Overview	
Type	Agricultural Survey [ag/oth]
Identification	NGR-NBSCBNNCC-CROP-2006-v1.0
Version	Production Date: 2008-08-06 ver 1.0
Series	This Private farmer-Crop is the 3rd in the series of Collaborative effort of the National Bureau of Statistics (NBS), Central Bank of Nigeria (CBN) and the Nigeria Communications Commission previously conducted in 2004, 2005 and 2006 being the current one. However the Private farmer-Crop is a regular survey of the National Bureau of Statistics conducted on quarterly basis before the collaboration was initiated
<p><u>Abstract</u></p> <p>The Private farmer-Crop is a brainchild of the National Bureau of Statistics (NBS) and is often referred to as Regular survey carried out on quarterly basis by the NBS over the years. In recent times, starting from 2004 to be precise, there is a collaborative effort between the NBS and the CBN in 2004 and 2005 and in 2006 the collaboration incorporated Nigerian Communications commission (NCC). The main reason of for conducting the survey was to enable the collaborating agencies fulfil their mandate in the production of current and credible statistics, to monitor and evaluate the status of the economy and the various government programmes such as the National Economic Empowerment and Development Strategy (NEEDS) and the Millennium Development Goals (MDGs).</p> <p>The collaborative survey also assured the elimination of conflicts in data generated by the different agencies and ensured a reliable, authentic national statistics for the country.</p> <p>Total sample sizes of 32,850 Farming Housing Units (FHUs) were drawn from 2,190 EAs. In each state, 900 FHUs drawn from 60 EAs were studied. Four hundred and fifty (450) FHUs from 30 EAs were studied in (FCT), Abuja. The listings of housing units in the selected EAs were updated before they were stratified into farming and non-farming housing units. The farming housing units were further stratified into Crop Farming Housing Units (CFHU), Livestock Farming Housing Units (LFHU) and Fishing Farming Housing Units (FFHUs). In each EA, 5 FHUs were studied for crop farming, 5 FHUs were covered for livestock and 5 FHUs for fishery. At each level of selection, housing units were systematically selected using different random start. Table 1.2 reflects the stratification procedure prior to selection within each sub-population.</p> <p>All households in the HUs that qualified as farming households were served with relevant private farmers questionnaires.</p>

Sampling

Sampling Procedure

Total sample sizes of 32,850 Farming Housing Units (FHUs) were drawn from 2,190 EAs. In each state, 900 FHUs drawn from 60 EAs were studied. Four hundred and fifty (450) FHUs from 30 EAs were studied in (FCT), Abuja. The listings of housing units in the selected EAs were updated before they were stratified into farming and non-farming housing units. The farming housing units were further stratified into Crop Farming Housing Units (CFHU), Livestock Farming Housing Units (LFHU) and Fishing Farming Housing Units (FFHUs). In each EA, 5 FHUs were studied for crop farming, 5 FHUs were covered for livestock and 5 FHUs for fishery. At each level of selection, housing units were systematically selected using different random start. Table 1.2 reflects the stratification procedure prior to selection within each sub-population. All households in the HUs that qualified as farming households were served with relevant private farmers questionnaires.

For NASS (Private Farmers) $\hat{Y}_i = \frac{1}{n} \sum_{j=1}^m \sum_{k=1}^K X_{ijk}$

$$\hat{Y}_i = \frac{1}{n} \sum_{j=1}^m \sum_{k=1}^K X_{ijk}$$

FH = Total number of farming housing units listed.

$$n = \sum_{j=1}^m \sum_{k=1}^K X_{ijk}$$

$$n = \sum_{j=1}^m \sum_{k=1}^K X_{ijk}$$

$$n = \sum_{j=1}^m \sum_{k=1}^K X_{ijk}$$

$$n = \sum_{j=1}^m \sum_{k=1}^K X_{ijk}$$

j=1 k=1 Where

\hat{Y}_i = Estimate for states

N_i = Total number of EAs in the ith State

n_i = Selected number of EAs in the ith State

FH = Total number of farming housing units listed.

m = Selected number of farming housing units

X_{ijk} = Value of the element in the kth housing unit of jth EA in the ith state.

