

**NATIONAL BUREAU  
OF STATISTICS**

**ANNUAL ABSTRACT OF STATISTICS,  
2010**

**Federal Republic of Nigeria**

## **Preface**

The **Annual Abstract of Statistics**, is the standard summary of data on society, economy and organizations in the Federal Republic of Nigeria. The publication is a convenient reference source for statistical and related information, with appropriate introductions to the various sections.

In this edition, there are additional tables that cover a variety of topics, including household characteristics, living standards, health, education, communications, banking, insurance and general elections.

The **publication** is available on the Internet and CD-ROM. The National Bureau of Statistics (NBS) website, [www.nigerianstat.gov.ng](http://www.nigerianstat.gov.ng), contains this edition in Adobe Acrobat format.

The statistical information in this publication were extracted from many sources. All data from administrative records, surveys and censuses are subject to error arising from a number of factors such as sampling variability, reporting errors for individual units, incomplete coverage, non-response and imputations.

Users of this **publication** are urged to make their data needs known for consideration in planning future editions. Suggestions and comments towards improving coverage and presentation of data should be sent to the Director-General, National Bureau of Statistics, Plot 762, Independence Avenue, Central Business District, P.M.B 127, Garki, Abuja, Nigeria.

## CHAPTER 1

### AREA AND CLIMATE

The Federal Republic of Nigeria, with an area of 923,769 square kilometers (made up of 909,890 square kilometres of land area and 13,879 square kilometres of water area), is situated between 3° and 14° East Longitude and 4° and 14° North Latitude. The longest distance from East to West is about 767 kilometres, and from North to South 1,605 kilometres. The country is bordered on the west by the Republics of Benin and Niger; on the east by the Republic of Cameroon; on the north by Niger and Chad Republics and on the south by the Gulf of Guinea.

The coast of Nigeria is a belt of mangrove swamps traversed by a network of creeks and rivers and the great Niger Delta. Beyond these lie successive belts of tropical rain forests (that break into a more open woodland with hilly ranges) and the undulating plateau (with hills of granite and sandstone), rising from 609.6 metres on the average to 1,828.8 metres eastwards. Midway north of the country the vegetation is grassland interspersed with trees and shrubs, which terminate in the Sahel Savannah region of the semi-arid north-east.

River Niger (Africa's third longest River) rises from the mountains to the east of Sierra Leone and flows for the first two-thirds of its 4,184 kilometres length outside Nigeria before entering the country from the north-west. It receives the River Benue (which rises from the Republic of Cameroon) at Lokoja and then flows for about 547 kilometres into the Atlantic Ocean. River Niger has as its tributaries, the Sokoto, Kaduna and Anambra Rivers while River Benue receives Katsina-Ala and Gongola Rivers. This second great drainage system runs from the central plateau into Yobe River and eventually empties itself into Lake Chad. Other important river systems include Benin, Escravos, Sombreiro, Bonny, Cross River, Imo, Ogun and Osun.

Nigeria is also blessed with favourable and varied climatic conditions. The climate is equatorial and semi-equatorial in nature, characterized by high humidity and substantial rainfall. There are two seasons – the wet and dry seasons. The wet season lasts from April to October, while the dry season lasts from November through March.

## Area

**TABLE 1: AREA OF NIGERIA BY STATE**

States	Hectares	Square Kilometres	Acres	Square Miles
Abia	490,000	4,900	1,205,400	1,914.06

## Climate

As in most of West Africa, Nigeria's climate is characterized by strong latitudinal zones, becoming progressively drier as one moves north from the coast. Rainfall is the key climatic variable, and there is a marked alternation of wet and dry seasons in most areas. Two air masses control rainfall--moist northward-moving maritime air coming from the Atlantic Ocean and dry continental air coming south from the African landmass. Topographic relief plays a significant role in local climate only around the Jos Plateau and along the eastern border highlands.

In the coastal and southeastern portions of Nigeria, the rainy season usually begins in February or March as moist Atlantic air, known as the southwest monsoon, invades the country. The beginning of the rains is usually marked by the incidence of high winds and heavy but scattered squalls. The scattered quality of this storm rainfall is especially noticeable in the north in dry years, when rain may be abundant in some small areas while other contiguous places are completely dry. By April or early May in most years, the rainy season is under way throughout most of the area south of the Niger and Benue river valleys. Farther north, it is usually June or July before the rains really commence. The peak of the rainy season occurs through most of northern Nigeria in August, when air from the Atlantic covers the entire country. In southern regions, this period marks the August dip in precipitation. Although rarely completely dry, this dip in rainfall, which is especially marked in the southwest, can be useful agriculturally, because it allows a brief dry period for grain harvesting.

From September through November, the northeast trade winds generally bring a season of clear skies, moderate temperatures, and lower humidity for most of the country. From December through February, however, the northeast trade winds blow strongly and often bring with them a load of fine dust from the Sahara. These dust-laden winds, known locally as the harmattan, often appear as a dense fog and cover everything with a layer of fine particles. The harmattan is more common in the north but affects the entire country except for a narrow strip along the southwest coast. An occasional strong harmattan, however, can sweep as far southern zone of the country, providing relief from high humidities and pushing clouds of dust out to sea.

