools. The completion rate in primary and secondary schools increased for girls from 46.7 percent and 47.1 percent in 2010 to 48.3 percent and 47.9 percent in 2015 respectively.

Figure 12: Distribution of Persons Completing Primary and Secondary Schools by Year and Sex

Female students who sat and passed the West African Examination Council (WAEC) with five credits and above including English and Mathematics was about 49.0 percent in the reference period, 2011-2015 (Table 6).

Table 6: Summary Distribution of WAEC Results by Year, Subject and Sex, 2011-2015

Year	Total No. Sat			5 Credits & Above Plus Eng. Lang.			5 Credits & Above Plus Mathematics			5 Credits & Above Plus Maths & Eng. Lang.

Source: WAEC

## 2. Secondary Education

### 2.1 Enrolment Rate in Secondary Education

The enrolment of girls and boys into secondary schools, like in primary schools as measured by the number of in-takes at this level of education is also increasing across the country, though some states are still far from attaining universal basic education. Figure 13 shows summary of total enrolment in secondary schools by year and sex. The percentage of girls enrolled in secondary schools increased from 45.3 percent in 2010 to 45.7 percent in 2015. The year-on-year rate of change in girls' enrolment in secondary school rose from 8.0 percent in 2011 to 11.5 percent in 2012 to 21.7 percent in 2015.

**Figure 13: Total Enrolment in Secondary Schools by Year and Sex**

### 3.1 Enrolment and out-turn in tertiary education

Table 7 gives students' enrolment and out-turn in *tertiary institutions*<sup>4</sup> by year and sex. The aggregate percentage of females enrolled into *Colleges of Education, Polytechnics and Universities* increased from 43.2 percent in 2010 to 43.7 percent in 2015. On the average, enrolment into tertiary institutions across the country appears to be male dominated with some states still far from attaining universal basic education.

**Table 7: Students Enrolment and Out-turn in Tertiary Institutions by Year and Sex**

Year	College of Education						Polytechnics						University					
	Enrolment			Out-turn			Enrolment			Out-turn			Enrolment			Out-turn

Source: NCE/State Polytechnic/State University

### 1.2 Educational attainment

Educational attainment is *the quantum of out-turns from tertiary institutions and number that participate in National Youth Service Corps (NYSC) in a given year*. Table 7 and Figure 14 both shows the distribution of persons completing tertiary institutions and NYSC participation by year and sex. The percentage of females completing

<sup>4</sup> refers to the collection of all Colleges of Education, Polytechnics and Universities in Nigeria treated as a unit.

tertiary institutions decreased from 41.3 percent in 2010 to 38.4 percent in 2015. However, the year-on-year rate of change in educational attainment rate dropped to 5.4 percent in 2015.

**Figure 14: Distribution of NYSC Participation by Year and Sex**

### C. Teaching Staff

The quality of the teaching staff, to a large extent, determines the quality in the educational deliverables to any given population. In the spirit of the Beijing Platform for Action, *gender balance* among the teaching staff is critical to promoting *gender parity* and *equality* in access to and achievements in education; and for creating a supportive and non-discriminatory learning environment for both women and men. There is growing awareness that gender balance among teaching staff is closely related to improvement of gender parity in enrolment<sup>5</sup>. This is so, because, as the proportion of female teachers increases from low levels, girls' enrolment rises relative to boys. The feminization of the teaching profession, particularly, in states where women have lower socio-economic status can serve as an *empowering tool* for young women to pursue their studies, and for parents to choose to educate the *girl-child*<sup>6</sup>.

