## Export Intensity Index with five Major Trading Partners

The export intensity index compares the share of exports to each country in Nigeria's total exports, with the share of world exports going to that country, and therefore gives a measure of the importance of that country to Nigeria as an export destination. A higher number denotes a stronger relationship, and an index of one indicates that exports to that country are what would be expected given global trade patterns.

In quarter 1, 2017 there was intense export Trade between Nigeria and India and this was depicted by higher export intensities of 6.68, 5.31 and 3.60. Another key export market was Spain with intensities of 4.01, 3.03 and 2.33. Although United States was a major export trading partner but the trade intensity was low with 0.38, 0.77 and 0.49. This can be attributed to the kind of products exported to the country during the period. However, the export intensity values between Nigeria, Netherlands and France were more than index value 1 in January which means a higher intensity of export trade but the downswing resulted from February to March with values less than 1 thus lower export intensity. (Table 2).

**Fig 2: Nigeria's export intensity with five major trading partners during Q1, 2017**

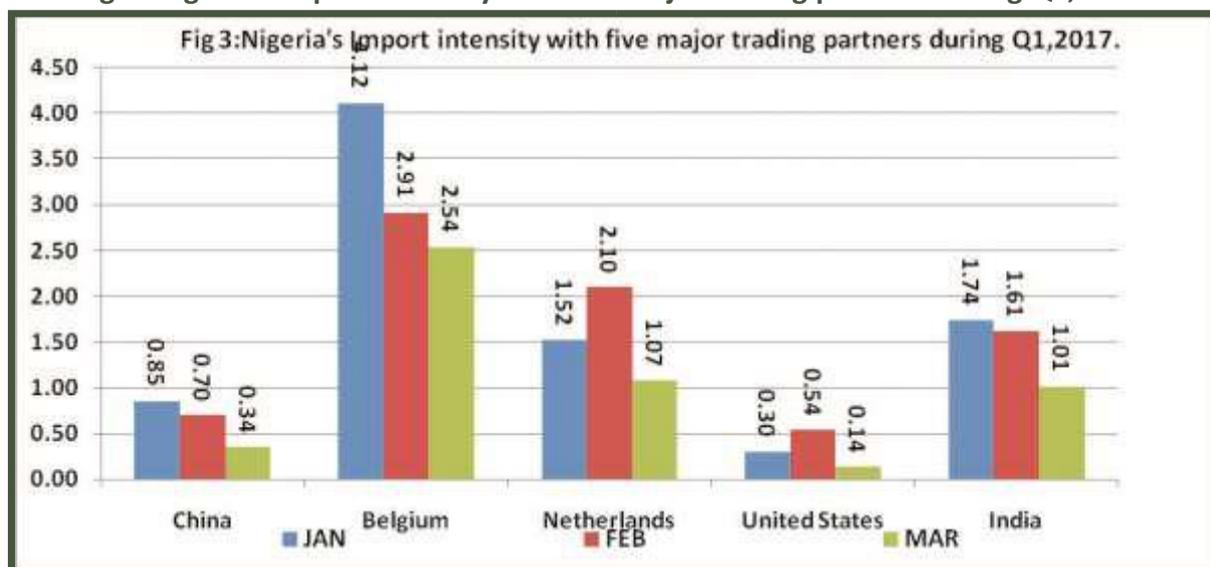

## Import Intensity Index with five Major Trading Partners

The major sources of imports for Nigeria were China, Belgium, Netherlands, United States and India which is quite visible from their percentage contributions to quarter 1, import trade (Table 4a). Despite this, China's import intensity values were low with 0.9, 0.7 and 0.3 for the months of the quarter. This could be attributed to the types of products imported and government restrictive policies during the period under review. For Belgium and Netherlands the import intensities were more than the index value 1. For Belgium the highest value 4.12 was

registered in January. For Netherlands the highest value 2.1 was registered in February. India equally registered high import intensities in all the months with 1.7,1.6 and 1.0. The import intensities with these partners portrays a greater intensity of Nigeria's import trade with Belgium, Netherlands and India.

However United states registered low import intensities of 0.3, 0.5 and 0.1 (Table3).