Given this climatological cycle and the size of the country, there is a considerable range in total annual rainfall across Nigeria, both from south to north and, in some regions, from east to west. The greatest total precipitation is generally in the southeast, along the coastal area of Bonny and east of Calabar, where mean annual rainfall is more than 4,000 millimeters. Most of the rest of the southeast receives between 2,000 and 3,000 millimeters of rain per year, and the southwest (lying farther north) receives lower total rainfall, generally between 1,250 and 2,500 millimeters per year. Moving north from Ibadan, mean annual rainfall in the west North of Kaduna, through the northern Guinea savanna and then the Sudan savanna zones, the total rainfall and the length of the rainy season decline steadily. The Guinea savanna starts in the middle belt, or southern part of northern Nigeria. It is distinguished from the Sudan savanna because it has more trees whereas the Sudan few trees and rainy seasons decline correspondingly in length as one moves northwards.

The regularity of drought periods has been among the most notable aspects of Nigeria climate in recent years, particularly in the drier regions in the north. Experts regard the twentieth century as having been among the driest periods of the last several centuries; the well publicized droughts of the 1970s and 1980s were only the latest of several significant such episodes to affect West Africa in this century. At least two of these droughts have severely affected large areas of northern Nigeria and the Sahel region farther north. These drought periods are indications of the great variability of climate across tropical Africa, the most serious effects of which are usually felt at the drier margins of agricultural zones or in the regions occupied primarily by pastoral groups.

Temperatures throughout Nigeria are generally high; diurnal variations are more pronounced than seasonal ones. Highest temperatures occur during the dry season; rains moderate afternoon highs during the wet season. Although average temperatures vary little from coastal to inland areas, inland areas, especially in the northeast, have greater extremes. There, temperatures reaches its highest peak before the onset of the rains and drop to its lowest level during an intrusion of cool air from the north from December to February.

## **CHAPTER 2 POPULATION**

### **Brief Historical background of Population Censuses in Independent Nigeria**

The history of census taking in independent Nigeria has been riddled with controversies. Censuses in pre-independence colonial Nigeria were neither conducted synchronously nor as per modern principles of population enumeration. The first census in independent Nigeria was conducted in 1962 but had to be cancelled after declaration of the result, as it did not meet the 'expectations' of the political elite. Another census was conducted in 1963, which was ultimately accepted politically. However, in absence of any other reliable population figures for several years, the result of the 1963 census formed the bases of planning and political governance. Another census was attempted in 1973 by the military regime but after conducting the census, the results were declared annulled by the government.

No census could be conducted in the 1980's and in 1991 the then military government conducted a census. The provisional results were declared in 1992 but the final results could only be accepted by government only in October, 1997. Although not everyone either in the country or outside accepted the results of 1991, over the years by and large there was general consensus that the 1991 results were fair representation of the national and regional populations. With the installation of democratic government in 1999, attempts were made to hold a census at the beginning of the new century but these effort could not materialized. With the return of the same democratically elected government in 2003, more efforts at the governmental level were made to conduct a census which finally culminated in holding it in March, 2006.

Thus, it is clear that our country has a long way to go and establish a tradition of conducting periodical censuses every ten years and allow it to be an administrative and technical exercise devoid of politics of numbers, region or ethnicity. The overall acceptibility of the census therefore should be viewed by all stakeholders in light of these historical facts with a view to strengthen the process of conducting census regularly and at definite intervals.

The constitution of Nigeria mandates the National Population Commission (NPOPC) to carry out population census in the country and provide accurate and reliable census results. The primary objective of the census results is to assist the country in knowing as accurate and reliable as possible within the constraints, the population size, its composition and distribution. The population figures and characteristics arising out of census help the country to meet its developmental, administrative and political needs and provide inputs while planning for improving the quality of life of our country men and women. Accordingly, the population and housing census 2006 was carried out from the 21<sup>st</sup> to 25<sup>th</sup> March, 2006 and extended by two days to facilitate enumeration of population on a de-facto basis. It was followed by the post Enumeration Survey (PES) in June, 2006.

## **CHAPTER 3 HOUSEHOLD STATISTICS**

This chapter presents data on socio-economic indicators of households in Nigeria. These indicators are derived from the regular surveys conducted by the NBS through the General Households Survey, which data set are rich for social trend research and other analysis. There are also statistical tables on housing conditions and population distribution of households.

The Core Welfare Indicators Questionnaire Survey (CWIQ) is designed to collect household data for quantitatively profiling the well-being of the population. The 2006 CWIQ was a nationwide sample survey conducted to produce welfare indicators for the population at the national and sub-national levels, particularly Zones, States and Senatorial Districts. The survey complements the 2004 Nigerian Living Standards Survey (NLSS) of the NBS, which profiled poverty in the country. Both surveys provide information for evidence-based policy actions as well as for the monitoring and evaluation of poverty alleviation projects along the dictates of Millennium Development Goals (MDGs).

