v1.1. Edited data

### PRODUCTION DATE

2009-02-21

## Overview

---

### ABSTRACT

The overall concern of the study was to obtain information, which can be used to profile child labour, prioritize and monitor the worrisome problems of working children.

The first specific concern was to determine the categories of the economic activities of children in rural and urban areas and the sectors in which they work in order to obtain valid profile. The survey was designed to identify categories of child labour including unpaid family workers, paid workers in agricultural sectors, apprentices, as well as nomadic activities and household keeping activities of children.

The second concern was the determination of the conditions under which children work, namely; regularity, time-demand, intensity, periods, problems and hazards of work. Moreover, information was obtained on the physical and social environment of work.

The third concern of the survey was to obtain information on the attributes of children who carried out different categories of work such as age, gender, socio-economic status and other circumstances of their families as well as their ages at commencement of work and their educational and health status.

The fourth concern of the study was to determine why children worked. Importantly, the questionnaire items, which provided information on household composition and demographic characteristics, yielded rich

information to determine the reasons why children work.

## KIND OF DATA

Sample survey data [ssd]

## UNITS OF ANALYSIS

Household, children age 5-17

## Scope

---

### NOTES

Coverage and scope

The survey, which had a national coverage, included the 36 states of the federation including the Federal Capital Territory. It was designed to investigate all aspects of work carried out by children in the 5 to 17 years age group.

Identification Division

Characteristics of all members of household aged 5 years and over

Children aged 5 - 17 years

Economic activity of Children aged 5 - 17 years old last months

Household production activity of children 5-17 years of age

# Sampling

## Sampling Procedure

---

The sampling designs for this survey facilitated the provision of estimates at national, zonal, and to a reasonable extent, state levels. The sample design of NISH was used for the household based component while area sampling design was used for the street children component of the child labour survey.

For the household based component of the survey, sixty enumeration areas (EAs) were selected and sensitized in each state while thirty enumeration areas were selected at the Federal Capital Territory (FCT), Abuja. Ten housing units (HUs) were selected in each EA. Members of households within the selected housing units were interviewed. An estimated national sample size of 21,900 was anticipated, while a sample size of 600 households was expected in each state, excepting Abuja with 300 households.

Purposive sampling design was used to obtain samples of 200 to 400 street children in three selected cities in each of the thirty- six (36) states of the Federation. Valuable information obtained from members of the National Union of Road Transport Workers (NURTW) and others facilitated the selection of street children in these cities.

## Response Rate

---

There was a very high response rate in all the states. The response rate for the whole country was 99.2 percent. The response rate in individual states was above 90 percent with the exception of Kebbi State, which had 88.7 percent response rate.

## Weighting

---

No weight attached

# Questionnaires

## Overview

---

The Household questionnaire: This instrument consists of two sections; the first section obtained information on demographic and socio-economic composition of households whilst the second section obtained direct information from the children in households on their schooling, non-schooling and work activities. It also obtained information on the social, psychological and health components of children's work.

Individual questionnaire: This instrument was specifically designed to collect data on the living and working conditions of children on the streets.

# Data Collection

## Data Collection Dates

Start	End	Cycle
2000-12-15	2000-12-31	15 Days

## Data Collection Mode

Face-to-face [f2f]

### DATA COLLECTION NOTES

#### Training

Training was organised at the national and zonal levels for the personnel who participated in the main survey.

#### National training

The trainees at the national level consisted of three categories of officers whose roles were crucial to the successful implementation of the survey, namely: Trainers at the zonal level, Fieldwork monitoring officers and Data processing officers.

#### Zonal level training

The training was organized in six states, representing the six geopolitical zones of the country. The beneficiaries of the zonal training were field staff and coordinators of the Federal Office of Statistics (FOS) comprising of enumerators, interviewers, supervisors, state officers, zonal controllers and state statistical agencies.

#### Fieldwork organization and monitoring level officers

##### Data collection (Team Arrangement)

The FOS permanent field staff that were resident in the enumeration areas were responsible for data collection during the survey. For the household component, each household head or a responsible adult in the household gave information about the household in general, while the children supplied information about themselves. For the street children component, the field staff, equipped with information obtained from members of NURTW and others, visited identified vicinities to locate and interview the children.

The field staff consisted of enumerators, interviewers and supervisors. The field coordination team was composed of the State Officers and Zonal Controllers. The State Officer in each state coordinated all field operations, while the Zonal Controllers in each zone supervised and coordinated the states in their zones.

The field staff in each state were constituted into three roving teams. Each team was made of two enumerators and a supervisor. A team covered 20 EAs in 40 days. In other words, 1 EA was covered in 2 days including inter EA travels. The same team of two enumerators and one supervisor also interviewed between 67-134 street children in each state in about 7-14 days. In other words, a team interviewed an average of 10 street children in a day.

#### Supervision and state quality control

In order to ensure authenticity of collected data, the supervision and monitoring of field operation were carried out at three levels. Firstly, the supervisors of the roving team promptly corrected errors while still within the EA. Secondly, the State Officer visited the field staff occasionally in order to monitor their operations, crosscheck and endorse the completed questionnaires. The Zonal Controller who crosschecked the completed questionnaires submitted to him by the State Officers under his jurisdiction carried out the final level of supervision. To improve the alertness of the field team, the Zonal Controller occasionally visited

some of the states.