W_{ijk} = Weight of the element in kth housing unit of the jth EA in the ith state.

National Estimate: $\hat{Y}_N = \sum_{i=1}^37 \hat{Y}_i$

$$\hat{Y}_N = \sum_{i=1}^37 \hat{Y}_i$$

where \hat{Y}_N is the National Estimate and

\hat{Y}_i is the Estimate for states .

Deviations from Sample Design

Variance Estimate (Jackknife Method)

Estimating variances using the Jackknife method will require forming replicate from the full sample by randomly eliminating one sample cluster [Enumeration Area (EA) at a time from a state containing k EAs, k replicated estimates are formed by eliminating one of these, at a time, and increasing the weight of the remaining (k-1) EAs by a factor of k/(k-1). This process is repeated for each EA.

For a given state or reporting domain, the estimate of the variance of a rate, r, is given by

$$\text{Var}(r) = (\text{Se})^2 = \frac{1}{k(k-1)} \sum_{i=1}^k S (r_i - r)^2$$

where (Se) is the standard error,

k is the number of EAs in the state or reporting domain.

r is the weighted estimate calculated from the entire sample of EAs in the state or reporting domain.

$$r_i = kr - (k - 1)r(i), \text{ where}$$

r(i) is the re-weighted estimate calculated from the reduced sample of k-1 EAs.

To obtain an estimate of the variance at a higher level, say, at the national level, the process is repeated over all states, with k redefined to refer to the total number of EAs (as opposed to the number in the states).

Response Rate

The response rate is high

Weighting

The variable (Rf) raising factor is computed and attached to the data file.

Data Collection

Data Collection Dates	23 days: start 2007-03-03 23 days: end 2007-03-26
-----------------------	--

Time Period(s)	23 days: start 2007-03-03 23 days: end 2007-03-26
----------------	--

Data Collection Mode	Face-to-face [f2f]
----------------------	--------------------

Data Collection Notes

Prior to the commencement of data collection, training was conducted at two levels; Training of trainers and zonal level trainings. This training was to equip trainers and trainees with background information about the survey and what is expected of them. Also, training sessions included classroom teaching, demonstration, mock interviews, role playing, field and home exercises. The crop production Survey a household based exercise, in each state of the federation 3 teams were used comprising of 3 supervisors and 12 enumerators. A team was made up of one Supervisor and four Enumerators. Each team covered 20 Enumeration Areas (EA) for a period of 22 days. A pair of enumerators in a team covered 10 EAs.

Questionnaires

The questionnaire for the crop is a structured questionnaire based on household characteristics with some modifications and additions. The House project module is a new addition and some new questions on ICT. The questionnaires were scanned

Data Collector(s)	
-------------------	--

Supervision

As earlier stated the data collection exercise involved team made up of 3 interviewers and 1 supervisor. The

supervisor assigns EAs to the interviewers and ensure that their job is properly edited at the end of the day
 Retrieval of records was carried out in two stages. The first stage retrieval was implemented by CBN Headquarter Staff during the monitoring visit to the states and zones. The second retrieval was done during the monitoring visit of NBS Headquarter staff. A mop-up exercise was carried out by the NBS state officers and Zonal controllers for 10 days after the scheduled period for data collection and sent to NBS headquarters.
 Table 1.7 depicted the retrieval position of Private farmers survey.

Data Processing & Appraisal

Data Editing

The data editing is in 2 phases namely manual editing before the questionnaires were scanned. This involved using editors at the various zones to manually edit and ensure consistency in the information on the questionnaire. The second editing is the computer editing, this is the cleaning of the already scanned data.