**Fig 3: Nigeria's Import intensity with five major trading partners during Q1, 2017.**

### Trade by Mode of Transport

In Q1, 2017, Nigeria's total exports were mainly transported by water. The value of Nigeria's export by water transport was N2,993.5 billion representing 99.6%. Meanwhile the proportion of other modes of transport in Nigeria's total export were very low. The goods exported through the rail transport were valued at N8.9 million. Also the goods conveyed through Air transport totaled N4.8 billion and its percentage contribution was 0.15%. Goods worth of N7.2b or 0.23% were exported through Road transport.

For the import trade, the major mode of conveyance into the country was through the water transport valued at N2,131.9b or 93.2%.

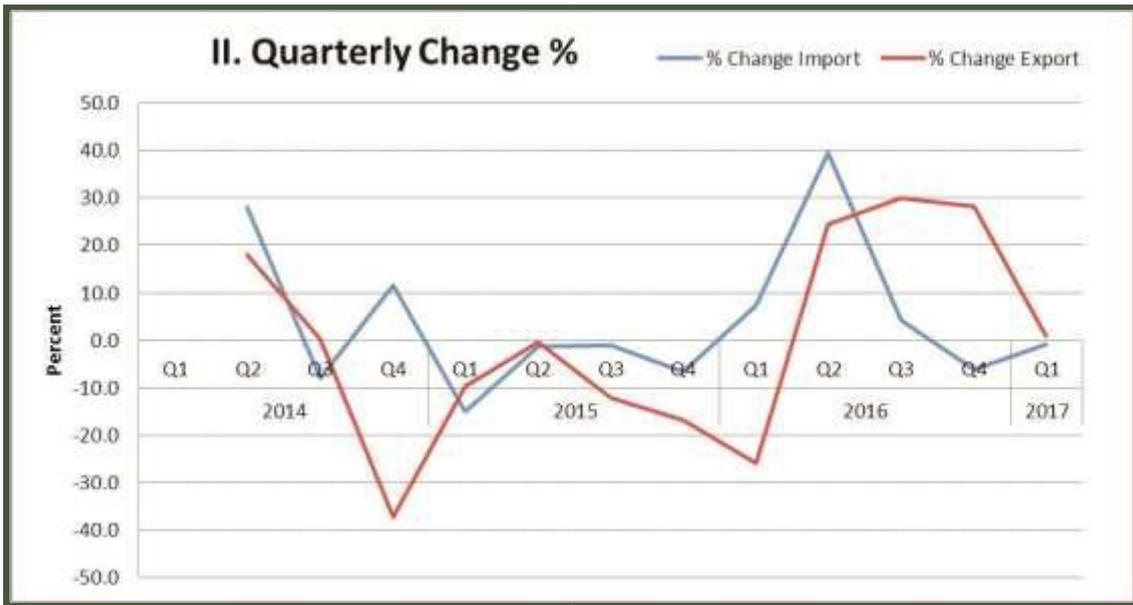

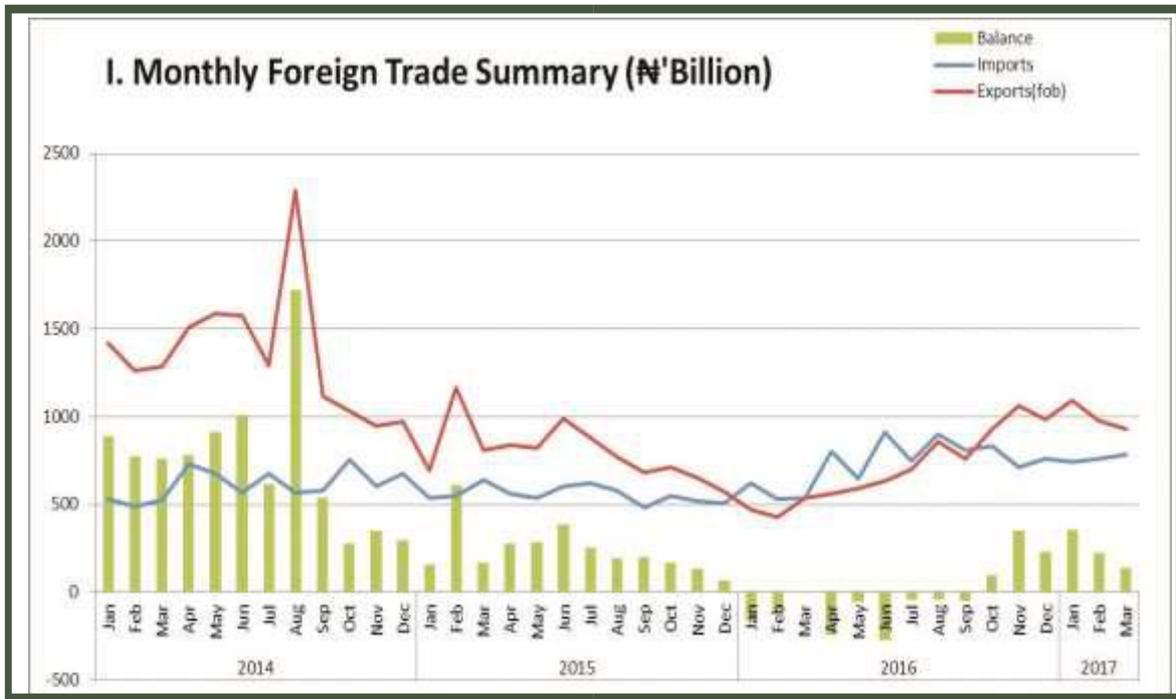

Other means of transport were used but their contributions were low. Road transport accounted for N17.3b or 0.8%. The Air means of Transport was valued at N135.1b or 5.9%. Other transport contributed N2.3b or 0.1%.

### IV. Quarterly Foreign Trade Summary (N'Billion)

# Methodology

The National Bureau of Statistics publishes this Trade statistics report quarterly. Trade statistics compilation by NBS is largely from secondary data sources.

## Data Sources:

The data sources for the compilations include; The Nigerian Customs Service (NCS) through the Nigeria Integrated Customs Information System (NICIS), Nigerian National Petroleum Corporation (NNPC) and Various oil companies in the upstream and downstream sectors of the oil industry, Nigerian Ports, Petroleum Products Pricing and Regulatory Agency (PPPRA), Nigeria Liquefied Natural Gas Ltd (NLNG), Central Bank of Nigeria (CBN), Cobalt International Services Ltd, Carmine Assayer Ltd Inspection Services, Neroli Technology, Nigerian Export Processing Zone Agency (NEPZA), Oil and Gas Free Zone Agency (OGFZA) Nigerian Electricity Regulatory Commission (NERC), Federal Airports Authority of Nigeria (FAAN), Nigeria Civil Aviation Authority (NCAA) and Nigerian Ports Authority (NPA).