**Table 8: Percentage of Women in Teaching Staff By Year and Level of Education**

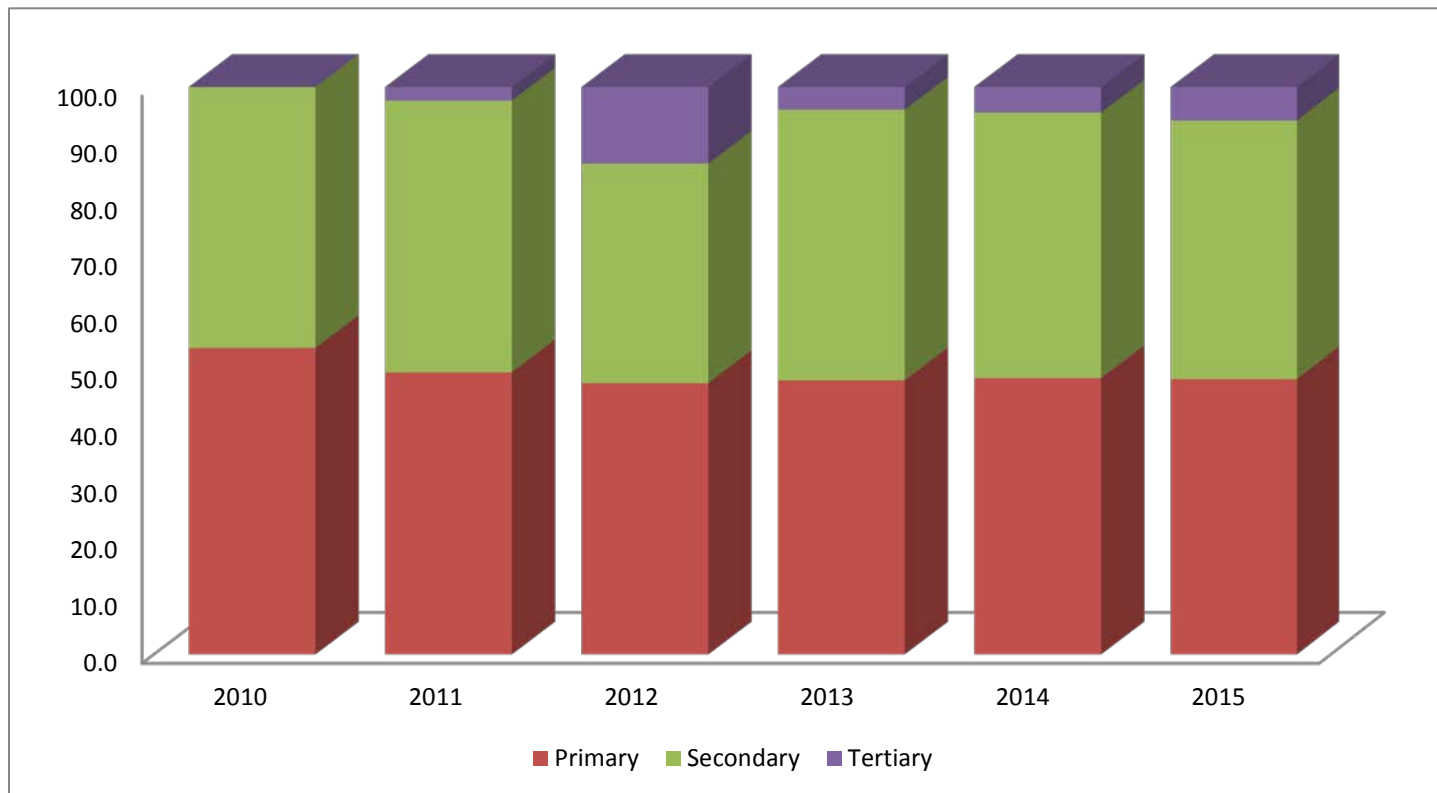

Year	Primary	Secondary	Tertiary
2010	54.0	47.0	25.4
2011	49.7	47.9	24.4
2012	47.8	38.7	25.6
2013	48.3	47.7	25.5
2014	50.1	47.3	24.9
2015	49.5	46.8	26.3

<sup>5</sup> Colc Lough et al, 2003

<sup>6</sup> UNESCO, 2003

Table 8 and Figure 15 shows the percentage of women in teaching staff by educational qualification and level of education for the period 2010-2015. It is very obvious that female teachers constitute the majority of primary school teachers in Nigeria.

**Figure 15: Women in Teaching Staff by Level of Education and Year**

From Table 9, most female teachers are holders of the Bachelor of Education degree at the primary level in the period under review, 2010-2015; followed by holders of NCE certificate.

**Table 9: Percentage of Women in Teaching Staff by Qualification, Year and Level of Education**

## CHAPTER 4: WORK

### Key Findings

- In 2015, labour force participation rate was 65.1 percent for women and 71.4 percent for men
- Some measure of equity seem maintained between women and men in few states
- Women dominate the labour force in some states

### Introduction

Women constitute roughly half of Nigerian's population and by extension half of the work force. As a group, women do as much work as men if not more. However, the types of work as well as the condition under which women work and their access to opportunities for advancement differs from men. Women are, often, disadvantaged compared to men in access to employment opportunities and conditions of work; furthermore, many women forgo or curtail employment because of family responsibilities. The removal of obstacles and inequalities that women face with respect to employment is a step towards realizing women's potential in the economy and enhancing their contribution to economic and social development. The Beijing Declaration affirms *national commitment to the inalienable rights of women and girls and their empowerment and equal participation in all spheres of life including the economic domain*<sup>7</sup>. The Beijing Platform for Action (BPA), identifies women's role in the economy as a critical area of concern and calls attention to the need to promote and facilitate women's equal access to employment and resources as well as the harmonization of work and family responsibilities for women and men.

Furthermore, the Millennium Development Goals (MDGs) targets the achievement of full and productive employment and decent work for all including women and young people as part of MDG 1 *to eradicate extreme poverty and hunger*. Some progress has been made towards these ends, but *the gains are uneven*. This chapter examines trends over the last 8 years and describes the current situation of women and men in the labour force, employment and unemployment.

#### **Box 4.1: Concepts related to Labour Force**

The "*economically active population*" comprises all persons of either sex who furnish, or are available to furnish, the supply of labour for the production of goods and services, during a specified time reference period. As defined by the System of National Accounts (SNA), the production of goods and services includes all production oriented to the market, some types of non-market production (including production and processing of primary products for own consumption), own-account construction and other production of fixed assets for own use. It excludes unpaid activities, such as unpaid domestic activities and volunteer community services.

Two useful measures of the economically active population are the "*usually active population*", measured in relation to a long reference period such as a year; and the "*currently active population*", measured in relation to a short reference period such as one week or one day. The currently active population, also called the "*Labour Force*", is the most widely used measure of the economically active population. The labour force comprises all persons above a specified minimum age who were either employed or unemployed during the specified reference period. The statistics on economic characteristics presented in this chapter refer to persons 15-64 years of age unless otherwise stated.

---

<sup>7</sup> United Nations, 1995

“Employed” comprises all persons above a specified age who during the short reference period either worked for pay or profit, or contributed to a family business (farm) without receiving any remuneration (i.e., were unpaid).

“Unemployed” comprises all persons above a specified age who during a specified reference period:

- “did not have any work/job”, i.e., were not employed;
- Were “currently available for work”, i.e., were available for paid employment or self-employment; and
- Were “seeking work”, i.e., had taken steps in a specified recent period to seek paid employment or self-employment (this condition is relaxed in situations where conventional means of seeking employment are not relevant)

“Persons not in the labour force” (or “population not currently active”) comprises all persons not classified as employed or unemployed during the reference period, as well as those below the age specified for measuring the economically active population. A person may be inactive for the following reasons;

- Attending an educational institution;
- Engaging in household duties;
- Retired or old age; or
- Other reasons such as infirmity, disability, etc.

Source: Hussmanns and others, 1990, chapters 2 and 3.

