Overview	
Type	Other Household Survey [hh/oth]
Identification	NGR-LASG-COS-HHSURVEY-2006-v1.0
Version	Production Date: 2009-10-19 Version 1.0 (October, 2009) <u>Notes</u> Version 1.0: Data used to generate the tables and the report (June, 2008) Labeling of the variables and documenting the literial question(October, 2009)
Series	The Lagos Household Survey 2006, also reffered to as service delivery assesment survey, was the first Baseline Survey under the World Bank assisted Lagos Metropolitan Development and Governance Projects (LMDGP) which started a year earlier in 2005. The household survey was a key component of the Baseline Projects which also consisted of five major economic surveys.

<u>Abstract</u>
The Lagos Household Survey 2006, also reffered to as service delivery assesment survey, was the first Baseline Survey under the World Bank assisted Lagos Metropolitan Development and Governance Projects (LMDGP) which started a year earlier in 2005. The household survey was a key component of the Baseline Projects which also consisted of five major economic surveys.

   The survey's objectives was to provide reliable data on a timely basis for monitoring changes in the welfare status by local government areas in the State, provides estimates at local government level , assess the social and economic situation in the State and provides relevant data required to monitor growth and development in the state ,as well as building the socio-economic database.

Kind of Data	Sample survey data [ssd]
Unit of Analysis	Individuals, households, and communities.

Scope & Coverage

Scope
The scope of the survey describes the modules in the questionaire and include:
 Household charasteristics and household listing
 Type of Housing
 Land and Tenure
 Access to infrastructure-Storm water drainage
 Sanitation
 Water supply
 Solid waste removal
 Energy and Electricity
 Telephone
 Transportation and local roads
 Education
 Health
 Emergency and Policing services
 Community preference
 Household income and expenditure.

Topics	housing [10.1], employment [3.1], working conditions [3.6], unemployment [3.5], basic skills education [6.1]

Geographic Coverage
State
Local Government
Wards

Universe
Household members

Sampling

Sampling Procedure
A sample of 6000 respondents were selected using a combination of probability proportional to size and equal size sample i.e (mix Design) in appreciation of the spread and peculiarities of the state inhabitants and landscapes.

The entire twenty (20) Local government Areas (LGAs) in the state was divided into two Zones: (North comprising 9 LGAs and South having 11 LGAs) with sample size of 3052 respondents and 2948 rspondents respectively.

The first level of stratification comprised the Local Government Areas, with each of them divided into Political Wards (between 10 and 25).
These wards formed the second level of stratification.

Deviations from Sample Design
No deviation from sample design

Response Rate
At both levels of stratification ie Local government Areas (LGAs) and Political Wards,
the Response Rates were 100 percent respectively.

Weighting
No weight computed for this version

Data Collection

Data Collection Dates	60 days: start 2005-06-06
	60 days: end 2005-09-02
Data Collection Mode	Face-to-face [f2f]

Data Collection Notes
The Field trainning on the use of palm top PC loaded questionaire and pre-test for the survey took place from June 12, 2005 - June 17, 2005 and included 10 supervisors and 50 interviewers for the main survey. Also in attendance were 10 staff from office of statistics. The World Bank officials on IT Messrs. Pim Kimenta and Virgine Boucard were on ground to take the fieldworkers through.

Each consulting firm provided 5 supervisors and 25 interviewers and each interviewing team comprised of 5 interviewers (male of female) together with a field editor who also doubled as the supervisor. The supervisors were specially trainned tn the use of Global Positioning System (GPS) to capture Data collection took place over a period of about 4 weeks from July 6, 2005 until September 2nd , 2005.

Interviewing took place everyday throughout the fieldwork period, although interviewing teams were permitted to take one day off per week. Interviews averaged 50 minutes for the household questionnaire and were conducted primarily in English and translated to pidgin English as well as Yoruba native language by interviewer.

Questionnaires
The Questionaire was made up of fifteen (15) modules namely,

Section 1: Household charasteristics and household listing
Section 2: Types of Housing
Section 3: Land and Tenure
Section 4: Access to Infrastructure - Stormy Water Drainage

Section 5: Access to Infrastructure - Sanitation

Section 6: Access to Infrastructure - Water

Section 7: Access to Infrastructure - Solid Waste Removal

Section 8: Access to Infrastructure - Energy and Electricity

Section 9: Access to Infrastructure - Telephone

Section 10: Transportation & Local Roads

Section 11: Education

Section 12: Health

Section 13: Emergency and policing Services

Section 14: Community Preferences

Section 15: Household income and expenditure.

The questionaire was published in English language and was based on the generic one prepared by the world bank but modified to suit the Nigeria/ Lagos state environment. The head of the household was the key respondent in the households , individual members and community level information are included in the instrument.

The questionaires is provided as external resources.