CWIQ was conducted using the National Integrated Survey of Households (NISH), also designed by the NBS. A representative sample of urban and rural households was selected in each of the 36 States and the Federal Capital Territory (FCT), Abuja.

This chapter also presents tables reflecting spread and trends in poverty levels in Nigeria. For many years, poverty was defined in terms of lack of income necessary to ensure access to a set of basic needs. Over the years, the concept was redefined to mean not only the lack of income but also the lack of access to health, education and other services. More recently the definition has been extended to include powerlessness, isolation, vulnerability and social exclusion.

## CHAPTER: 4 HEALTH

This chapter presents statistics on health delivery services in the country. These services are provided by the Federal Government, State Governments, Missionaries, Corporate Organizations, Private Agencies and Individuals. The data covers key health indicators, including number of health establishments, ownership, reported cases and deaths from notifiable diseases, and health personnel.

Other data include breastfeeding, crude birth rate, crude death rate, and percentage of children less than 1 year not immunized, percentage of women currently using family planning, reported malaria cases and deaths from malaria and knowledge of contraceptive methods by women.

In this edition, new tables as indicated below have been added in this chapter. These include:

### **Fertility:**

The table on fertility shows age-specific fertility rates for women by five-year age groups and the current fertility for the three-year period preceding the 2008 National Demographic Health Survey (NDHS). Age-specific and total fertility rates were calculated directly from the birth history data. The sum of age-specific fertility rates (known as the total fertility rate or TRF) is a summary measure of the level of fertility. It can be interpreted as the number of children a woman would have by the end of her child bearing years if she were to pass through those years bearing children at the current observed age-specific rates. If fertility were to remain constant at current levels, a Nigerian woman would bear an average of 5.7 children in her life time.

The phenomenon of rural-urban variation in fertility also holds true as the table equally indicates that women in rural areas will give birth to more than one more child during their reproductive years than urban women.

### **Family Planning:**

Family planning refers to a conscious effort by a couple to limit or space the number of children they want to have through the use of contraceptive methods. Information on the knowledge and use of family planning methods was obtained from female respondents by asking them to mention any ways or methods by which couple could delay or avoid pregnancy. Therefore table 159.1–159.4 reveals that the contraceptive prevalence rate (CPR) is 15 percent among currently married women using any method of contraception. The data reveal an increase in CPR from 13 percent in the NDHS 2003.

### **Maternal Care:**

Proper care during pregnancy and delivery is important for both the mother and the baby. In the 2008 NDHS, women who had given birth in the five years preceding the survey were asked a number of questions about maternal care. Therefore, table 160.1–160.2 shows the percentage of women who had a live birth in the five years preceding the survey who received antenatal care from a health professional for the last live birth and whose live birth was protected against neonatal tetanus, and among all live births in the five years before the survey, percentage delivered by a health professional and percentage delivered in health facility, by background characteristics

### **Breastfeeding:**

Breastfeeding is sufficient and beneficial for infant nutrition in the first six months of life. The NDHS 2008 collected data on infant and young child feeding practices for all children born in the five years preceding the survey. Table 156 shows the data among youngest children under three years living with their mother, percentage distribution by breastfeeding status and the percentage currently breastfeeding amongst others

### **Nutritional Status of children:**

Anthropometric indicators for young children were collected in the 2008 NDHS to provide outcome measures of nutritional status. The indices in this table are expressed as a standard

deviation units from the median for the reference group. Children who fall below minus two standard deviation (-2 SD) from the median of the reference population are regarded as moderately malnourished while those who fall below minus three standard deviations (-3 SD) from the median of the reference population are considered severely malnourished. Table 161.1–161.2 of 2008 NDHS shows the percentage of children under five years classified as malnourished according to three anthropometric indices of nutritional status: height-for-age, weight-for-height, and weight-for-age by background characteristics

### **Early Childhood Mortality**

Infant and child mortality rates are basic indicators of a country's socioeconomic situation and quality of life. Estimates of childhood mortality are based on information collected in the birth history section of the questionnaire administered to individual women. Table 157 presents infant and child mortality estimates based on the data from 2008 NDHS for the five years immediately preceding the survey (2004 – 2008) The rates are estimated directly from the birth history information on the child's birth date, survivorship status, and the age at death for children who died

### **Ownership of Mosquito Nets**

The table on the Ownership of mosquito nets shows the percentage of households with at least one and more than one mosquito net (treated or untreated), and the percentage of households that have at least one and more than one Insecticide Treated Net (ITN), by background characteristics, NDHS 2008.