## Validation & Quality Assurance:

After collecting data from the above sources, it is verified for outliers, Data validation is undertaken through a sample of the various Nigerian Customs outposts in Nigeria. Weight harmonization is carried out through the various entry posts of imports and exports in Nigeria.

## Processing/Analysis:

Data processing is done using the Global Eurotrace software and the processed data is banked in the trade database. We use the Standard International Trade Classification (SITC) to categorize trade items.

## Definitions:

- Domestic exports - These are goods grown, extracted or manufactured in Nigeria and are sold in another country
- Re-export – These are goods of foreign origin which entered Nigeria to be consumed but are subsequently sold to another country without any substantial transformation. In other words, they are exported in the same condition as imported.
- Raw material goods – These refers to products of Agriculture, forestry, fishing and any other mineral that are in its natural form or which has undergone the minimal transformation required to prepare it for international marketing.
- Agricultural goods - These are goods that come from the planting of crops and/or rearing of animals.
- Solid minerals – These are elements found in the earth. These are naturally organic substances that are solid like precious stones, kaolin etc.
- Energy goods - These only refers to fuel woods in logs, for example hard wood, char-coal, coniferous wood in chips or particles etc.
- Manufactured goods - These are tangible goods created from the conversion of raw materials into consumable or useful products.
- Other Petroleum products - these consists of mineral fuels like Natural gas, oil, Bituminous coal etc.
- Crude oil- These are naturally occurring, unrefined petroleum products composed of hydrocarbon deposits and other organic materials.
- Trade Intensity Index - The trade intensity index is used to determine whether the value of trade between two countries is greater or smaller than would be expected based on their importance in world trade. It is defined as the share of one country's exports going to a partner divided by the share of world exports going to the partner.