Data Collector(s)	Central Office of Statistics (COS) , Ministry of Economic Planning and Budget

Supervision

Senior management teams of the two consulting outfits provided overall fieldwork coordination and supervision. The Office of Statistics too was on the field to stricktly monitor the field excercise for compliance and logistic assistance. GPS capture to determine the GIS information of the respondents location were also carried out by the supervisors in addition to field editing of the survey instrument on palmtop for effective performance. The directors In the Office office of Statistics also visited the fieldm on periodic basis during the excercise.

The supervisor is also responsible for the uploading of the completed questionaires into the designated laptop

 Each interviewer covered average of 3 households per day, thus each team could complete 75 households (i.e. one zone) per day. An interviewer therefore covered a maximum of 18 households per week, assuming 6 effective working days per week. Hence the sample size of 6000 households were covered within 4 weeks.

Data Processing & Appraisal

Data Editing

The Perseus Software Solution 6 Software which was used to upload survey instruments into the palmtop had in built capacity to download the completed questionaire from the palmtop into the designated laptop for the survey throgh microsoft active synching.

 No data entry involved. however the downloaded dataset are then edited for cleaning and quality checks.

 The data set wasc later transfered/exported to SPSS for more robust analysis.

Other Processing

Survey methodology used a technique of hand-held pocket computer where interviewers entered responses of the heads of households while on the field. Before the commencement of the fieldwork, the pockets PCs were loaded with the copy of the final questionnaire using the Perseus Survey Solutions 6 software which was used to design the questionnaire.

 The software was used to automate the entire process of data capture, evaluation, validating and storage of the data. It permitted fast processing of data and timely release of results. Data were synchronizing from Pocket PC

to laptop every day of the survey week. As part of data quality control, editing was carried out to ensure that the household name, address and Questionnaire number was correct. Also automatic correction was done for some selected fields by the Perseus Survey Solutions application based on some validation rules within the system.

The dataset were later transfered /exported to SPSS format in order to allow for disaggregated analysis at Local government and ward level. Frequency tables and some list of crosstabulation were generated

The Frequency tables and some list of crosstabulatios were generated

Estimates of Sampling Error
Not calculated

Other Forms of Data Appraisal
Some indicators such as average Household size, room density, access to portable water.

Accessibility

Access Authority	Central Office of Statistics (Ministry of Economic Blanning and Budget) , lasgstat@yahoo.com
Contact(s)	Director, Central Office of Statistics (Ministry of Economic Planning and Budget) , lasgstat@yahoo.com

Confidentiality
The dataset is not anonymised, as such, user must comply with the new National Statistical Act of May 2007 and should not use any technique in an attempt to learn the identity of any person, establishment, or sampling unit not identified on public use data files.   likewise, the user should hold in strictest confidence the identification of any establishment or individual that may be inadvertently revealed in any documents or discussion, or analysis. Such inadvertent identification revealed in her/his analysis will be immediately brought to the attention of the data depositor.

Access Conditions
The data can be used for statistical and scientific research purposes only and should not in any way used to report onor investigation of specific individuals or organizations.   No attempt should be made to re-identify respondents, and no use should be made of the identity of any person or establishment discovered inadvertently. Any such discovery would immediately be reported to the Central Office of Statistics

Files Description

- 6 -

Dataset contains 1 file(s)

HH DATASET 05	
# Cases	6001
# Variable(s)	853

File Content
The file contains data relating to Lagos state household

Producer
Lagos State Government Central Office of Statistics, Ministry of Economic Planning and Budget, Alusa, Ikeja

Version
Version 1.0

Processing Checks
Checking of all invalids codes were corrected

Missing Data
All missing data were 99999999.

Notes
There is an extra one respondent in the data given a total of 6001 insteade of 6000 to the data file.

Note: Most of the variable with 0 code were wrong code therefore ignore them when interpreting.

Variables List

Dataset contains 853 variable(s)

Documentation

Questionnaires

Household Questionaire, HH-QUEST, Central Office Of Statistics, Ministry Of Economic Planning And Budget, October 2009, Nigeria [nga], English [eng], "doc\Lagos state HH questionaire final june 2005[1].pdf"

Description
Household Questionnaire for data collection

Abstract
The aim of this survey is to collect information on social services such as water, electricity, drainage and gather your views on community development. The interview will take less than an hour. Your response will assist the state government in understanding the barriers to improved quality of life.

Description

The household Slide Presentation

Abstract

The Central Office of Statistics (COS) in conjunction with the World Bank recently embarked on Service Delivery Assessment Survey (Household Survey) ,a component of Baseline Data Projects under the Lagos Metropolitan Development and Governance Projects (LMDGP) with the main objective of establishing a baseline data that will provide meaningful input into Lagos State Economic Empowerment Development Strategy (LASEEDS) and Lagos Metropolitan Development Governance Project (LMDGP) as well as inform people oriented programmes and policies decisions.