### **Malaria Indicators**

The data presented in table 162 shows possession and use of mosquito nets, preventive malaria treatment during pregnancy, and treatment of children with fever using antimalaria drugs, by urban-rural residence

**TABLE 162: MALARIA INDICATORS, 2008**

Malaria Indicators	Urban		Rural		Total	Number
	Percentage	Number	Percentage	Number	Percentage	
<b>Mosquito Nets</b>						
Percentage of household with at least one mosquito net (treated or untreated)	14.0	12,443	18.6	21,627	16.9	34,070
Percentage of household with at least one insecticide treated net (ITN) <sup>1</sup>	8.6	12,443	7.6	21,627	8.0	34,070
Percentage of Children under 5 who slept under mosquito net the night before the survey.	10.5	8,023	12.7	17,761	12.0	25,783
Percentage of Children under 5 who slept under insecticide treated net (ITN) the night before the interview <sup>1</sup> .	6.5	8,023	5.0	17,761	5.5	25,783
percentage of pregnant women age 15-49 who slept under a mosquito net the night before the interview	8.9	1,071	13.2	3,327	11.9	4,397
percentage of pregnant women age 15-49 who slept under an insecticide treated net (ITN) the night before the interview <sup>1</sup>	4.7	1,071	4.9	2,327	4.8	3,397
<b>Preventive Malaria Treatment Durring Pregnancy</b>						
percentage of last birth in the 5 years preceding survey for which the mother took anti-malarial drugs for prevention during the pregnancy	44.8	5,424	28.5	12,210	33.5	17,635
percentage of last birth in the 5 years preceding survey for which the mother got Intermittent Preventive Treatment (IPT) durring an antenatal visit <sup>2</sup>	10.2	5,424	4.9	12,210	6.5	17,635
<b>Treatment of fever</b>						
Among children under age 5 with fever in the two weeks preceding the survey, percentage who took anti-malaria drugs	42.4	1,011	30.2	2,956	33.3	3,968
Among children under age 5 with fever in the two weeks preceding the survey, percentage who took anti-malaria drugs the same day/next day after developing fever	19.9	1,011	13.7	2,956	15.3	3,968

Source: National Population Commission, NDHS

Note: <sup>1</sup> An Insecticide Treated Net (ITN) is a permanenet net that does not require any treatment, a pretested net obtained within the last 12 months, or a net that has been soaked with insecticide within the past 12 months

<sup>2</sup> Intermittent Preventive Treated Net (ITN) is a preventive treatment with at least two doses of SP/Fansidar/Amalar/Maloxine during antenatal visit.

## CHAPTER 6 EDUCATION

This chapter presents data concerning formal education at various levels in Nigeria. The educational system in the country is based on 6-3-3-4 system, that is, 6 years of primary, 3 years of junior secondary, 3 years of senior secondary school and 4 years of university or undergraduate education leading to the award of a degree. This system is designed to make education functional and render outputs employable and self-reliant. It is also to encourage vocational and technical education that would be relevant to the needs of the society. The junior secondary school is both pre-vocational and academic. At the senior secondary level, technical, commercial and other vocational courses are included to make the school leavers employable and relevant.

**Colleges of Education** are responsible for the training of middle-level manpower in teacher education. Students are trained for three years, on completion of which they are awarded the Nigeria Certificate in Education (NCE). As professional teachers, they can teach in primary, Junior Secondary (JS) or Senior Secondary (SS) schools, depending on their areas of specialization.

**Polytechnics and Colleges of Technology** are mainly to produce middle-level technical manpower at the sub-professional level of two categories: National Diploma (ND) and Higher National Diploma (HND). These institutions are supervised by the National Board for Technical Education (NBTE).

**Universities constitute** the third tier of higher education in Nigeria. Admissions into first degree courses are through tests conducted by the Joint Admissions and Matriculation Board (JAMB) or by direct entry with the Higher School Certificate or its equivalent. The basic admission requirement is Senior School Certificate with a minimum of five credits, including English Language, Mathematics and other subjects relevant to the proposed course of study.

This chapter also presents data on admission into Nigeria Civil Aviation School, as well as membership of the Teachers Registration Council of Nigeria (a professional body) and Education Trust Fund Intervention in Educational Institutions. The data cover enrolment, number of schools, student out-turn, manpower, funding, among other statistics.

## CHAPTER 7 EMPLOYMENT

This chapter presents data on employment in selected sectors of the economy and on unemployment. Unemployment estimation adopted by Nigeria is based on 39 hours of work in a week, rather than the International Labour Organisation (ILO) definition of one-hour work in a week.

Other data cover employment creation programmes undertaken by the National Directorate of Employment, employment in the civil service, registered unemployment and vacancies declared, trade disputes, among others.

**TABLE 338: TOTAL EMPLOYMENT BY ECONOMIC ACTIVITY, 2005 - 2009**

Description	Number				
	2005	2006	2007	2008	2009

## CHAPTER 8 AGRICULTURE

This chapter presents statistics on agriculture covering the crops, livestock, fisheries and forestry sub-sectors.

Estimates of crop hectarage, yield and production by National Bureau of Statistics are based on sample survey data obtained from farming households. Annual inventory of livestock and estimates of livestock and poultry production were prepared by the Livestock Department of Federal Ministry of Agriculture and Rural Development (FMARD) and National Bureau of Statistics based on information from farmers and Agricultural Sample Surveys.