Other Processing

DATA PROCESSING/ANALYSIS The data processing analysis involved six main stages: development of data entry program; training of data processing staff; manual editing and coding; data entry and scanning; computer editing, verification and conversion and table generation. Integrated Microcomputer Processing Systems (IMPS) was one of the specialized Statistical packages used to develop the data entry program. The Disk Operating System (DOS) version of the software can support multiple screens required to capture data from the various survey instruments. With the introduction of scannable questionnaires for General Household and Modern Agricultural Holding, another new software package called Teleform was used. The indicators on household surveys were obtained using the Statistical Package for Social Scientists (SPSS) while the indicators on establishment surveys were obtained using MS-ACCESS and MS-EXCEL. Others indicators on Prices, Trade, National Accounts and Agricultural Survey made use of MS-Office (Access and Excel). The tabulation and analysis of the three survey systems were implemented by diligent and capable staff of the collaborative agencies.

Other Forms of Data Appraisal

QUALITY CONTROL AND RETRIEVAL OF RECORD

The Quality Control measures were carried out during the survey, essentially to ensure quality of data. There were three levels of supervision involving the supervisors at the first level, CBN staff, NBS State Officers and Zonal Controllers at second level and finally the NBS/NCC Headquarter staff constituting the third level supervision. Field monitoring and quality check exercises were also carried out during the period of data collection as part of the quality control measures.

Confidentiality

The confidentiality of the individual respondent is protected by law (Statistical Act 2007)
This is published in the Official Gazette of the Federal republic of Nigeria No. 60 vol. 94 of 11th June 2007. See section 26 para.2. Punitive measures for breeches of confidentiality are outlined in section 28 of the same Act.

Access Conditions

A comprehensive data access policy is been developed by NBS, however section 27 of the Statistical Act 2007 outlines the data access obligation of data producers which includes the realease of properly anonymized micro data.

Description

The report of Socio Economic Survey on crop production a Collaboration between National Bureau of Statistics, Central Bank of Nigeria(CBN)and Nigerian Commnications Commision (NCC)

Abstract

The 2006 annual collaborative Survey of Socio-Economic Activities in Nigeria is a follow-up of the 2005. The survey was a further improvement over the previous round in that the scope was enlarged to meet more mandates of the three agencies. The survey was jointly implemented by the National Bureau of Statistics, the Central Bank of Nigeria and the Nigerian Communication Commissions between February to June 2007.

The survey which cut across the three survey infrastructures of NBS had enabled the three collaborating agencies fulfilled their key mandates in the production of current, timely and credible statistics to monitor and evaluate the current status of the economy and various government programmes, such as the National Economic Empowerment and Development Strategy (NEEDS) and the Millennium Development Goals (MDGs).

The project produced series of socio-economic data through households and establishments, and also through the compilation of administrative data sets from public and private institutions. The results and findings from the survey were adequate, credible and current for meaningful monitoring and evaluation of programmes and policies and also for policy

Socio Economic Survey-Crop Questionnaire-2006

Socio Economic Survey-Crop Tables-2006, NBSCBNNCC-Crop Tables, National Bureau of Statistics (NBS), August 2008, Nigeria [nga], English [eng], "Doc\ICT crop tables.xls"

Description

The table generated on Socio Economic Survey of crop production a Collaboration between National Bureau of Statistics, Central Bank of Nigeria(CBN)and Nigerian Communications Commision (NCC)

Abstract

Maize had the highest land area cultivated among the major crops grown in Nigeria with a figure of 4,670 thousand hectares. This was closely followed by Guinea Corn 4,578 thousand hectares and Millet 4,270 thousand hectares. Cassava had the highest crop production in 2006, with production figures of 38,041 thousand tonnes, yam 28,280 thousand tonnes and melon had the least figure of 357 thousand tonnes. Thirty seven percent of the total persons engaged in farming activities are female. 23 percent are working proprietors, 47 percent unpaid family member 28 percent paid employee and a mere 2 percent were apprentices. About 99,138 thousand tonnes was the total production of eleven major crops in 2006. Cassava constituted 38.37 percent, Yam 28.53 percent and least was melon 0.40 percent. Farmgate prices were available for the eleven major crops. Average price per kilogram was highest for Melon N39.68 and cotton N33,44 while Rice was N25.84. Most farmers solo their product through open market. The major problems confronting crop farmers are lack of funds, better infrastructure such as roads, seedling (improved) and good weather.
