Overview

ABSTRACT

Home to over 200 million people, Nigeria is the most populous country on the African continent and the seventh largest in the world. The United Nations forecasts that the population will double by 2050, making it the third largest country in the world (UNDESA, 2019). Given Nigeria's size and growth potential, the pressure to safeguard and improve the lives of its citizens is significant. Nigeria was still recovering from its 2016 economic recession when another recession hit in 2020 due to the effects of the COVID-19 pandemic, further derailing its economic recovery. While the COVID-19 regulatory measures implemented in Nigeria helped to control the spread of the virus, many of these necessary and lifesaving measures had deleterious effects on livelihoods, health, human wellbeing, state-society relations and social harmony.

The Nigerian economy has grown post-COVID, with the real Gross Domestic Product (GDP) growth rate rising from -1.92% in 2020 to +3.40% in 2021. Despite this economic recovery, the lingering impact of the 2020 recession has undermined household welfare and exacerbated poverty and vulnerability.

In August 2019, the President of Nigeria committed to empowering an additional 100 million people to escape extreme poverty by 2030. This means that, on average, 10 million people must be lifted out of poverty each year, starting from 2020. With the adverse impact of COVID-19 on livelihoods, and unemployment, this challenge has become even more important.

It is within this context that the Nigeria MPI (2022) survey was conducted across the 109 senatorial districts, establishing a baseline for the local government area (LGA) survey due in 2023, and future two-yearly national surveys.

In 2018, Nigeria published its first national MPI, constructed by the National Bureau of Statistics, in the Human Development Report (UNDP, 2018). However, subsequent consultations with stakeholder groups concluded that additional indicators were needed to accurately reflect poverty following the pandemic—including among children. The Nigeria MPI (2022) survey questionnaire therefore included additional variables that were relevant given the new context and national priorities—such as food security, water reliability, underemployment, security shocks, school lag and child deprivations.

The Nigeria MPI (2022) has four dimensions: health, education, living standards, and work and shocks. The number of indicators, and their ambition, have increased. Security shocks were raised in consultations and have been added to the work dimension, which also now includes underemployment. Food security and time to healthcare have been added to the health dimension. School lag has been added to the education dimension as a proxy for quality, and water reliability added to living standards.

The Nigeria MPI (2022) also has a linked Child MPI. This Child MPI extends the Nigeria MPI to include appropriate indicators for children under 5, by adding a fifth dimension of child survival and development. This additional dimension contains eight vital aspects of early childhood development in physical and cognitive domains—including severe undernutrition, immunisation, intellectually stimulating activities, and preschool. While it does not offer individual-level data, it uncovers additional children who according to the extra dimension should qualify as multidimensionally poor.

Sampling

Sampling Procedure

SAMPLE DESIGN - FRAME:

- The National frame of Enumeration Areas (EAs) newly demarcated for the forth coming Housing and Population Census by the Population Commission will be used to select the study units.
- A household listing exercise will be carried out in all the selected EAs to be studied. This will provide updated sampling frame from which households will be selected for interview.

SAMPLE DESIGN - SIZE:

- One hundred and two (102) enumeration areas were selected in each State.
- Thirty-four (34) EAs were selected per senatorial district in 36 states; the remaining EAs were located in the FCT.
- A total of 3,774 EAs were covered across the 774 LGAs and 109 senatorial districts.
- 15 Households were interviewed in each selected EA, given a total of 1530 HHs (15HHs*102EAs) that were covered in each state. Subsequently, a total of 56,610 HHs were covered nationally

Deviations from Sample Design

No Deviations

Response Rate

In total, 56,610 households were selected for faceto-face interviews, of which 53,415 interviews were covered and 52,022 were completed, giving a response rate of 91.9%.

Weighting

Population and sample weight were calculated from the household data files

Questionnaires

Overview

The questionnaires for the MPI 2021 was a structured questionnaire . A household questionnaire was administered in each household, which collected various information on Identification, Demographic Characteristics, Economy Activity, Disability, Death in the last 12 months, Anthropometry/Child Nutrition, Food Security, Federal Government Cash Transfer, Health and Safety.

Some of the questions were administered at household level while others were at individual level.

DATA COLLECTION NOTES

The pre-test and training of field staff took place in September 2021. Piloting occurred in four States—two from northern Nigeria (Kano and Plateau) and two from southern Nigeria (Akwa Ibom and Lagos). Two teams were constituted for each State, comprising a supervisor and four enumerators, resulting in 40 enumerators in total for the pre-test. For the main survey, training of field staff took place in November 2021 in 36 States and FCT Abuja. Four teams were constituted in each State, comprising a supervisor, three enumerators and one measurer, resulting in 740 enumerators in total.

SUPERVISION

The interviewing was conducted by teams of interviewers. Each interviewing team comprised of a Supervisor, Measurer, team mates and a driver.

Data Processing

Data Editing

Real - Time data editing took place at a number of stages throughout the processing, including:

- 1) Data editing and cleaning
- 2) Structure checking and completeness
- 3) Secondary editing
- 4) Structural checking of SPSS data files

Detailed documentation of the editing of data can be found in the Data processing guidelines.

Other Processing

Face-to-face interviews were conducted using the Census and Survey Processing System (CSPRO) and computer-assisted personal interviewing (CAPI) data entry. As well as field supervision of the enumeration teams, a team responsible for data quality protocols was established for real-time online data checks, comprising:

- A data administrator who ensured the connectivity of the CAPI devices to the server and monitored downloading and uploading of data to and from enumerators in the field.
- Eighteen data editors, each responsible for two States, who checked for any errors in the data downloaded from the server and communicated any corrections or clarifications to the enumerators.
- A data cleaning team who cleaned the data in CSPRO and Stata prior to its analysis.

Data Appraisal

Estimates of Sampling Error

The range within which we can say with 95% certainty that the true value falls, interval considering sampling errors.

Other forms of Data Appraisal

A series of data quality tables and graphs are available in the reports.