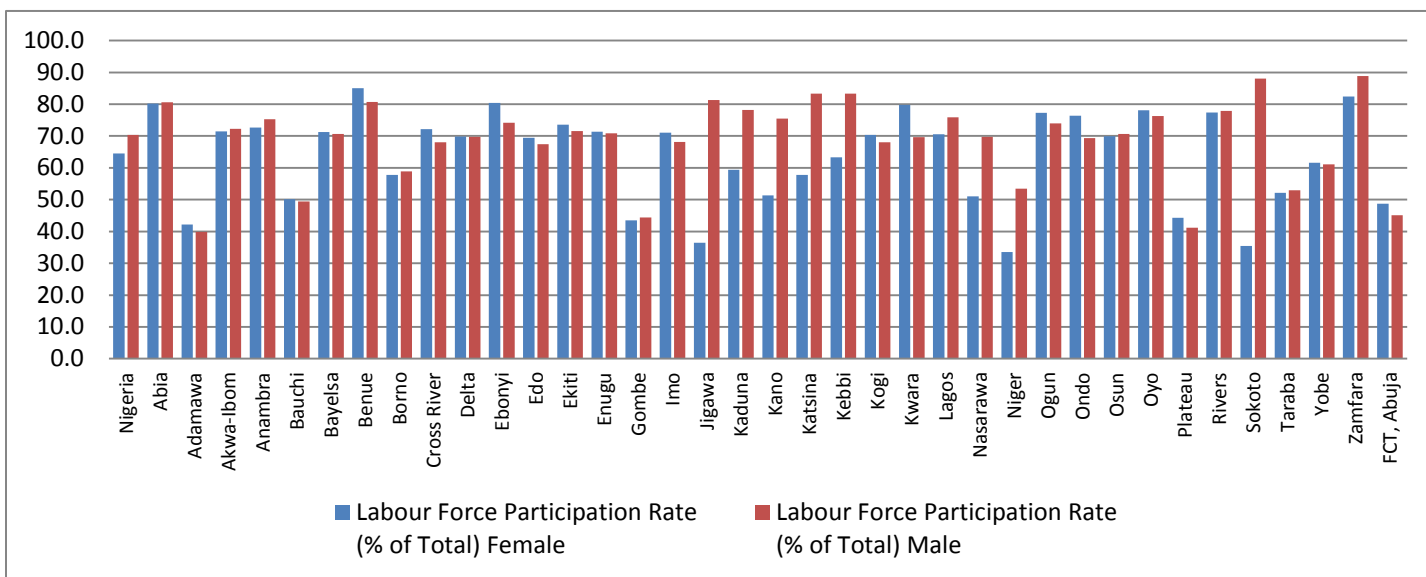

### A. Women and Men in Labour Force

It would have been totally safe to assume equal participation in the labour force, given that the number of women and men are about the same in the population of Nigeria (NPopC, 2006) but the 2015 result of NBS LFS completely disapprove this assumption.

#### 1. Labour Force Participation of Women and Men Age 15-64 Years

The labour force participation rate (LFPR) was 65.1 percent for women and 71.4 percent for men in 2015. Figure 16 shows the labour force participation rate in Nigeria by state and sex.

Figure 16: Labour Force Participation Rate by State and Sex

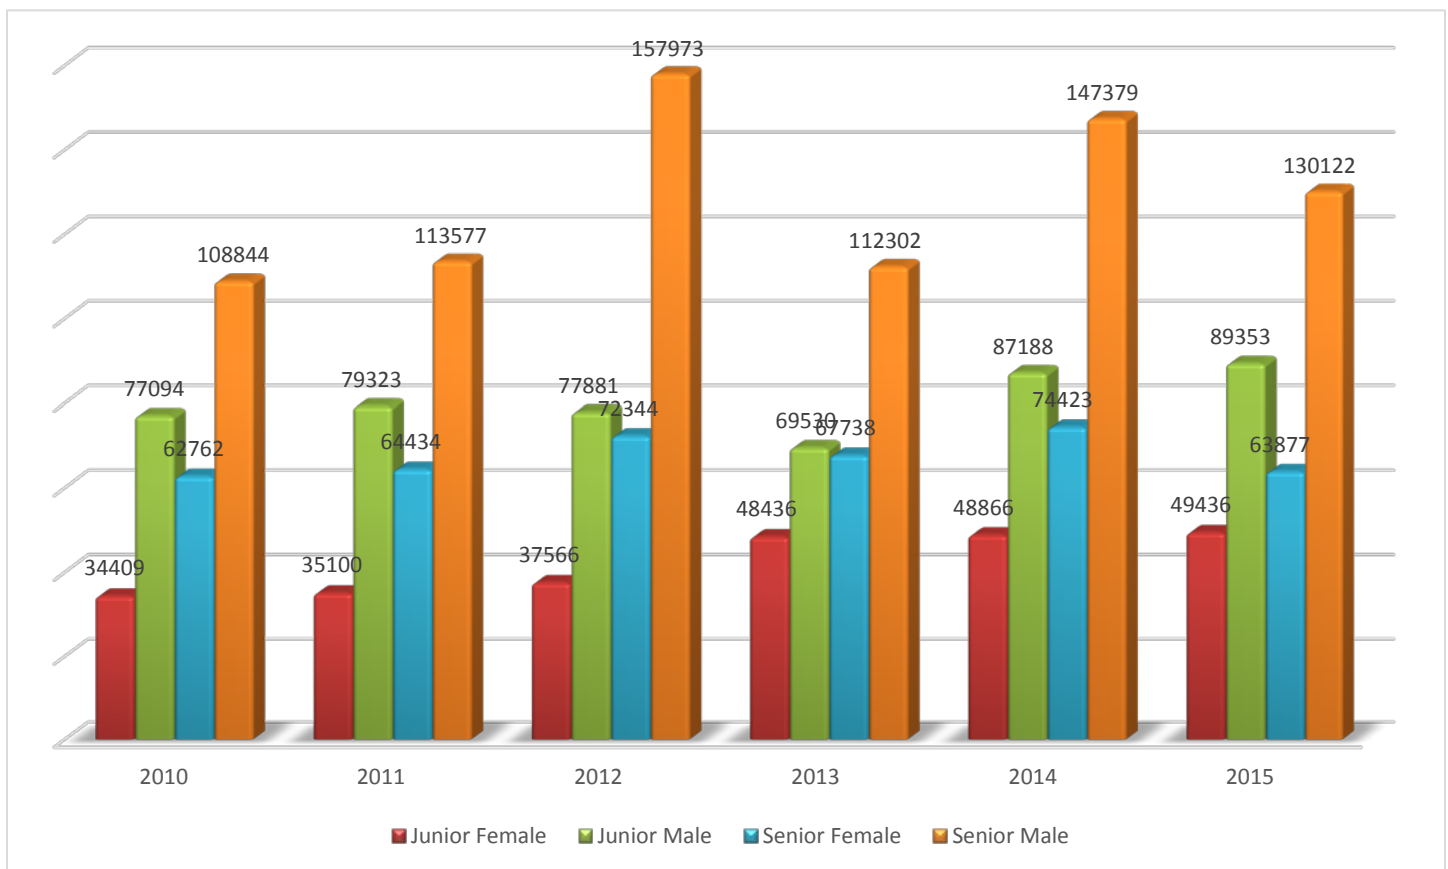

## 2. Women and Men in Federal and State Civil Service

In the civil service, women’s representation is among the concerns raised in the Beijing Platform for Action. However, limited information to the access levels and trends, poses challenges to addressing *gender disparity* in the Action’s strategic areas of concern.

### 2.1 Employment in State Civil Service

Figure 17 shows, on the average, that 65.3 percent of senior positions are occupied by men compared to 34.7 percent by women for the period 2010-2015. At the junior level and across cadre, similar pattern was maintained. The proportion of men employed in the reference period was consistently higher than that of women.

Figure 17: Summary of State Civil Servants by Type, Year and Sex

### 2.2 Distribution of Staff in State MDAs

Figure 18 shows more number of male staff in state employment across all cadres and for each of the years under review, 2010-2015. Overall, among the stock of staff in state employment in 2015, women constitute more than a half of the labour force.