The principal source of data relating to fisheries is the Fisheries Department of the FMARD. The data include quantity of fish caught annually by species within the waters of the maritime and inland States, production of fish by sectors, imports and estimated numbers of fishing craft and fishermen.

The data on forestry show the area of reserves and plantations by State.

## **CHAPTER 9**

### **MANUFACTURING, PRODUCTION AND CONSUMPTION**

This chapter presents data on manufacturing, mining, iron & steel, electricity production and consumption.

The **manufacturing** tables shows the production and value of selected items, distribution of establishments by activity, group and size, type of ownership, number of workers engaged, VAT registration and distribution of establishments by State and size.

Nigeria is endowed with different types of mineral resources. The relevant tables present data on solid minerals, crude oil, gas, refinery output and finished products and consumption of finished petroleum products.

The **iron and steel** tables provide data on installed plants by type and capacity, consumption of raw materials and production.

The tables on **electricity** present data on generation, generation by type of fuel, capacity of generating plants and consumption.

## **CHAPTER 10**

### **TRANSPORTATION AND COMMUNICATIONS**

This chapter presents data on length of Federal Highways, National Uniform Licensing Scheme production statistics, rail transportation (passenger and cargo), railway accidents, assets and freight operations.

There are also statistics on civil air transportation (passenger and cargo), aircraft movement, (international and domestic), ocean-borne commerce, cargo and vessel tonnages, crude petroleum oil shipped at crude oil terminals, container traffic, etc.

Similarly, data are presented on Nigerian Postal Service (NIPOST), which provides mail processing and delivery within Nigeria as well as total number of Post Office Boxes and Private Mail Bags available by State.

The telecommunications industry in Nigeria is regulated by the Federal Government, through the Ministry of Information and Communications, Nigerian Communications Commission and the National Frequency Management Council. The telecommunications environment is presently characterized healthy competition, increasingly discerning consumers and vigilant regulators. Available services include Fixed Telephony, Mobile Telephony, Internet Services and other value added services. There is evidence of rapid growth in demand, usage, density and coverage, making Nigeria the fastest-growing telecoms market on the African continent. The growth in telecom service delivery from 1999 to 2003, for instance, is unprecedented.

## **CHAPTER: 11**

### **FOREIGN TRADE STATISTICS**

Foreign trade statistics are data on Nigeria's merchandise imports and exports. They are compiled from declarations in ASYCUDA files which are captured at Customs entry points throughout the country. Since the mid-1970s, monthly returns of oil producing companies on crude oil lifting have also been used. Nigeria's trade is recorded according to the 'general system' principle.

Total imports comprise goods entered for warehousing and goods (other than those in transit) subsequently re-exported. Imports are valued through cost of commodities, freight and insurance (C.I.F) charges and expenses as well as the cost packages, coverings, wrappings or other purchasing materials and preparation of goods for shipment. These do not include duties and surcharges payable in Nigeria.

Total exports consist of domestic exports and re-exports. Domestic exports include mineral, agricultural and manufactured products from Nigeria. Exports are valued free on board (FOB). which is the cost of the goods to the purchaser abroad, including packaging and all other relevant charges up to the time of their delivery on board the exporting vessel.

Re-exports cover imported goods (other than goods declared 'In Transit' or for trans-shipment subsequently re-exported ex-warehouse).

Commodities are classified according to the harmonized system code.

The following goods are excluded from merchandise imports and exports:

