COVID-19 National Longitudinal Phone Survey

(COVID-19 NLPS)

Round 3

Summary Tables

August 2020

Background

Nigeria was among the first countries in Sub-Saharan Africa to identify cases of COVID-19. The Government has since implemented strict measures to contain the spread of the virus. Additionally, global oil prices plummeted by a dramatic 60% following the spread of the pandemic and since the oil sector accounts for the bulk of government revenue, this is expected to substantially weaken the Nigerian economy. The federal government will have fewer resources available to simultaneously combat the public health crisis of COVID-19 and a weakening economy.

In order to track the impacts of the pandemic, the National Bureau of Statistics implemented the **Nigeria COVID-19 National Longitudinal Phone Survey (COVID-19 NLPS)** on a nationally representative sample of 1,950 households. COVID-19 NLPS households were drawn from the sample of households interviewed in 2018/2019 for Wave 4 of the General Household Survey—Panel (GHS-Panel). The extensive information collected in the GHS-Panel just over a year prior to the pandemic provides a rich set of background information on COVID-19 NLPS households which can be leveraged to assess the differential impacts of the pandemic in the country.

The tables contained presented below are from the third round of the Nigeria COVID-19 National Longitudinal Phone Survey (COVID-19 NLPS) 2020. The third round was implemented by the National Bureau of Statistics (NBS) in July 2020. These same households will be contacted in subsequent waves of the COVID-19 NLPS. The data are representative at the national level and survey weights were calculated to adjust for non-response and undercoverage.

The data are available through the NBS web site: https://nigerianstat.gov.ng/nada/index.php/catalog/63

or through the World Bank's Microdata Library: https://microdata.worldbank.org/index.php/catalog/3712