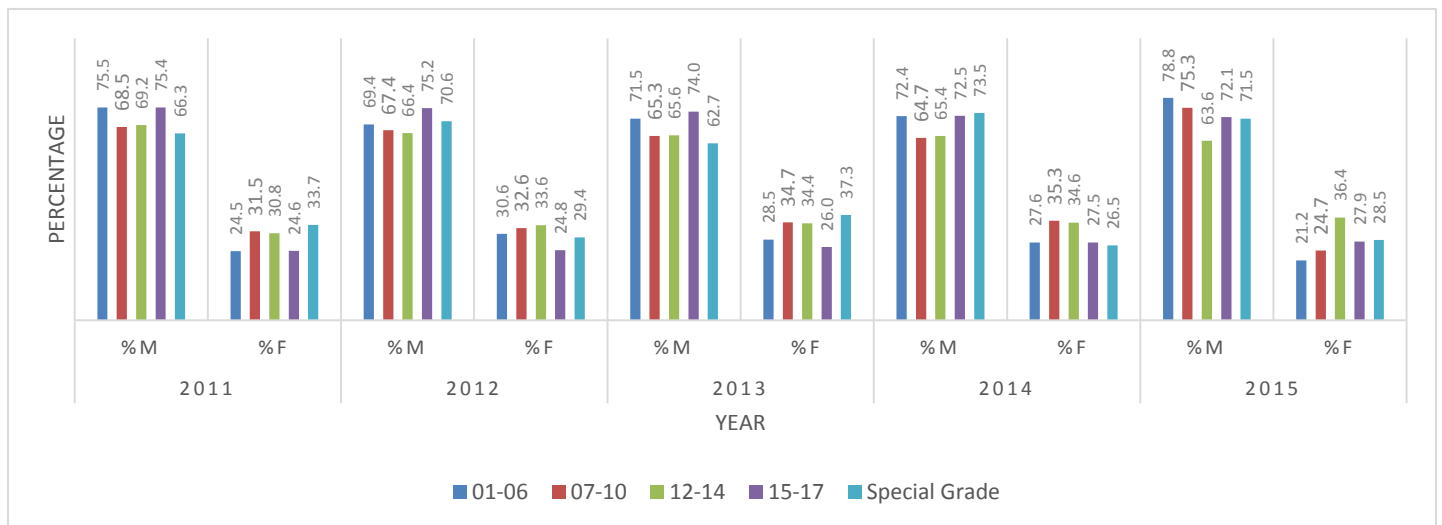

**Figure 18: Distribution of Staff in State Employment by Cadre, Year and Sex**

### 2.3 Employment in Federal MDAs

Figure 19 shows percentage distribution of Federal MDA Staff by grade level, year and sex from 2011 to 2015. The available statistics indicated that employment in these Federal MDAs by both grade level and cadre skewed in favour of men. The proportion of women on grade levels 01-17 plus Special Grade ranges between 21.2 percent and 35.3 percent in the reference period. For grade level 15-17, in particular, it was as low as 24.6 percent in 2011 and as high as 27.9 percent in 2015.

**Figure 19: Distribution of Federal MDA'S Staff by Grade Level, Year and Sex**

## CHAPTER 5: POWER AND DECISION MAKING

### Key Findings

- At National Parliament, men accounted for 92.5 percent and women 7.5 percent
- Upper House has 91.7 percent men and 8.3 percent women
- Lower House has 92.8 percent men and 7.2 percent women
- Representation at the LGA has 94.4 percent men and 5.6 percent women

### Introduction

The *Universal Declaration of Human Rights* recognizes the right of every individual to take part in the government of his or her country<sup>8</sup>. Equal access to power, decision making and leadership at all levels is a necessary condition for the proper functioning of democracy. Ensuring women's freedom to participate in politics both as voters and as elected representatives has been central to international, regional and national efforts aimed at more inclusive and democratic governance. These freedoms and rights are not limited to politics but extend to participation and leadership in public life, the private sector and civil society in general. The *Convention on the Elimination of All forms of Discrimination against Women* commits state/parties to act appropriately to ensure that women and men have equal rights in regards to voting, participation in the formulation of government policies, participation in non-governmental organization and representation of their governments at the international level<sup>9</sup>. The *Beijing Declaration and Platform for Action* further states that the empowerment and autonomy of women and the improvement of women's social, economic and political status are essential for the achievement of transparent and accountable government that works for the benefit of both women and men. It recognizes that women's empowerment and full participation on an equal basis with men in all spheres of life, including participation in the decision making process and access to power are fundamental to the achievement of equality, development and peace.

This chapter provides an assessment of the current situation as well as recent trends in the participation of women and men in positions of power and decision making across the country. Four main areas are covered, which include *politics and governance*; the *judiciary and civil service*.

### A. Politics and Governance

The inequality between men and women is highly visible in public governance. An albatross, which often impacts negatively on women's political, economic and social opportunities is the limited number of female participation in the structures of governance, especially, where key policy decisions are made and resource allocation decided.

#### 1. Representation in National Parliament

Women, assumed to be about half of the electorate with right to vote and hold public office, continued to be under-represented as members of the National Parliament. Even after the recognition of the importance of women's political empowerment within the framework of the MDGs, with one of the indicators for monitoring

---

<sup>8</sup> United Nations, 1996 Article 21

<sup>9</sup> United Nations, 1976 Article 7 & 8

Goal 3, that is, to promote gender equality and empower women currently measured as the proportion of seats held by women in the lower- and upper-houses of the National Assembly.