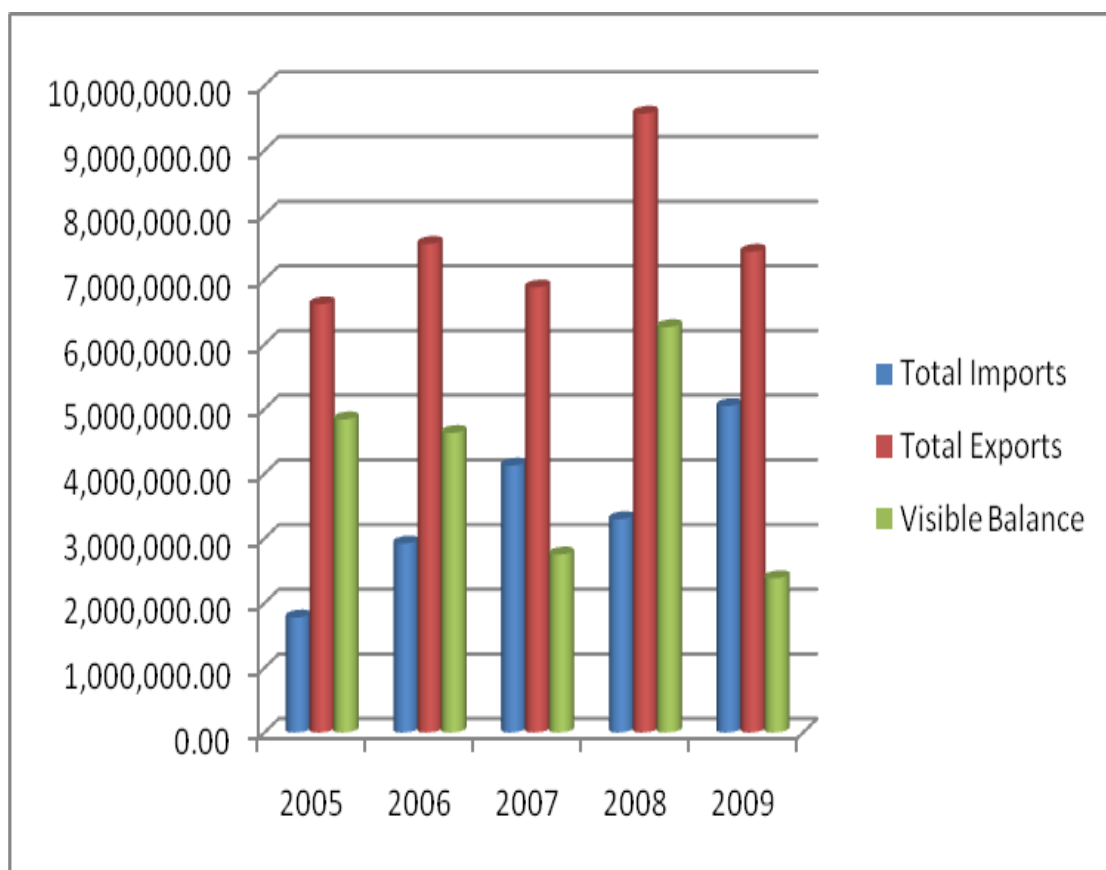

- Monetary gold or silver.
- Goods consigned by the Nigerian Government to her missions stationed abroad.
- Goods intended for exhibitions, commercial samples and gifts in kind.
- Goods in transit.

**TABLE 503: VALUE OF FOREIGN TRADE AND VISIBLE BALANCE, 2005- 2009**

Year	Merchandise Imports (C.I.F.)	Total Exports (F.O.B)	N'million
			Visible Balance

## **CHAPTER 12: BALANCE OF PAYMENTS:**

The external sector of the Nigeria economy has undergone profound changes in recent years particularly in the rapid depreciation of the Naira, the accumulation of payments arrears, the external debt problem etc. These changes along with other aspects of international economic transactions are captured in the Balance of Payments Statistics.

The Balance of Payments (BOP) is defined as a systematic record of economic and financial transactions for a given period between residents of an economy and non-residents (the rest of the world). These transactions involve the provision and receipts of real resources – goods, services and income – and changes in claims on, and liabilities to, the rest of the world.

Specifically, the BOP records transactions in goods, services and income; changes in ownership and in an economy's holding of monetary gold, Special Drawing Rights (SDRs) and claims on and liabilities to the rest of the world.

It also records unrequited or unilateral transfers – the provision or receipt of an economic value without the acceptance or relinquishing of something of equal value (or quid pro quo). General transactions involving payments to a country by non-residents are classified as “credit entries, while those involving payments by the country to non-residents are “debit” entries.

The Balance of Payments table is usually structured into three sections: Current Account, Capital Account and Reserves.

The Current Account comprises the visible and invisible. The visible account consists of exports and imports which are tangible physical commodities, the movement of which constitutes merchandise trade. Exports are “credit” entries as non-residents acquiring goods have to pay for the exporting country. Imports are “debit” entries as the importer has to use his stock of foreign currencies to pay for imports.

The value of exports and imports is recorded “free-on-board” (FOB) to show the actual costs of the goods without insurance and freight, both of which are treated in the invisible section of the current account. The invisibles include services and income account. The services covers freight, insurance and other distributive services involved in international transportation of goods (which represents non-factor services).

Entries will either be credit or debit depending on whether the charges are received or paid by the reporting economy.

The Capital and Financial account records changes in a country's foreign assets and liabilities, capital movements and changes in international investment position. Capital may be long- or short-term, and private or public (government). Investment, as a major component of financial account is "direct" if it creates or establishes a permanent interest in an enterprise. However, investment in long-term bonds and corporate equity constitutes "portfolio investment".

Capital movements may take place between a reporting economy and the rest of the world by injection of new loans and investments into the reporting economy by foreigners. This movement may take the form of increases in foreign-owned deposits in the banks of the domestic (reporting) economy. The latter may decide to recover its loans and investments as well as bank deposits abroad. These are examples of credit entries. Capital flows through new loans, and increases in deposits in foreign banks by the reporting economy, constitute "debit" entries. The capital transfers component of unrequited transfers is included in the capital account of the balance of payments

It should be noted that, in conformity with international standards, the balance of payments' statistics is currently undergoing a comprehensive revision to capture major non-residents' transactions with the aim of tracking down the huge inflows of capital and expand coverage.

## CHAPTER: 13 WAGES, PRICES AND PRICE INDICES

This chapter presents statistics on real take-home salaries in the public sector, housing construction index, summary of value indices of ordinary shares listed on the Nigerian Stock Exchange, Consumer Price Index and average manufacturing capacity utilization rates.