#### Supervision and national monitoring

In order to enhance the quality of data collection, a monitoring strategy was devised for members of the technical team from FOS headquarters and other stakeholders, namely; CBN, FMEL&P, NMB, NpopC and NDE

#### Data retrieval

The completed and thoroughly edited questionnaires were submitted by the Supervisors to the State Officers who in turn sent them to their Zonal Offices for onward transmission to Lagos Head Office.

#### Data processing

##### Manual editing

The subject matter staff at the headquarters office carried out the manual editing of the completed questionnaires retrieved from the 36 states of the federation including FCT, Abuja. The manual editing was carried out in order to effect final corrections on errors detected on the completed questionnaires. Such errors included omission, inconsistencies, double entries, impossibility as well as transcription and calculation ones.

##### Data entry/analyses

The staff of Computer Management and Information Services (CMIS) carried out the entry of the edited questionnaires, running programmes to further detect inconsistencies and other related errors as part of final editing. Tables were produced from the analyses.

## Data Collectors

Name	Abbreviation	Affiliation
National Bureau of Statistics	NBS	Federal Government of Nigeria (FGN)

### SUPERVISION

Each state had a supervisor attached to the interviewers in the state except Lagos state where there were more establishments to be covered hence, 4 supervisors were attached. The fieldwork was also monitored by NBS and EFCC Hqtrs staff. Monitoring exercise was carried out by 45 NBS Headquarter staff between 7th – 16th of September, 2007. At least one staff will monitor field work in a state for 10 days. Monitoring officers brought completed records to NBS headquarters in Abuja.

State officers monitored the field work in their various states for 5 days.

Zonal controller monitored the field work in at least two states within the zone for 10 days.

## Data Processing

### Data Editing

---

Data processing was done centrally at NBS Headquarters, Abuja.  
30 Data entry staff and 15 Editors were engaged  
Censuses and Surveys Program (CSPRO) was used for data entry.  
SPSS was used for final analysis

Format: numeric	Invalid: 298
Width: 1	Minimum: 1
Decimals: 0	Maximum: 9
Range: 1-9	Mean: 1.1
	Standard deviation: 0.4

### Literal question

NUMBER OF VISITS:

## Length of interview (in minutes) (Min)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20186
Format: numeric	Invalid: 644
Width: 2	Minimum: 0
Decimals: 0	Maximum: 99
Range: 0-99	Mean: 28.2
	Standard deviation: 15.7

### Literal question

LENGTH OF INTERVIEW (IN MINUTES)

## Tenure (Ten)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20549
Format: numeric	Invalid: 281
Width: 1	Minimum: 0
Decimals: 0	Maximum: 7
Range: 0-7	Mean: 1.8
	Standard deviation: 1.5

### Literal question

1. Tenure

## Monthly rent (Rent)

File: Cover2

### Overview

Type: Continuous	Valid cases: 19486
Format: numeric	Invalid: 1344
Width: 6	Minimum: 1
Decimals: 0	Maximum: 999999
Range: 1-999999	Mean: 2216.4
	Standard deviation: 39391.7

### Literal question

2. Monthly Rent

## Type of dwelling unit (Type)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20293
Format: numeric	Invalid: 537
Width: 1	Minimum: 1
Decimals: 0	Maximum: 5
Range: 1-5	Mean: 1.8
	Standard deviation: 1.3

### Literal question

3. Type of Dwelling Unit

## Number of living rooms .... (Rooms)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20830
Format: numeric	Invalid: 0
Width: 1	Minimum: 1
Decimals: 0	Maximum: 4
Range: 1-4	Mean: 1.8
	Standard deviation: 0.9

### Literal question

4. Number of living rooms ....

## Toilet/bathroom (Toi)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20830
Format: numeric	Invalid: 0
Width: 1	Minimum: 1
Decimals: 0	Maximum: 5
Range: 1-5	Mean: 2.1
	Standard deviation: 1.2

### Literal question

i. Toilet/Bathroom

## Toilet facilities (Fac)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20830
Format: numeric	Invalid: 0
Width: 1	Minimum: 1
Decimals: 0	Maximum: 7
Range: 1-7	Mean: 2.9
	Standard deviation: 2.2

### Literal question

ii. Toilet Facilities

## Kitchen (Kit)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20830
Format: numeric	Invalid: 0
Width: 1	Minimum: 1
Decimals: 0	Maximum: 5
Range: 1-5	Mean: 2
	Standard deviation: 1

### Literal question

iii. Kitchen

## Major source of lighting (Lig)

File: Cover2

### Overview

Type: Continuous	Valid cases: 20830
Format: numeric	Invalid: 0
Width: 1	Minimum: 1

2 INTERESTED

3 PATRONIZING

4 INDIFFERENT

5 VERY INDIFFERENT

### Interviewer instructions

ON THE OVERALL, HOW INTERESTED WAS THE RESPONDENT IN THE INTERVIEW

## How would you assess the respondents sincerity in answering questions (Kq75z)

File: Age2

### Overview

## How would you assess the respondents sincerity in answering questions (Kq75z)

File: Age2

Type: Continuous  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 0-4

Valid cases: 31810  
Invalid: 544  
Minimum: 0  
Maximum: 4  
Mean: 1.3  
Standard deviation: 0.7

### Literal question

HOW WOULD YOU ASSESS THE RESPONDENTS SINCERITY IN ANSWERING QUESTIONS?

- 1 SINCERE
- 2 SOMETIMES SINCERE
- 3 SOMETIME NOT SINCERE
- 4 INSINCERE

## If any, name the section(s) or question number(s) where there are doubts on the responses of the respondent..... (Kq76z)

File: Age2