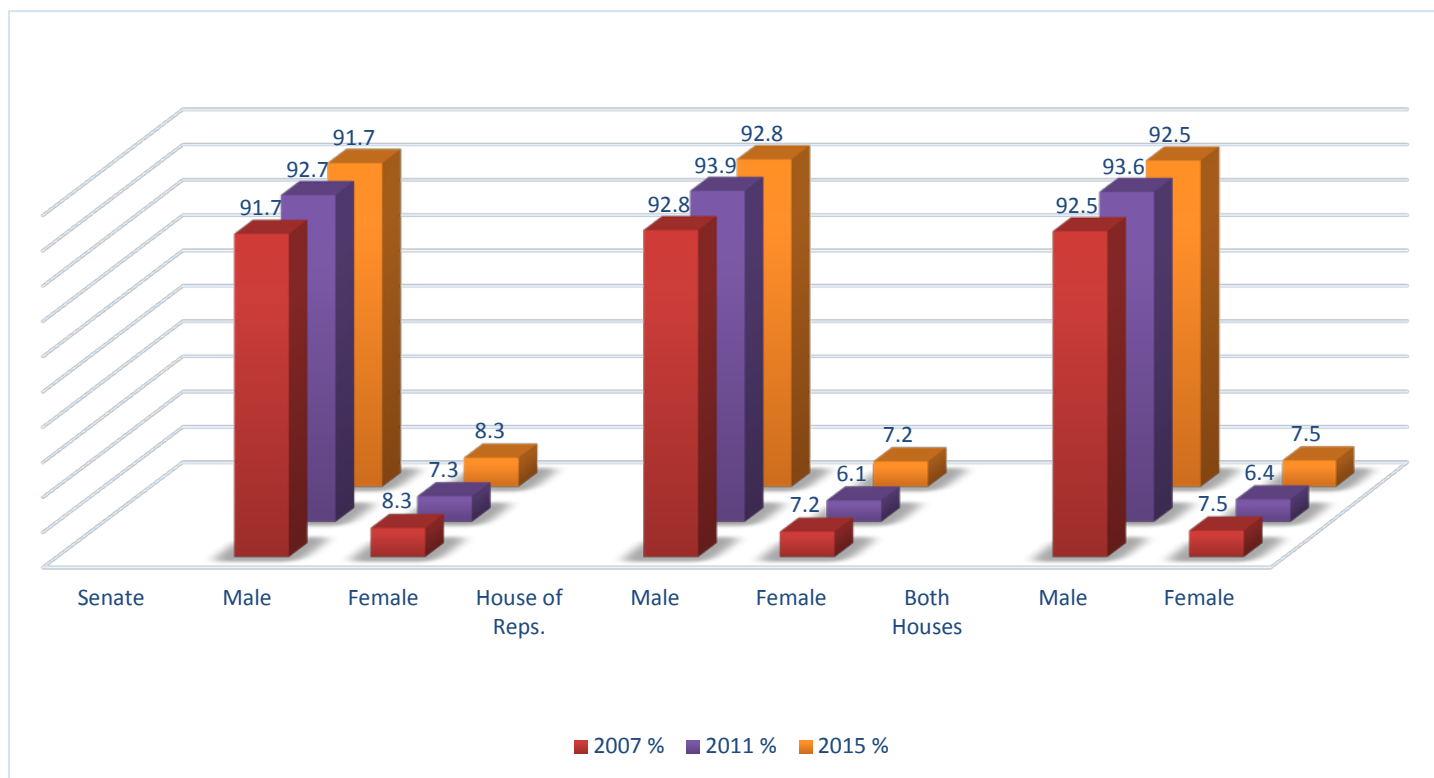

In 2015, being the last election year in Nigeria, out of the 469 honourable members of both Houses, 92.5 percent are men and only 7.5 percent are women. Further, of all the men in both houses of the parliament, 23.0 percent are in the Senate and 77.0 percent in the House of Representative (see Table 10 and Figure 20).

**Table 10: Summary of Seats Held in National Assembly by Type, Sex and Year**

## 2. Representation at State Houses of Assembly

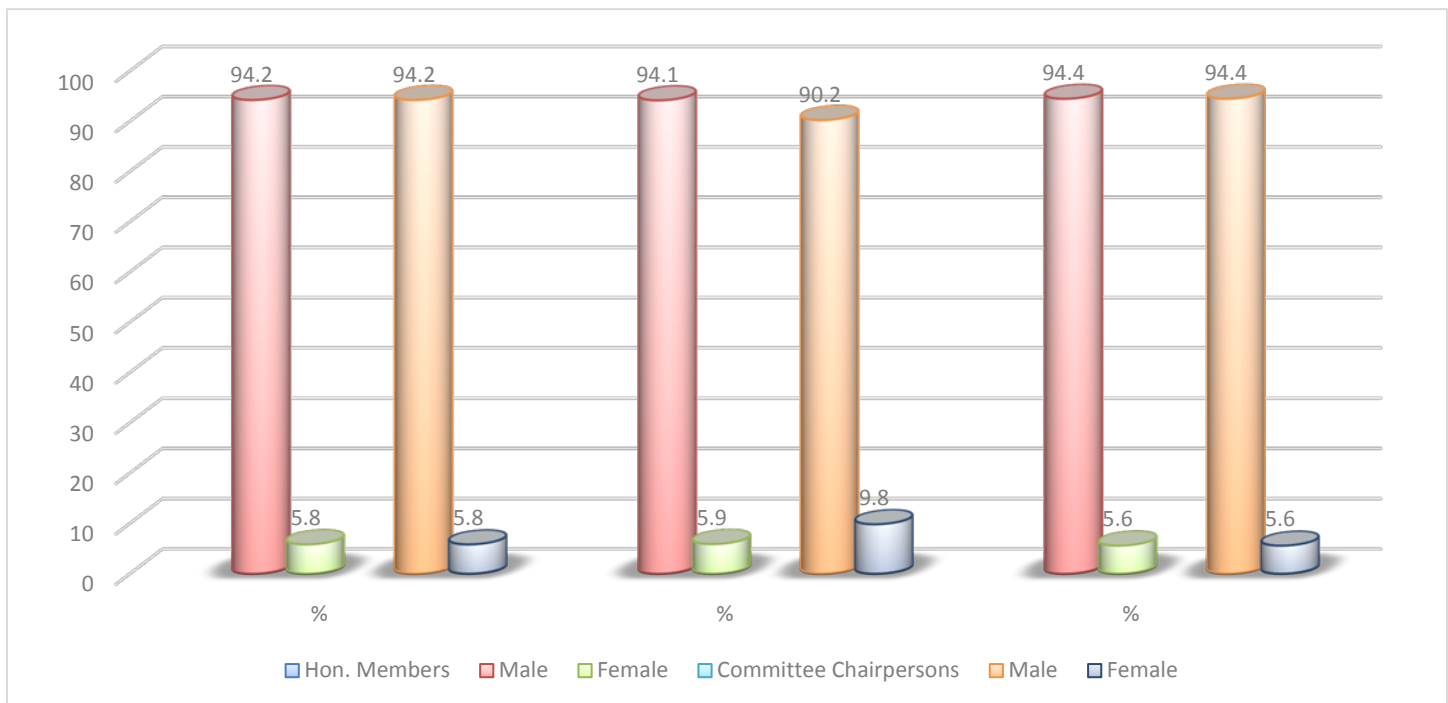

Table 11 and Figure 21 vividly illustrate the representation of women and men in states' houses of assemblies. Like in the National Parliament, the number of men in the State Houses of Assembly, far outweighs that of women. There is, no doubt, that men still and will continue to dominate politics in Nigeria.