Real take-home monthly wages are used to determine the impact of inflation on nominal wages. This is also a good indication of the level of erosion of the purchasing power of the local currency. The lower, middle and upper income wage earners, especially in the public sector are represented by grade levels 01, 08 and 15.

Generally, a price index is the measure of the proportionate or percentage changes in a set of prices over time. Similarly, consumer price index measures changes in the prices of consumer goods and services acquired by households over time

The conceptual and practical difficulties involved in measuring “uses” or “consumption” has made the adoption of the “acquisition approach” common for Consumer Price Index (CPI) compilation. Only household expenditures involving monetary transactions are utilized for weight derivation. However, prices can be imputed for non-monetary consumptions like rent for owner-occupied accommodation as well as remuneration in kind and own produce.

Retail prices of consumption goods and services are used in the computation of CPI. As prices of different goods and services do not all change at the same rate, a price index can only reflect their average movement.

The CPI changes purely in response to price changes, while the quantities of the goods and services in the basket remain fixed. It is compiled using Laspeyers or Paasche index formula.

**TABLE 516: REAL TAKE-HOME WAGES AND SALARIES IN PUBLIC SECTOR, 2005 - 2009**

Year	Naira Per Month		
	GL. 01	GL. 08	GL. 15
2005	6,476.62	22,059.90	56,512.98
2006	7,421.85	24,868.93	68,793.84
2007	7,421.85	24,868.63	68,793.84
2008	7421.85	24,868.63	68,793.84
2009	5119.53	16297.84	44559.81

Source: National Bureau of Statistics

Note: Real-take home monthly wages and salaries in the public sector reflect the amount realized by deflating nominal salaries/wages with the Consumer Price Index (CPI May 2003 = 1000). Wages and Salaries include basic salary and all allowances, less taxes and other deductions. Real-take home wages /salaries is a milestone for understanding the full impact of inflation on the purchasing power of the local currency.

## **CHAPTER 14 NATIONAL ACCOUNTS**

The national accounts data are classified into twenty-one items. In principle, the accounts cover the full set of integrated economic accounts and balance sheet as stated in the United Nations System of National Accounts (SNA 93). The procedure used for the estimation of Gross Domestic Product (GDP) is based on the production and expenditure approach to estimation of GDP which is internationally accepted.

This full set of accounts is sub-divided into two parts:

- (1) Production Accounts
- (2) Expenditure Accounts

Data for the analysis of 2004, 2005 and 2006 were derived from three main sources, namely:

- (i) Survey of major economic indicators conducted jointly by National Bureau of Statistics (NBS), Central Bank of Nigeria (CBN) and National Communications Commission (NCC)
- (ii) Administrative Statistics earlier collected prior to the survey by the National Accounts Division of the NBS. These were used to fill some data gaps.
- (iii) Input-Output relations established from the previous GDP analysis /estimation by the National Accounts Division of the NBS.

The estimation of intermediate consumption, compensation of employees, capital consumption allowance, indirect taxes and subsidies were independently produced for the survey results.

The following are some of the terms used:

### **Operating Surplus**

The operating surplus measures the surplus or deficit accruing from production before taking account of any interest, rent or similar charges payable on financial or tangible non-produced assets borrowed or rented by the enterprise, or any interest, rent or similar receipts received on financial or tangible non-produced assets owned by the enterprise. It should be noted that for unincorporated enterprises owned by households, the component is called mixed income.

### **Capital Transfers**

These are transactions in which the ownership of an asset (other than cash or inventories) is transferred from one institutional unit to another, in which cash is

transferred to enable the recipient to acquire another asset or in which the funds are realised by the disposal of another asset transferred.

### **Compensation of Employee**

This is income received as remuneration for work. It includes the total remuneration, in cash or in kind, payable by an enterprise to an employee in return for work done by the latter during the accounting period.

It includes not only wage and salary disbursements but also supplements to wages and salaries consumption of fixed capital.

### **Consumption of Fixed Capital**

This term is a measure of the decline in the current values of the stock of fixed assets owned and used by producers as a result of physical deterioration, normal obsolescence, and accidental damages during the accounting period.

### **Current Transfers**

Current transfers consist of all transfers that are not of capital, which directly affect the level of disposable income and should influence the consumption of goods or services.

### **Export of Goods and Services**

A transaction of goods and services (sales, barter, grants) from residents of an economic territory.

### **Factor Cost**

Gross value added at factor cost is not a concept used explicitly in the system but it can easily be derived by subtracting the value of any taxes, less subsidies, on production payable out of gross value added.

### **Government Final Consumption Expenditure**

This consists of expenditure, including imputed expenditure incurred by general government on both individual consumption of goods and services and collective consumption of services.

### **Gross Domestic Product at Constant Prices**

This is the estimate of the value of goods and services produced in an economy at a base year price (real GDP).

**Gross Domestic Product at Current Basic Price**

This is the amount receivable by the producer from the purchaser for a unit of goods or services produced as an output minus intermediate which includes tax payable, subsidy receivable on that unit as a consequence of its production or sale. It excludes any transport charges incurred separately by the producer.