**Table 11: Seats Held in State Assemblies by Type, Year and Sex**

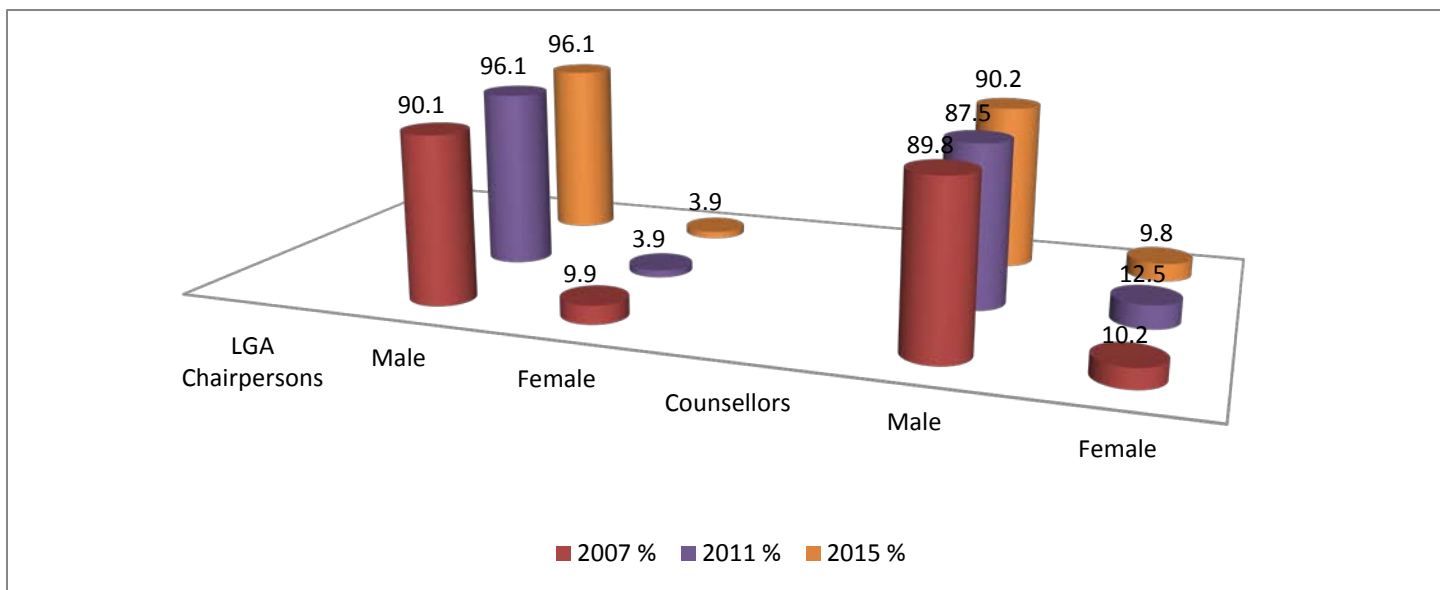

Figure 21: Summary of Seats Held in State Assemblies by Type, Year and Sex

## 3. Representation at the Local Government

Table 12 and Figure 22, shows representation at the local government level. Of a total of 6,681 representatives, made up of 768 Chairpersons and 5,913 Counsellors; male chairpersons and counsellors again far out-numbered their female counterparts especially in 2015. The results further illustrate the gender inequality in representation even at this lowest level of governance. Again, of all the Local Government Chairpersons, men are 95.6 percent and women 4.4 percent; and of all the Counsellors, men are 90.2 percent and women 9.8 percent in the reference period.

**Figure 22: Summary of Seats Held in LGAs by Year and Sex**

Source: State INEC

## 4. Representation in the Judiciary

### 4.1 Judges and Lawyers

Representation in the Judiciary at both federal and state levels is predominantly male in all the 36 states and FCT, Abuja. Male judges and lawyers out-numbered female (Table 13).

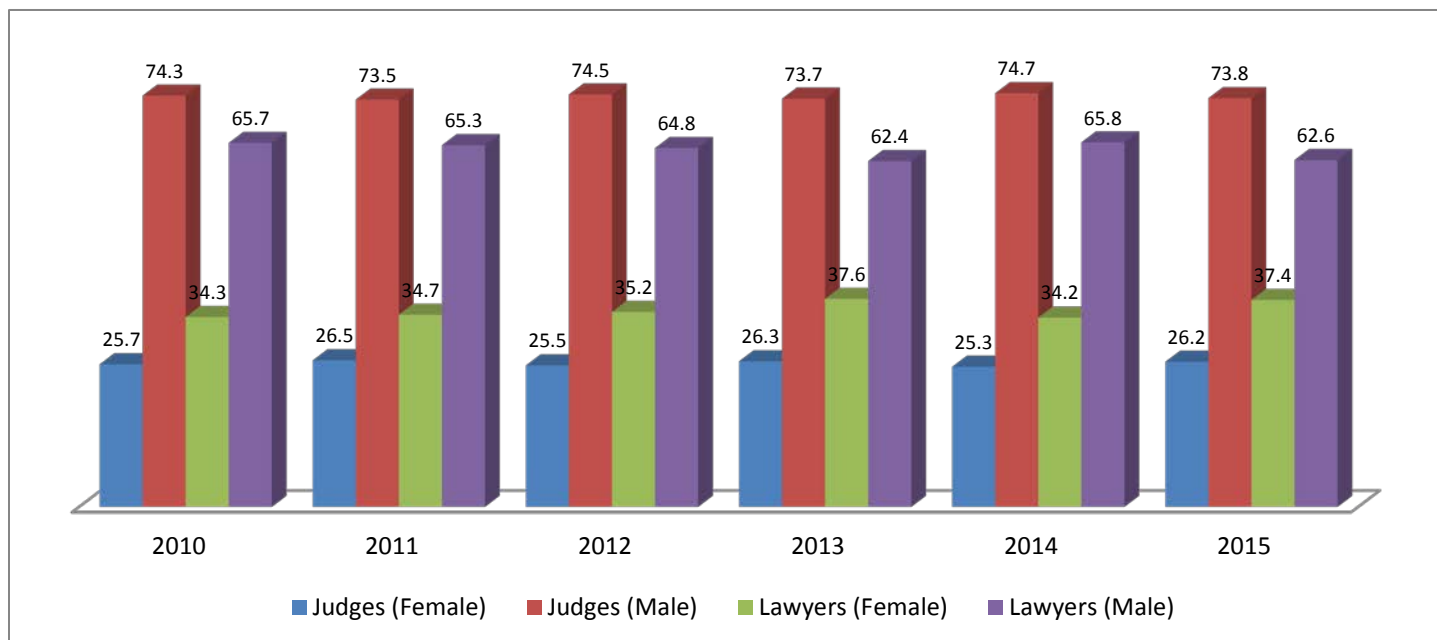

**Table 13: Judges and Lawyers in Nigeria by Year and Sex**

Year	Judges			Lawyers		
	Female	Male	%F	Female	Male	%F
2010	209	603	25.7	439	841	34.3
2011	204	567	26.5	425	799	34.7
2012	214	624	25.5	440	809	35.2
2013	210	589	26.3	506	840	37.6
2014	209	618	25.3	435	838	34.2
2015	212	598	26.2	490	820	37.4

Source: State's Ministry of Justice/State Judicial Service

The number of both women judges and lawyers increased from 25.7 percent and 34.3 percent respectively in 2010 to 26.2 percent and 37.4 percent respectively in 2015. Figure 23 gives a clearer picture of the representation of men and women in the Judiciary.

**Figure 23: Percentage of Judges and Lawyers by Year and Sex**

## 5. Representation in Civil Service

In the Civil Service, women’s representation in decision-making position is among the concerns raised in Beijing Platform for Action. However, the limited information to assess levels and trends, poses challenges to addressing gender disparities in these areas of global concerns.

### 5.1. Senior Administrators

Women are under represented among high-ranking government administrators with decision making powers as shown in Table 14.

**Table 14: High-Ranking Government Administrators**

Type	2010			2011			2012			2013			2014			2015

Source: Secretary to State Government

The highest representation of women among high-ranking government administrators with decision making powers was 17.1 percent in 2011 for the position of Directors-General. Women, who served as Commissioners, Special Advisers, Board Chairpersons, and in few cases elected as Deputy Governors constitute the most improved representations in a male dominated landscape between 2010 and 2015. Figure 24 gives a better picture of women and men representation in various administrative positions.

**Figure 24: Distribution of Women and Men Occupying Political Positions by Year and Type**

In the reference period 2010-2015 as shown in Figure 25, the average percentage of Permanent Secretaries, 19.1 percent are women.

**Figure 25: Distribution of Persons Occupying Position of Permanent Secretaries by Year and Sex**

## CHAPTER 6: VIOLENCE AGAINST WOMEN

### **Key Findings**

- 23.8 percent of women in the age group 25-29 years and 30-39 years experienced the highest form of **physical violence** in 2008 and 2013 respectively.
- 2.5 percent of women in the age group 20-24 years and 2.1 percent in the age groups 18-19 years and 20-24 years experienced the highest form of **sexual violence** in 2008 and 2013 respectively.
- The proportion of females circumcised at age 5 years was above 78.0 percent except age group 40-44 years, where circumcision reduced from 79.3 percent in 2008 to a mere 7.7 percent in 2013

### **Introduction**

Some sections of this chapter rely mainly on the DHS, 2008 and 2013 results and as such are retained verbatim as in the 2013 edition of this report. Violence against women is an obstacle to the achievement of the objectives of *equality, development* and *peace*. It both violates and impairs or negates the enjoyment by women of their fundamental human rights and freedom. In all societies, to a greater or lesser degree, women and girls are subjected to physical, sexual and psychological abuse that cuts across lines of income, class and culture. The low social and economic status of women can be both a cause and a consequence of this violence<sup>10</sup>. The Beijing Platform for Action required all government and the United Nations among others to promote research, collect data and compile statistics relating to the prevalence of different forms of violence against women (especially domestic violence) and to encourage research into their cause, nature, seriousness and consequence as well as effectiveness of measures implemented to prevent and redress violence against women<sup>11</sup>.

### **A. Prevalence and Incidence of Violence Against Women**

Information on violence against women (VAW) reported on in this chapter is based on a module on VAW attached to the NPopC (NDHS, 2008 & 2013).

#### **1. Physical And Sexual Violence Against Women**

Violence against women is not only limited to physical violence but include psychological, emotional, sexual and economic violence. Figure 26 provides more information on physical and sexual forms of violence experienced by women. Physical violence against women during their lifetime is expressed as the percentage of women out of the total number of women that experienced this at least once in their lifetime (usually after age 15). Data was collected on the physical violence women suffered both during their lifetime and in the past 12 months prior to the data collection.

Physical violence consists of acts aimed at hurting the victim and include, but not limited to pushing, grabbing, twisting the arm, biting or hitting with the fists or an object, to trying to strangle or suffocate, burning or scalding on purpose and attacking with some sort of weapon, for example, a gun or knife.

---

<sup>10</sup> United Nations, 2005

<sup>11</sup> Ibid

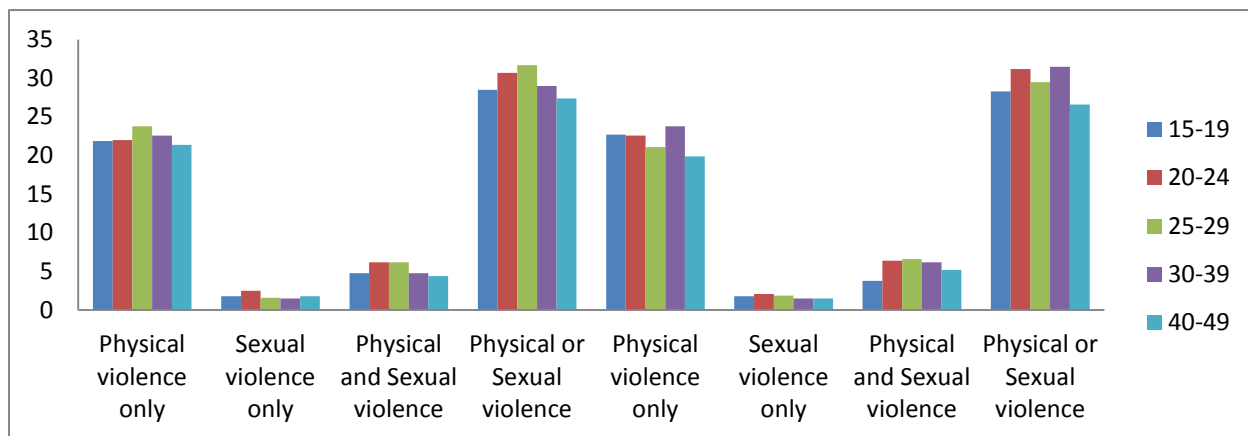

The proportion of women who were victims of physical violence, irrespective of the perpetrators, at least once in their lifetime and in the past 12 months is presented in Table 15 and Figure 26. The Table reveals variations in trend in the reference period 2008 and 2013. Women in the age 25-29 years experienced the highest form of physical violence, 23.8 percent in 2008, decreasing to 21.1 percent in 2013. A higher proportion was also recorded among age 30-39 years in 2008, 22.6 percent. It is instructive to note that the age groups 25-29 years and 30-39 years had the same proportion of physical violence, 23.8 percent in both 2008 and 2013. Sexual violence was highest, 2.5 percent between the age group 20-24 years in 2008 decreasing to 2.1 percent in 2013.