**Gross Fixed Capital Formation**

Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals of fixed assets during the accounting period plus certain additions to the value of non-produced assets (such as sub-soil assets or major improvement in the quantity, quality or productivity of land) realised by the productive activity of institutional units.

**Gross National Disposable Income**

This is derived by adding all current transfers in cash or kind receivable by resident institutional units from non-resident institutional units and subtracting all current transfers in cash or kind payable by resident institutional units to non-resident institutional units.

## **CHAPTER 15**

### **PUBLIC FINANCE**

This chapter presents data on public finance. The public sector indicators are the revenue, expenditure and public debts (domestic and external) of the Federal, State and Local Governments.

Revenue is an inflow of resources or money into the government sector from other economic units/sectors. It includes all non-payable receipts and grants. Grants are non-compulsory, non-repayable unrequited receipts from other governments and international institutions, and are divided into current and capital. While current revenue comprises tax and non-tax receipts within the fiscal year, capital revenue covers receipts from non-financial assets used in production process for more than one year.

Expenditure is an outflow of resources from government to other sectors of the economy, whether required or unrequited. It is divided into recurrent and capital expenditures. Recurrent expenditures are payments for non-repayable transactions within one year, whereas capital expenditures are payments for non-financial assets used in production process for more than one year.

Fiscal deficit represents the difference between government payments for expenditure, net lending and total receipts from revenue, grants and loan repayments. It indicates that payments are higher than total receipts within the fiscal year. When payments are less than total receipts, the fiscal operations of government result in fiscal surplus.

Financing represents changes in government's obligations for future repayments and in liquidity holdings needed to cover deficits or surpluses. Sources of financing are divided into domestic and foreign. Debt (domestic and external) is a stock of liabilities with different tenure accumulation by government operations in the past and scheduled to be fully repaid by government in the future. It covers only recognized direct financial obligations of government on which it pays interest or redemption. External debt figures on the tables are converted to Naira using annual average exchange rate of the particular year.

## **CHAPTER 16 BANKING**

Data on the banking sector include those on financial institutions, money and credits, securities, etc. The Central Bank of Nigeria (CBN) is the apex regulatory authority of the Nigerian financial system; established in 1958 and commencing operations on the 1<sup>st</sup> of July, 1959.

Among its primary functions, the CBN promotes and maintains monetary stability and a sound and efficient financial system in the country. It also issues legal tender currency notes and coins; maintains Nigeria's external reserves to safeguard the national value of the currency; and formulates and implements the monetary and exchange rate policies of the country.

The Bank is a banker and financial adviser to the Federal Government and lender of the last resort to the banks. Similarly, it promotes the growth and development of other financial institutions.

The legal bases of the Central Bank's authority are the CBN Decree (Act) No 24 of 1991 (amended in 1997, 1998 and 1999) and the Banks and Other Financial Institutions Decree (Act) No. 25 of 1991 (amended in 1997, 1998 and 1999), which supersede the CBN Act of 1958 and the Banking Decree of 1996 and later amendments. The current laws generally give the CBN more flexibility in regulating and supervising the banking sector (as well as other financial institutions, which hitherto operated outside any regulatory framework. These include Primary Mortgage Institutions, Finance Companies, Community Banks and Development Financial Institutions).

## **CHAPTER 17 INSURANCE**

The Insurance companies in Nigeria are classified into Life and General, and the industry is regulated by the National Insurance Commission. Insurance policy guidelines are issued annually as part of the regulatory and supervisory tools of the Commission.

The Nigerian insurance sector comprises

- Reinsurance Companies
- Insurance Companies
- Insurance Brokers
- Loss Adjusters
- Agents

The life and general insurance business is categorized as follows:

### **LIFE INSURANCE BUSINESS**

- Individual life insurance business
- Group life insurance business
- Health insurance business

### **GENERAL INSURANCE BUSINESS**

- Fire insurance
- General accident insurance
- Motor vehicle insurance
- Marine and aviation insurance
- Oil and gas insurance
- Engineering insurance
- Bonds, credit guarantee and suretyship insurance
- Miscellaneous insurance

## **CHAPTER 18**

### **GENERAL ELECTIONS AND POLITICAL OFFICE HOLDERS**

Since May 1999, the Federal Republic of Nigeria has been practising the presidential system of Government involving three arms: the Executive, Legislature and Judiciary. Also, there are three tiers of governance, namely Federal, State and Local.

Each of the three tiers is headed by an elected executive: President, Governor and Chairman respectively. Also elected are members of the National Assembly, State Houses of Assembly and the Local Councils. The National Assembly is constituted by a Senate (109 members) and a House of Representatives (360 members). The legislatures at all tiers have the primary responsibilities of making laws and exercising oversight functions over the respective executives.

Under the present system, there have been three General Elections (1999, 2003 and 2007) conducted by the Independent National Electoral Commission (INEC). The Local Government elections are conducted by the various State Independent Electoral Commissions (SIECs).