**Table 15: Forms of Violence**

Age	Physical Violence only		Sexual Violence only		Physical and Sexual violence		Physical or Sexual violence	
	2008	2013	2008	2013	2008	2013	2008	2013

**Figure 26: Women's Experience of Violence by Type and Age Group**

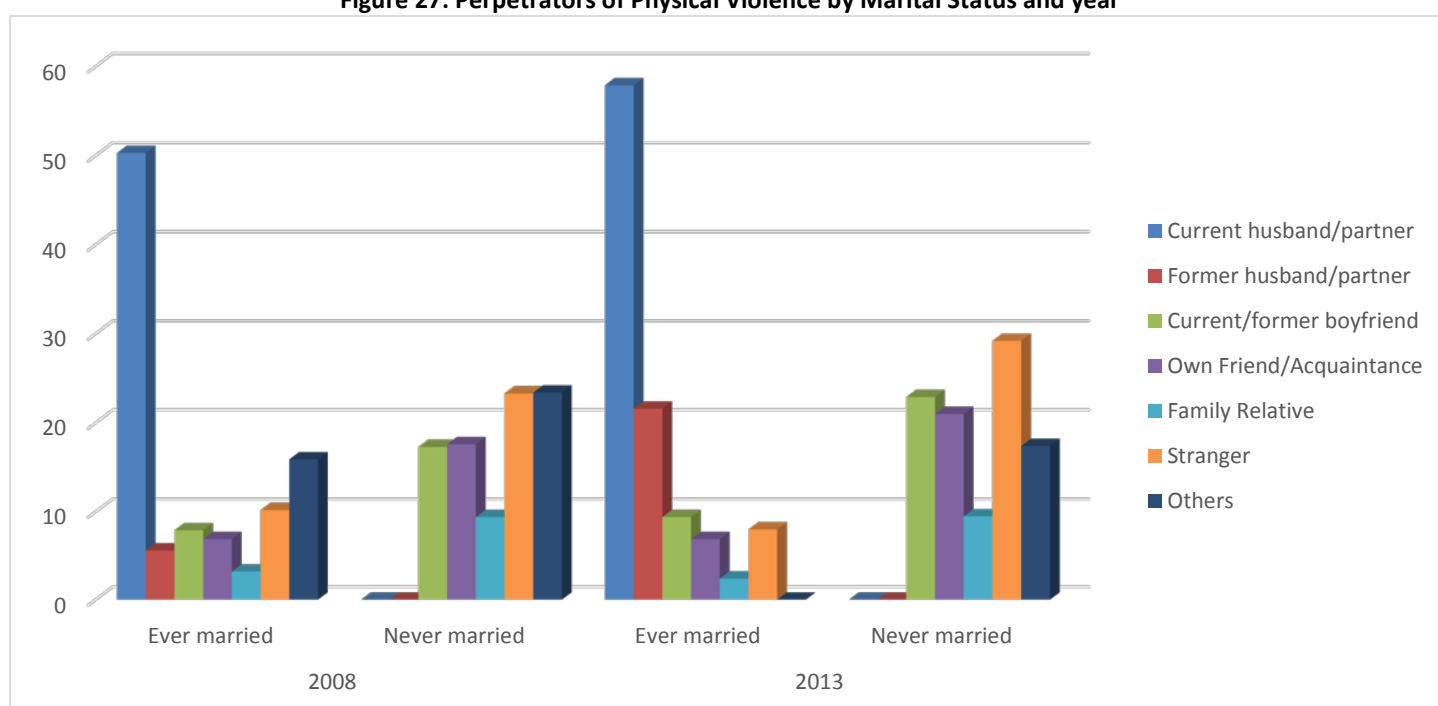

It is informative to note that strangers, family relatives, own friend/acquaintance, current/former boyfriend, and former or current husband/partner are among perpetrators of physical violence in matrimonial relationship as Table 16 and Figure 27 shows.

**Table 16: Persons Committing Physical Violence by Marital Status and Year**

**Figure 27: Perpetrators of Physical Violence by Marital Status and year**

## 2. Female Genital Mutilation

Female Genital Mutilation or FGM is a cultural practice involving the ceremonial circumcision of a female child. Though the ceremony can be carried out at any age, it is mostly done before the female child attains the age of 5 years. This practice has been widely criticized due to its long- and short-term medical implications to the reproductive health of women and the girl child. However FGM is considered as a form of violence against women because it infringes on the right of a woman. Available statistics from NDHS 2008 and 2013 indicate that women in the age bracket 15-19 years experienced most of the circumcision, 90.2 percent when they were less than five years old compared to 89.6 percent of those circumcised when they were older than 5 years. For all the age groups in 2008 and 2013, the proportion of females circumcised when they were less than five years+

was above 78 percent except age bracket 40-44 years whose circumcision reduced from 79.3 percent in 2008 to a mere 7.7 percent in 2013 (see Figure 28).

**Figure 28: Female Genital Cutting by Age of Circumcision, Current Age and Year**

**B. Prison inmates/offenders**

Prison inmates in the period under review, 2010-2015 were male dominated. Available data from Nigerian Prisons Service indicates that female prisoners/inmates are, on the average, only 1.9 percent as shown in Figure 29.

**Figure 29: Prison Inmates by Year and Sex**

### C. Trafficking in Persons

Table 17 shows trafficked persons by age group and sex from 2010 to 2015. Overall, the proportion of trafficked females was highest, 79.8 percent in 2012 but reduced to 58.9 percent in 2015. Trafficking in persons occurred most in the age bracket 26-35 years where females constituted over 90.0 percent followed by age group 16-25 years, which accounted for 88.7 percent in 2012. The proportion of females trafficked in the age group 0-5 years, increased from 48.5 percent in 2010 to 53.8 percent in 2012 and dropped to 42.4 percent in 2015.

**Table 17: Distribution of Trafficked Persons by Age Group and Sex 2010-2015**

The distribution of trafficking in persons by type including trafficking for sexual exploitation of females constituted the highest number, 226 in 2012 and 284 in 2015. This was followed by trafficking for child labour. In 2012, 71.7 percent of females were trafficked for labour exploitation but drastically decreased to 29.7 percent in 2015. Also, in 2012, 92.9 percent of Nigerian females were deported as irregular migrants, though the proportion decreased to 60.3 percent in 2015 (see Table 19 and Figure 30).
